192 persons, 12 of whom, chiefly farm workers, were going to employment at points in Alberta, and 69 to farms in Saskatchewan. The offices at Nelson, Prince George, Prince Rupert and Vancouver, sent 65 bushmen to camps within the province, a few farm labourers to the Okanagan district, and 21 miners to points near Vancouver. The remaining transfers were of engineers, waitresses

and housekeepers, going to various points within the Vancouver zone.

Of the 1,760 workers benefitting by the Employment Service reduced rate, 671 were carried by the Canadian Pacific Railway, 1,024 by the Canadian National-Grand Trunk Railways, 61 by the Temiskaming and Northern Ontario Railway, and 4 by the Pacific Great Eastern Railway.

---

### BUILDING PERMITS ISSUED DURING MARCH, 1923.

ACCORDING to reports tabulated by the Dominion Bureau of Statistics, the value of building permits issued by 56 cities during March was substantially higher than in the preceding month, but there was a decline as compared with the same period of last year. This decrease may be partly owing to the unusually severe weather that prevailed generally during March, which retarded building operations to some extent. The aggregate value of the building authorized by these centres was \$8,544,228 in comparison with totals of \$4,744,478 in February, 1923, and \$9,472,596 in March, 1922. There was, therefore, an increase of \$3,799,750 or 80.1 per cent in the former comparison and a decrease of \$928,368 or 9.8 per cent in the latter.

Detailed statements were furnished by 45 cities which showed that they had issued approximately 1,200 permits for dwellings at a valuation of \$3,987,056. In many cases the construction of a number of dwellings was authorized by the granting of a single permit. The value of the permits granted for other buildings (including garages, stores, stables, factories, etc.) of which some 1,650 were issued, reached a total of \$4,358,700. Seven cities gave only the value of the building authorized without attempting to classify the permits,

while four centres registered no permits during the month.

In comparison with the returns for the preceding month, all provinces except Saskatchewan reported substantial increases in the value of building anticipated. The largest actual gains occurred in Quebec and Ontario; in the former the total for March was \$1,632,415 or 330.4 per cent higher than in February and in the latter it was \$1,660,327 or 50.7 per cent higher. The decline in Saskatchewan was comparatively small, being only 9.2 per cent.

The value of prospective building in all provinces except Quebec was smaller than in March, 1922. The most pronounced decrease was reported in Ontario, where the permits issued declined by \$1,391,263 or 22 per cent as compared with the corresponding month of last year. In Quebec there was an increase in that comparison of \$849,365 or 66.5 per cent.

An analysis of the returns by cities shows that Montreal, Toronto and Vancouver reported increases in the value of building authorized as compared with both February, 1923, and March, 1922. In Winnipeg there was a gain in the former comparison but a reduction in the latter. Of the smaller centres, Guelph, Kingston, London, Stratford,

Woodstock, Regina and Nanaimo registered increases in both comparisons.

The following table shows the value of the building permits issued during

March as compared with February, 1923, and March, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS.

## FAIR WAGE CONTRACTS, APRIL, 1923

**D**URING April, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to three fair wage contracts, all of which were awarded by the Department of Public Works. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents abuses and secures

the legitimate rights of the labour employed.

A statement was also received as to the supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS.

Dredging the entrance channel, basin and cribseats for proposed breakwater, Matane, Que. Name of contractor, Horace Dussault & Co., Quebec,

Que. Date of contract, April 5, 1923. Amount of contract, Class "B" 37 cents per cubic yard (place measure).

Extension to wharf, Grand River, Gaspé County, Que. Name of contractor, M. Bernatchez and George E. Fournier, Montmagny, Que. Date of contract, March 27, 1923. Amount of contract, unit prices.

Construction of wharf, Fanny Bay, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, March 27, 1923. Amount of contract, unit prices.

#### POST OFFICE DEPARTMENT.

The following is a statement of payments made in April for supplies ordered by the Post Office Department

subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
Making metal dating stamps and type, and other hand stamps and brass crown seals.....	\$ 791.13
Making and repairing rubber stamps, daters, etc.....	230.74
Making up and supplying letter carriers' uniforms, etc.....	11,653.12
Supplying mail bag fittings.....	455.25
Repairing scales.....	300.30
Making and supplying mail clerks' tin boxes.....	158.25
Repairing boxes and hampers, etc.....	65.00
Supplying ink.....	100.00

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES.

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Mining, non-ferrous smelting, and quarrying

SLOCAN MINING DISTRICT, B.C.—CERTAIN MINING COMPANIES OPERATING IN

THE SLOCAN, AND INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS. New wage scale, effective April 1, 1923.

Wages per day—*Mine work*: Miners, \$5; timber men, blacksmiths, steam compressor men, \$5.50; timber men's helpers, blacksmiths' helpers, compressor men (other than steam), \$5; muckers, \$4.50; carpenters, \$6; mule drivers (underground), \$5; teamsters, tram operators (head end), \$5.50; brakeman on mule train, common labour, \$4.50. *Mill work*: Jigmen, \$5.50; tablemen, flotation men, \$5; rollmen, crushermen, common labour, \$4.50; repair men, \$6; repair men's helpers, \$5; carpenters, \$6.

This agreement as to wages was reached after several conferences held under the terms of the agreement of May 12, 1920.

#### Manufacturing: Clothing.

TORONTO, ONT.—CERTAIN EMPLOYING FIRMS AND THE JOURNEYMEN TAILORS' UNION OF AMERICA No. 132. Agreement to be in effect as from April 2, 1923, and subject to change on 15 days' notice

prior to September 15 or March 15 in any year.

Minimum Wages: Per hour—tailors, 85 cents; pant and vest makers, 60 cents; 1st class helper, 50 cents; 2nd class helper, 40 cents; bushmen same rate as tailors.

Hours per week, forty-four, four hours on Saturday. Overtime, time and one-half. Holidays, double time.

All work to be as equally divided as possible in slack season. No employee to be discharged during slack season through lack of work. No reduction to be made in the wages of any employee who may be receiving more than the above scale. All shop equipment to be furnished by the employer.

#### Manufacturing: Printing and Publishing.

MOOSE JAW.—CERTAIN EMPLOYEES AND MOOSE JAW TYPOGRAPHICAL UNION No. 627. Agreement to be in effect from November 1, 1922 to October 31, 1923, and from year to year unless 60 days' notice is given.

Only good standing members of the union to be employed as mechanics and workmen in the composing rooms and proof rooms and departments of establishments under the agreement.

A joint standing committee to decide on questions about scale of prices and disputes regarding clauses of the agreement or any question of difference.

Wages: Per hour, November 1, 1922 to October 31, 1923: newspaper workers—day work, 91  $\frac{2}{3}$  cents; night work, \$1.04 $\frac{1}{2}$ . 48 hours per week for day work, 45 hours for night work. Book and job printers, same wages per hour as newspaper workers; 44 hours per week for day or night work. Men on middle shift (7 $\frac{1}{2}$  hours per shift) to receive same rate of pay as for night. Foremen, 50 cents per shift above scale.

Any office running four machines, to employ a machine tender. When two operators are employed (and no ma-

chinist) there must be at least one machinist-operator.

Not more than eight hours to constitute a day's work, with four hours on Saturday for book and job printers. Not more than seven and one-half hours to constitute a night's work.

Overtime not exceeding three hours in one day, time and one-half. In excess of three hours, double time. Work performed on holidays, time and one-half—this not to apply to night shifts of morning papers or night staffs of afternoon papers published every week day. Work done during lunch hour to be overtime. Sunday work, double price, except night staffs of morning papers or of afternoon papers during regular hours of the shift.

Machine apprentices: One learner to four machines or major fraction thereof, same to be a journeyman member of the union—this is exclusive of apprentice members who are serving the last six months of their apprenticeship. Term of apprenticeship for beginner on type-setting and typecasting machines to be thirteen weeks. Scale, per day—first three weeks, \$2.80; thereafter an increase of \$1 each week for the next ten weeks with a set standard of speed to be reached in 13 weeks, with if necessary an extension of time up to three months to attain the same, at \$4.50 per day. Night work, 25 cents in excess of above. A learner not to work overtime unless no journeyman is available, when he shall receive time and one-half.

Apprentices: One apprentice to every five journeymen or major fraction thereof, no apprentice to be employed on overtime unless all the journeymen in the same office are also employed on the same shift. No youth under the age of 15 to be accepted as an apprentice. Applicants to be eligible must have elementary education. Foremen to afford apprentices every opportunity to learn the trade. Apprentices to be registered by the union. Wages of apprentices: Per week—third year, \$16; fourth year, \$20.50; fifth year, \$26.25 and \$31; night

work, \$2 extra per week. Hours, same as those of journeymen. Apprentices on book and job work, per week—during third year, \$14.50; fourth year, \$19.25; fifth year, \$24.25 and \$28; night work, \$2 extra per week. Hours, same as those of journeymen.

#### Construction: Buildings and Structures.

OTTAWA.—ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRY (OTTAWA BRANCH) AND OTTAWA DISTRICT COUNCIL OF THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA. Agreement to be in effect from May 1, 1923, until April 30, 1924, four months' notice of change or expiration to be given.

Hours per day, eight, with four on Saturdays. Overtime until 10 p.m., time and one-half. Thereafter, Saturday afternoons, and holidays, double time. No work on Labour Day except to save life or property.

Minimum wage, per hour, 75 cents.

Parties to the agreement agree to establish an industrial council of five members from each party and an independent chairman, to settle disputes.

Union representatives to be allowed access to all jobs to confer with the shop steward.

Employees discharged to be paid within one hour, and thereafter, if waiting on the job, to be paid waiting time at regular rate.

Both parties agree to enforce the national apprentice system.

Union members to be given preference of employment, all things being equal.

CALGARY, ALBERTA.—CALGARY CONTRACTORS' ASSOCIATION AND CALGARY CARPENTERS' DISTRICT COUNCIL. Agreement to be in effect from May 1, 1923, until April 30, 1924.

Minimum wage, per hour, 80 cents.

Hours per day, eight, with four on Saturdays. Night shift to be seven hours

with eight hours' pay. Overtime until midnight, and until 5 p.m. Saturdays, time and one-half. Thereafter, and Sundays and holidays, double time. Work on Labour Day only to save life or property. Employer to provide for locking up of carpenters' tools on the job. Employees to be paid if kept waiting for wages. One hour's notice to be given of dismissal or leaving work.

No union member to work for anyone outside the association for less than 80 cents.

A new agreement to be negotiated during January, 1924, and notification of any changes to be given during the first week in January. Disputes to be referred to arbitration.

REGINA, SASK.—EMPLOYING PLUMBERS, AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS No. 179. Agreement in effect since July 7, 1921 renewed as from May 1, 1923, to May 1, 1925.

Hours of labour: eight per day; four on Saturdays. Overtime, until midnight, time and one-half; thereafter and Sundays and holidays, double time.

Minimum wage, per hour, 90 cents. No employees to work for any but registered employing plumbers. Only union members to be employed.

All employees to be covered by insurance as per provincial act.

Only one apprentice to three journeymen, no fitter to have more than one helper. Grievances to be referred to a joint committee which will meet within 48 hours and have power to settle grievance.

#### Transportation and Public Utilities.

WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC RAILWAY COMPANY AND MOTORMEN AND CONDUCTORS. Agreement as synopsized in the LABOUR GAZETTE for July, 1922, on page 781, to remain in effect from May 1, 1923 until April 30, 1924.

EDMONTON, ALBERTA. — CITY OF EDMONTON AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL 569. The agreement for 1922 was summarized in the LABOUR GAZETTE for March, 1922, on pages 335-336. For subsequent changes see under "Service—Public and Municipal" in this issue.

EDMONTON, ALBERTA. — CORPORATION OF THE CITY OF EDMONTON AND THE CANADIAN ELECTRICAL TRADES UNION (TELEPHONE, LIGHT AND POWER, AND STREET RAILWAY ELECTRICAL EMPLOYEES). Agreement to be in effect from March 22, 1923 until December 31, 1923, and from year to year thereafter or until a new agreement is negotiated between the parties. Proposed changes to be discussed during the last half of December of any year.

Hours of duty—Hourly employees—eight per day, with four on Saturdays. Where the requirements of the service demand shift, nine hours with one hour off for lunch to constitute a day. Assignments to shift work to be made for not less than six days. Monthly employees—Hours per day eight, with shift work if required, nine hours as above. In event of legislation requiring a 44 hour week, for all employees, the department to adopt suitable hours.

Overtime on basis of 8 hours per day for daily men and 26 days per month for monthly men. Overtime from 5 p.m. to 10 p.m. and Saturday afternoons, time and one-half. From 10 p.m. to 8 a.m. and Sundays and holidays, double time. Certain legal holidays to be recognized.

Monthly employees after one year, two weeks' vacation with pay each year. When a legal holiday falls during a period of vacation, equal time off to be granted as service conditions permit. Hourly employees, after one year, one week's vacation on full pay, and two weeks each year thereafter. An employee on permanent work substituting for a night employee to be paid double time. An hourly employee released from

duty to receive one-half day's pay after at least two hours' work and a full day's pay after at least six hours. Employees to go to and from duty in their own time. Employees to give two weeks' notice of resignation. Employers to give two weeks' notice of dismissal. Increases and promotions to be granted in one year periods when warranted by ability. Preference of employment to be given to those of British nationality. A permanent employee on satisfactory proof may have two weeks' sick leave with pay, or more in exceptional circumstances. This clause to remain in force until a sick insurance clause is operative. No discrimination against employees for being or not being members of any organization.

In reduction of staff the man employed last to be the first laid off, and the last man laid off to be given preference in case of re-employment. Vacancies to be filled by promotion, except in case of a superintendent or head of a department, when this shall not be binding if no suitable man can be found.

- Grievances to be referred to a committee of employees or a committee of the union, who may appeal to the superintendent, and if case is not settled satisfactorily appeal may be made to the City Commissioners and Council and further, to a Board of Conciliation.

*Telephone Employees:* Credit to be given for previous experience — full credit for same branch of work, and half time credit for a different branch. Night service men in main exchange, four nights off each month. Apprentices on night duty at south exchange, two nights off each month. A monthly employee to be allowed equal time off for Sunday work, but work on more than one Sunday in two not to be required on this basis. Additional Sundays and holidays to be double time in addition to monthly pay. No other overtime to monthly employees except in special P. B. X. work or in case of unavoidable work on alterations.

Salary and Wage Schedule, per month—on switches, apprentices, \$80, \$90 and \$105; journeymen, \$134, \$153 and \$172. Employees under 18 years of age on switch and service work \$60 per month for three months, then \$70 per month until the age of 18 years is reached. Employees over 18 years to serve for first six months of apprenticeship at \$70 per month.

*Servicemen and rackmen*, per month—over 20 years of age, \$105, \$134, \$143, and \$158; 18 years, \$80; 19 years, \$90.

*Inspectors*, \$134, \$143 and \$158. Inspectors on P. B. X. work to serve a probation period of six months at \$158 per month; thereafter, \$167 per month. Night servicemen, main exchange, \$110, \$120 and \$129; apprentice, south exchange, on night duty, \$15 extra per month. Night service man, south exchange, \$95 per month.

*Shop Mechanics*: per hour, 48 cents, 57½ cents and 67 cents. *Installers and linemen*: apprentices 43 cents and 52½ cents; journeymen, 61 cents, 71½ cents and 81 cents; sub foreman, 86 cents. *Cable splicers*: apprentices, 67 cents, 76½ cents and 86 cents. Cable splicers' helpers, 57½ cents, journeymen, 95½ cents, cable foreman, \$1.05.

*Light, power and street railway electrical employees*: An employee not to be classed as a foreman until after four years in one or more branches of the electrical trade.

An apprentice to be one who has worked six months at some branch of the trade. Apprentices to serve four years, and during last twelve months to do if required same class of work as journeymen in gangs, but not to be required to work on high voltage wires except under supervision of a journeyman line-man. Not more than one apprentice to

be employed to three journeymen. Time of work on poles, towers, etc., of an elevation of ninety feet or more to be paid as double time.

Wages per hour—*Line construction and maintenance*: foreman lineman, 92 cents; journeyman, 84 cents; apprentices, 57 cents; 64 cents; 70 cents; 76½ cents. *Meter section*: meter installer and meter inspector and repairman, 84 cents. *Street light section*: maintenance and patrolmen, per month, \$110, \$120 and \$130; journeymen repairmen, \$161; wiring inspector, \$171; car wiring and trouble men, 84 cents per hour; armature winders, 84 cents. Power house operators, \$146-\$152 per month.

MONTREAL, QUE.—HARBOUR COMMISSIONERS OF MONTREAL AND THE HARBOUR UNION OF MONTREAL. Agreement to be in effect from May 1, 1923 until May 1, 1924.

Wages per hour—*Elevator*: chief weighman, 62 cents; millwright, 60 cents; assistant millwright, weighmen, distributors, auto scale men, trippermen, 55 cents; machinery men, feed tenders, marine leg men, tower men, 50 cents; carpenters, 47 cents; bin sweeper, oilers, firemen and helpers, and spoutmen, 45 cents; labourers, 34 cents. *Shovellers and baggers*: foreman shoveller, 58 cents; foreman bagger, 55 cents; shovelers, 48 cents; sewers and scalemen and baggers, 45 cents. *Conveyor system*: assistant foreman, 55 cents; millwright, 60 cents; rope splicer, 55 cents; feed tenders, main tower men, 50 cents; conveyormen, 45 cents; labourers, 34 cents.

In case of one or more shifts, all labour employed over ten hours to be paid for at time and one-half. Emergency work on Sundays and certain holidays, time and one-half. Day and night watchmen not to be entitled to overtime for Sundays or holidays.

### Service—Public and Municipal

EDMONTON, ALBERTA.—CITY OF EDMONTON AND THE EDMONTON CIVIC EMPLOYEES' FEDERATION REPRESENTING THE FOLLOWING TRADE UNION LOCALS: CIVIC EMPLOYEES' FEDERAL UNION No. 30; CIVIC SERVICE UNION No. 52; INTERNATIONAL BROTHERHOOD OF STEAM SHOVEL AND DREDGEMEN No. 55; CITY OF EDMONTON POLICEMEN'S ASSOCIATION No. 74; CITY FIRE FIGHTERS' UNION No. 209; AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES, No. 569; INTERNATIONAL ASSOCIATION OF MACHINISTS No. 817; INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS No. 857; UNITED BROTHERHOOD OF CARPENTERS AND JOINERS. Agreement to be in effect from March 22, 1923, until December 31, 1923.

This agreement was summarized in the LABOUR GAZETTE for March, 1922, pages 338-341, as in effect for 1922. It was modified slightly for the current year, the principal change in the general conditions being as follows:

A clause was added to the general conditions whereby all vacancies in any department and new positions of a permanent nature should be posted in the department affected at least three days before the filling of positions.

*Civic Employees Federal Union Local No. 30:* The rate of \$5.40 per day for sewer inspectors has been changed to 79 cents per hour for sewer and water inspectors. A minimum rate of 60 cents per hour for truck drivers has been added to the schedule.

Night work of men not having worked during the day is to be paid on straight time and overtime basis the same as day work.

*Civic Service Union Local No. 52:* A minimum wage for juniors in fourth year has been added of \$100 per month, and one of \$96 per month for experienced fourth year telephone operators.

Under "vacation leave" there is an additional provision whereby "employees regularly working on legal holidays will be allowed time off as and when the head of the department can arrange for same."

*City of Edmonton Policemen's Association Local No. 74:* Wages per month of sergeants, \$153.

*Steam Shovel and Dredgemen Local No. 55:* No change.

*Edmonton City Fire Fighters' Union No. 209:* Day and night shifts to be ten and fourteen hours respectively.

*Amalgamated Association of Street and Electric Railway Employees, Local Division No. 569:* Under "wages of barn men" some classes have been added—car wirers (first year after promotion from position of car repairer), 75 cents per hour; electric welder, 77 cents per hour; car wiring, controller men, armature winders, 84 cents per hour.

There is a provision added that barn be furnished with three sheepskin coats, slickers, and pairs of rubber boots for emergency work, and one that all cable and car wiring and testing other than ordinary repairs and emergency work shall be done by car wiremen.

*International Association of Machinists No. 817; International Union of Steam and Operating Engineers No. 857, and United Brotherhood of Carpenters and Joiners.* These schedules are practically unchanged.

## RECENT CHANGES IN WAGES AND HOURS OF LABOUR.

---

THE following is a statement by industrial groups of the more important changes in rates of wages and hours of labour reported to the Department in recent months.

As noted in the January issue of the LABOUR GAZETTE, the Department issued in December, 1922, a bulletin on Rates of Wages and Hours of Labour in Canada, 1921 and 1922, the fourth report in a series on wages and hours of labour in Canada. This bulletin gave statistics of wages and hours in approximately 50 cities for the building, metal and printing trades, for electric railways and also in factories and lumbering, on steam railways, and in coal mines.

**COAL MINING.**—*Vancouver Island.* In accordance with the arrangement made at the end of 1918 for the quarterly adjustment of wages of all underground, surface, clerical and office employees by the Cost of Living Commission for the Vancouver Island Coal Operators and their employees, during recent months, wages have been adjusted as follows: Where base rate is \$3 per day: on August 1, 1922, a decrease of 13/4 cents per day; on November 1, 1922, a decrease of 15 1/2 cents per day; on February 1, 1923, an increase of 4 cents per day; on May 1, 1923, an increase of 7 cents per day. Where base rate is \$3.15 per day: on August 1, 1922, a decrease of 2 cents per day; on November 1, 1922, a decrease of 16 cents per day; on February 1, 1923, an increase of 4 1/2 cents per day and on May 1, 1923, an increase of 7 cents per day.

*Southern Alberta and South Eastern British Columbia.* Under an agreement entered into on August 23, 1922, between the Western Canada Coal Operators' Association and District 18 of the United Mine Workers of America in settlement of a strike in progress from April 1, 1922, the rates of pay in effect

from October 1920 to March 31, 1922, were restored on September 1, a scale 15 per cent lower being provided for from August 27 to August 30.

*Nova Scotia.* Wages of coal miners in the principal mines were reduced about 25 per cent from January 1, 1922. There were disputes regarding the cut which finally led to a strike on August 15. An agreement during that month was retroactive to July 15 and thereby contract rates were increased 12 1/2 per cent, increasing the minimum day rate to \$3.25 and other day rates 40 cents per day in some mines and 52 cents per day in others.

**MINING, OTHER THAN COAL.**—*Slocan District, B.C.* Under the terms of an agreement entered into in 1920 providing for changes in wages periodically according to the price of copper, metal miners in the Slocan District were granted a new wage scale which included the addition of a 50 cent bonus for all classes, effective as from April 1, 1923.

*Thetford Mines, Que.* Daily wages of asbestos miners in the locality of Thetford Mines were increased from \$2.50 to \$3.00, effective April 1, 1923.

**BUILDING AND CONSTRUCTION.**—*Halifax, N.S.* Wages of bricklayers were increased as from May 1 from 75 to 90 cents per hour.

*Quebec, Que.* Wages of plumbers and steamfitters were increased as from May 1 from 50-55 cents to 50-60 cents per hour, 50 hours per week; roofers from 50 cents to 50-60 cents per hour, 50 hours per week; bricklayers from 75 cents to 90 cents; stonemasons from 65 cents to 90 cents per hour, and hours for both classes were reduced from 50 per week to 44. The rate for carpenters was increased from 55 cents to 60 cents, 50 hours per week, to be effective from June 1.

*Montreal, Que.* Wages for plasterers were increased from 90 cents to \$1 per hour as from May 1, 44 hours per week. Wages of bricklayers were increased from 90 cents to \$1 per hour, as from May 15, hours per week ranging between 50 and 44. Wages of carpenters are being increased from 50-65 cents to 65-80 cents per hour, and hours in some cases reduced from 50 to 44 per week. As from May 1, wages of plumbers and steamfitters were increased from 70 cents to 75 cents, hours per week ranging between 50 and 44; rates for painters were increased from 60 cents to 65 cents, hours per week, 50; for stationary engineers from 50 cents to 60 cents per hour, and hours per week reduced from 60 to 50; wages of labourers were increased from 30 to 35 cents, hours per week, 60; wages of building labourers were increased from 40 cents to 50 cents, hours per week, 50; wages of tinsmiths were increased from 60 to 65 cents, hours per week, 50.

*Ontario.* Wages of bricklayers at Kingston were increased from 85 to 90 cents as from April 1. Wages of bricklayers, masons, plasterers, stonecutters and marble and tile setters at Ottawa were increased from 85 cents to one dollar. Carpenters' wages at Ottawa were increased from 70 cents to 75 cents from May 1; wages of builders labourers remained unchanged at 45 cents. Bricklayers' wages at Brantford and Hamilton were increased from 90 cents to one dollar per hour for the season. At Toronto bricklayers' wages remained at one dollar. Wages of carpenters at St. Catharines were increased to 85 cents from 75 cents, effective on May 1.

**MANUFACTURING.**—Increases of about 10 per cent in wages were effected in the principal plants manufacturing iron and steel during March and April. Wages of workers in the textile industries in certain districts were increased 12½ per cent at the end of April. Under an

agreement between a number of pulp and paper manufacturers in Canada and the United States, and various international unions representing the employees, wages of employees of several paper companies in Canada were increased as from May 1, skilled labour being given a flat increase of 5 cents per hour, and in some cases the minimum rate for common labour being fixed at 40 cents per hour. A number of other companies made similar increases in wages.

**SERVICE, PUBLIC AND MUNICIPAL.**—*Saskatoon, Sask.* Wages of civic employees for 1923 were reduced 3 per cent as from January 1, 1923, a settlement having been reached with the various classes of employees, excepting the street railway men, on April 9.

*Calgary, Alta.* Effective May 15, wages of permanent labourers were reduced from 55 to 52½ cents per hour and of casual labourers from 55 to 50 cents; wages of carpenters and machinists were reduced from 82 cents per hour to 80 cents. There were also some changes in overtime rates.

*British Columbia.* The Provincial Government increased the salaries of some 300 junior members of the Provincial Civil Service by from \$2.50 to \$5.00 per month, those of 2½ years or more service being raised to a minimum of \$75 per month.

**TRANSPORTATION: STEAM RAILWAY.**—The wages of maintenance of way employees and shop labourers which had been cut down 40 cents to 35 cents per hour in July, 1922, were increased by agreement to 37 cents per hour as from November 1, 1922. Wages of shop crafts employees of the principal railways were reduced as follows by an agreement reached on December 6, 1922 (the reductions having been tentatively in effect as from August 16): machinists, boilermakers, etc., reduced from 77 to 70 cents; carpenters and car repairers

from 72 to 65 cents; freight carmen reduced from 72 cents to 63 cents; apprentices and helpers reduced from 54 to 47 cents; car cleaners, from 42 cents per hour to 37 cents.

The rates of pay for clerical and station employees of various railroads in force from July, 1921, to July, 1922, were reduced approximately \$2 per

month in December, 1922, and January, 1923.

TRANSPORTATION: ELECTRIC RAILWAY. *Calgary, Alta.* Wages per hour of a number of classes of shopmen, barnmen and track maintenance men in the municipal street railway department have been reduced by from 2 to 3 cents per hour for 1923.

---

### PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1923.

THE movement in prices as indicated by the index number of wholesale prices continued upward in spite of a sharp seasonal decline in dairy products, while the family budget in terms of retail prices at the beginning of April was somewhat lower than in March due chiefly to a seasonal decline in the price of eggs.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.64 at the beginning of April as compared with \$10.79 for March; \$10.26 for April, 1922; \$12.68 for April, 1921; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. The total for food, fuel, and rent averaged \$21.21 at the beginning of April as compared with \$21.41 for March; \$20.66 for April, 1922; \$23.31 for April, 1921; \$26.92 for July, 1920 (the peak); and \$14.32 for April, 1914. The most important decline was in eggs which showed a net fall of 26c for the two dozen included in the budget. Smaller declines occurred in veal, pork, bacon, lard, bread, and prunes. The most important advances were in butter, cheese, and sugar, and smaller increases in mutton, flour, beans, and tea. Fuel and rent were slightly lower.

In wholesale prices the Departmental index number stood at 227.4 as compared with 226.0 in March; 225.0 in April, 1922; 253.7 in April, 1921; 356.6 in May, 1920 (the peak); and 136.7 in

April, 1914. In farm products, grains and fodder advanced substantially, while dairy products were much lower due to seasonal declines in butter and eggs. Important advances also occurred in building materials, iron and steel, and in raw furs, while livestock and meats and miscellaneous groceries showed smaller advances. Besides the decline in dairy products, textiles, some metals, fuel and lighting, and chemicals were slightly lower. Compared with a year ago grains and fodders, animals and meats, fish, fruits and vegetables, house furnishings, drugs and chemicals, and sundries were lower. All other groups were higher. The most important advances during the month were in western grains, corn, bran and shorts, sugar, cotton fabrics, pig iron, steel billets, lumber, linseed oil, and raw furs, with smaller advances in western cattle, sheep, oranges, flour, copper, lead, and nickel, and in furniture. The principal declines occurred in butter and eggs, raw cotton, and jute, with less important declines in fowl, lemons, coffee, antimony, bar silver, spelter, and in raw rubber.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices for the several commodities in relation to the average prices for the base period, 1890-1899, these being, therefore, made equal to 100. The quotations for most farm products are obtained weekly and

averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Departmental list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, declined slightly to 155.9 in April as compared with 156.2 in March; 155.2 in February; 147.8 in April, 1922; 164.9 in April, 1921; 249.8 in April, 1920; and 101.0 in April, 1914. The decline was due mostly to the decrease in dairy products. Only nine commodities were lower than in March, while sixteen were higher.

The Canadian Bank of Commerce index numbers of both imports and exports were lower, the former at 167.05 for mid-April as compared with 172.69 the previous month and the latter at 152.57 in April as compared with 154.24 in March. The combined index of both imports and exports fell from 163.46 at the middle of March to 159.81 at the middle of April.

Professor Michell's revised index number of wholesale prices in Canada from 1919 to date based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, declined to 176.2 in April as compared with 179.2 in March; 176.3 in February; 171.9 in January; and 161.2 in April, 1922.

The table of retail prices and rentals shows the prices at the beginning of April of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the

quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost

of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices.

Beef, sirloin steak, averaged slightly lower at 27.3c per pound in April as compared with 27.5c in March. Advances, however, occurred in Nova Scotia, New Brunswick, Manitoba, and Alberta. Round steak also was slightly lower in the average at 22.4c per pound. Rib roast declined in the average from 20.9c per pound in March to 20.7c in April. Stewing beef was up slightly from 11.3c per pound to 11.4c. Veal was down from 18.5c per pound in March to 17.9c in April. The decline was general in all provinces except Saskatchewan and British Columbia, which averaged slightly higher. Mutton advanced in the average from 27.6c per pound to 28.1c, but was slightly lower in Nova Scotia. Fresh pork, roast, averaged slightly lower at 26c per pound. The western provinces, however, showed some increases. Mess pork was down in the average from 25.7c per pound to 25.3c. Bacon also was slightly lower at 40c per pound. Boiled ham declined in the average from 59.8c per pound to 59.2c. Among fresh fish, halibut was slightly lower. Salt herrings declined from 13.3c per pound to 12.9c. Finnan haddie and canned salmon were unchanged. Lard declined slightly in the average from 22.8c per pound to 22.5c.

Eggs continued to decline, fresh averaging 36.3c in April as compared with 53.3c in March and 63.3c in Jan-

uary, and storage averaging 31.7c in April as compared with 41.9c in March and 46.6c in January. Milk was slightly lower at Brockville and Edmonton and advanced somewhat at Medicine Hat. Dairy butter averaged 48.3c per pound in April as compared with 45.8c in March, 41.2c in February, and 40.5c in January. Nearly all localities were higher. Creamery butter averaged 55.3c in April as compared with 53.5c in March, 47.2c in February, and 45.5c in January, and showed about the same general advances as dairy butter. Cheese was up from 34.3c in the average to 35.8c.

Bread was slightly lower at 6.7c per pound. Soda biscuits advanced slightly to 18c per pound. Flour was up in the average from 4.4c per pound to 4.5c. Rolled oats and rice were steady. Tapioca rose from 12.5c per pound to 12.8c. Canned vegetables were unchanged. Beans advanced from 8.5c per pound to 8.7c. Potatoes averaged \$1.21 per ninety pounds in April as compared with \$1.23 in March. Evaporated apples were down from 21c per pound in March to 20.6c in April. Prunes also showed a small decline from 19.2c per pound to 18.8c. Raisins and currants were slightly lower. Raspberry jam and canned peaches were steady. Granulated sugar was up from 11.4c per pound in the average to 12c, nearly all localities showing increases. Yellow sugar showed about the same general advance as granulated. Coffee was steady, while tea advanced in the average from 61.9c per pound to 64.4c. Vinegar was down slightly at 15.3c per quart. Cream of tartar declined in the average from 71.5c per pound to 70.5c. Laundry starch was slightly higher.

Anthracite coal averaged \$18.52 per ton as compared with 18.88 in March. Decreases occurred at St. John, N.B., Sorel, Belleville, Orillia, Hamilton, London, and Regina, and advances at Brockville and St. Catharines. Bituminous coal averaged slightly lower in April at \$11.87 per ton as compared with \$11.94 in March. Hard wood, four feet

long, averaged \$12.79 per cord in April and \$12.77 in March, most of the localities showing little change. Soft wood showed little change in the average at \$9.52 per cord. Coal oil averaged 31.5c per gallon in April as compared with 31.4c in March. Rent averaged slightly lower, declines occurring in Halifax and Calgary.

#### Wholesale Prices.

GRAINS AND FODDER.—Wheat, No. 1 Manitoba Northern at Winnipeg, advanced from \$1.14 per bushel toward the end of March to \$1.21 toward the end of April. Ontario winter wheat at Toronto rose from \$1.16 per bushel to \$1.22. Western barley was 2c per bushel higher at 58c and western oats also were up from 51c to 53c per bushel about the middle of April and then declined again to 51c by the end of the month. American corn advanced from 89c per bushel to \$1.00. Flax seed rose from \$2.51 per bushel toward the end of March to \$2.94 about the middle of April and then declined to \$2.70. Rye advanced from 79c per bushel to 81c. Bran and shorts each advanced \$3 per ton, the former to \$29 and the latter to \$31 per ton.

ANIMALS AND MEATS.—Western cattle at Winnipeg rose from \$6.25 per hundred pounds to \$7. Best butcher steers at Toronto also advanced 75c per hundred pounds to \$7.50. Dressed beef was steady. Veal declined from 16c per pound to 14c. Hogs showed little change. Sheep advanced from \$8 per hundred pounds to \$9. Dressed turkeys were slightly lower at 38c per pound.

DAIRY PRODUCTS.—Creamery butter at Montreal, which had advanced to 53c about the beginning of March and then declined to 48c in the last week in March, showed a still further decline to 31c per pound by the end of April. Creamery butter at Toronto also declined sharply from 54c per pound early in April to 36c per pound toward the end. Dairy butter showed about the same decline as creamery and was quoted at 30c per pound toward the end

\*Preliminary figures. †Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915. ‡Revised.

of April. Fresh eggs at Montreal were quoted at 35c per dozen about the end of April as compared with 37c at the beginning and 48c at the beginning of March. Fresh eggs at Toronto advanced from 36c per dozen the last week in March to 39c about the middle of April and then declined to 36c. Milk was steady at Montreal and Victoria.

**FISH.**—The market for dried and pickled fish continued dull, and the demand for cod from the West Indies, South America, and Europe was reported to be very light. In canned lobsters not much improvement in the situation was reported.

**FRUITS AND VEGETABLES.**—Apples, No. 1 Spies, advanced \$1 per barrel, reaching \$9. Bananas at Toronto were slightly cheaper at 7c per pound. Lemons declined from \$5 per box to \$3.75. Oranges were up from \$3.75-\$5.80 per case to \$4.50-\$6.00. Potatoes at Montreal rose from \$1.05 per ninety pounds to \$1.30.

**MISCELLANEOUS FOODS.**—Rolled oats advanced from \$3.20 per ninety-pound bag to \$3.30. Spring wheat flour advanced 15c per barrel, reaching \$7.45. Coffee advanced slightly. Granulated sugar at Toronto was up from \$10.64 per hundred pounds to \$10.99. Glucose rose from \$3.70 per hundred pounds to \$4. Barbados molasses was up 3c per gallon to 86c. Maple sugar at Montreal was quoted at 20c-21c per pound.

**TEXTILES.**—Raw cotton at New York declined from 31.05c per pound to 28.75c. Cotton fabrics advanced from an average of 79.66c per pound to 84.52c. Other lines of manufactured cottons were steady. Jute fell from 9.78c per pound to 8.66c. Flax was steady.

**HIDES, LEATHER, BOOTS, AND SHOES.**—No changes were reported.

**METALS AND IMPLEMENTS.**—Pig iron advanced \$1 per ton to \$38.95. Black sheets were up from \$5.00-\$5.25 per hundred pounds to \$5.20-\$5.35. Wrought iron scrap advanced \$3 per ton to \$18.

Steel billets rose from \$43.50-\$47.50 per ton to \$46.50-\$53.00. Aluminum, copper, tin, and nickel were slightly higher while antimony and quicksilver declined somewhat. Bar silver at New York was 1c per ounce lower at 66 5/8c. Soldering coppers were up from 40c per pound to 41 1/2c.

**FUEL AND LIGHTING.**—Connellsville coke showed a further decline from \$7.25 per ton to \$6.60. Gasoline and coal oil were steady.

**BUILDING MATERIALS.**—Pine, good sidings, at Ottawa, advanced \$10 per M to \$140. Shipping culls were up \$3 per M to \$65 and box boards also were up \$3 per M to \$35. White pine laths advanced from \$11 per M to \$12. Spruce lumber was up \$2 per M to \$30. Red oak rose \$10 per M to \$140. Building paper was up slightly at \$1.15 per roll. Coal tar advanced from \$9 per barrel to \$9.25. Red lead rose from \$9.75-\$11.50 per hundred pounds to \$11.25-\$12.50. Heavy strap hinges rose from \$2.95 per dozen pairs to \$3.62. Copper wire was up from 19 3/8c per pound to 19 5/8c. Linseed oil and turpentine advanced, the former from \$1.16 per gallon to \$1.38 and the latter from \$2.25 to \$2.30. Window glass advanced twenty per cent.

**HOUSE FURNISHINGS.**—Furniture showed an advance, ranging from 5 per cent on some lines to 10 per cent on others, the greater increase being in goods containing glass.

**DRUGS AND CHEMICALS.**—Alum declined from 3 1/2c per pound to 3 1/4c. Bleaching powder was up from 2 1/2c per pound to 2 3/4c. Brimstone was down from \$3.50 per hundred pounds to \$3.25. Caustic soda was slightly lower at 4.4c per pound. Copperas declined from 1.5c per pound to 1.35c.

**MISCELLANEOUS.**—In raw furs, muskrat skins advanced from \$1.10-\$1.20 per skin to \$1.25-\$1.45. Malt was steady. Sulphite, news grade, was unchanged at \$65 per ton. Raw rubber at New York declined from 29c per pound to 27 3/4c.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

---

**T**HE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain.

**WHOLESALE PRICES.**—The Board of Trade index number for March (1913=100) showed an increase over the previous month's level of 1.7 per cent, reaching 160.3. In foods there was a total decrease of 1.7 per cent, cereals and meat and fish declining while "other foods" rose. In materials there was a total increase of 3.6 per cent. Iron and steel rose 8.5 per cent, other metals and minerals rose 7.2 per cent and cotton rose 1.5 per cent. Other textiles and the miscellaneous group declined slightly in price.

The *Statist* index number, in continuation of Sauerbeck's figures, was 132.7 at the end of March, or 0.6 per cent above the level at the end of February. In the foodstuffs division, vegetable food and animal food both declined slightly while sugar, coffee and tea rose 11 per cent, owing to high sugar prices. Materials rose 0.8 per cent, minerals and sundry materials showing increases, and textiles being 1.9 per cent lower on the month.

**COST OF LIVING.**—The index number of the Ministry of Labour showed a decline in the cost of living during March, particularly in foods, the latter due mainly to a reduction in the price of eggs. Fish and bacon and other items also fell in price, but cheese, sugar and tea were dearer. There was also a slight decline in the fuel and light group, due to a decrease in the price of gas.

At May 1, the index number of food was 162, a decrease of 6 points; rent was 145-150; clothing, fuel and light, and sundries showed no change from the previous month, and the cost of living dropped 4 points to 170.

### Bulgaria

**RETAIL PRICES.**—The index number of retail prices of 47 articles (foods, with certain items of fuel, soap and tobacco), 1901-10=100 has been revised slightly by a change in the figure for annual consumption of fuel oil. The revised figure for December was 3642.7, and the average for 1922 was 3471.6. The index for January, 1923, was 3678.7, an increase of one per cent for the month.

### Belgium

**WHOLESALE PRICES.**—The index number calculated by the Ministry of Industry and Labour (April, 1914=100) was 474 for February, an increase of 9 per cent for the month. All groups increased except clay products and tobacco, which showed no change.

**RETAIL PRICES.**—The index number for the kingdom compiled by the Ministry of Industry and Labour (April, 1914=100) was 408 for March, an increase of 2.8 per cent on the previous month. The weighted index of 30 foods declined 2 points to 434, following an increase in February of 11 points.

### Finland

**COST OF LIVING.**—The official cost of living index number of the "Socialministeriet" has been declining steadily since October and dropped 2 points or nearly 0.2 per cent in February from the January level. On the base July, 1914=100, foods were in February 1073.4; clothing, 1083.4; rent, 804.2; lighting and fuel, 1415.5; tobacco, 1294.0; newspapers, 1079.4; taxes, 2526.3; and all articles, 1130.8. During the month

under review, foods and clothing declined slightly and rent showed an increase.

### France

**WHOLESALE PRICES.**—The index number of the *Statistique Générale* (1901-10=100) was 490.2 for March, an increase of 0.5 per cent on the February level. This showed a falling off from the sharp rise which had been in progress almost without interruption since February, 1922, when the level was 354.2. For April, 1923, the preliminary figures show a decline of 2.2 per cent to 479.5. In March foods showed a slight decline, recorded in the animal foods group and in sugar, coffee and cocoa, while industrial materials rose 1.8 per cent although textiles declined slightly.

### Germany

**WHOLESALE PRICES.**—The peak of prices for the first four months of 1923 is shown by the index number of the *Frankfurter Zeitung* to have been reached in February. This was true also of the first three groups—food, textiles and leather, and minerals. The remainder, however, the miscellaneous group, and manufactured products reached their peak in March and both declined only slightly in April. The index number by groups is given below for the first four months of the year.

Index number of Wholesale Prices in Germany according to the *Frankfurter Zeitung*, July, 1914=1:

1923	Food	Textile and leather	Minerals	Misc.	Ind. products	All
January 1.....	1758	3206	2622	1778	1518	2054
February 1.....	5550	14317	9312	5347	4766	7159
March 1.....	5361	9450	8298	6949	5514	6770
April 1.....	5350	8349	7822	6434	5315	6393

**COST OF LIVING.**—The official index number of the Federal Statistical Office for cost of living (food, rent, heat and

light and clothing) was for the March average 2854 (1913-14=1) as compared with 2643 in February, a comparatively slight rise of 8 per cent. Rents were more than doubled in March. The index number without the cost of clothing rose 9.1 per cent to 2627. Foods rose 4.1 per cent to 3315 and clothing 3.8 per cent, to 4325 times pre-war prices. This slackening set in at the middle of February, and a number of foods became noticeably cheaper, especially fats, meat and fish as well as rice, pulses and potatoes, but butter, milk and eggs continued to rise in price considerably as well as rent, and heating and lighting.

### Poland.

**COST OF LIVING.**—The index number of cost of living at Warsaw, according to the *Monthly Bulletin of Municipal Statistics*, on the base fourth quarter of 1921=100 was 484.8 in December, an increase of 35 per cent on the level of the previous month. The index of foods was 430.9; of fuel and soap, 620.8; of rent, water and carfare, 700.4; of sundries, 609.2; and of clothing, 494.8. The item showing the steepest increase is rent, which was at 2099 in December, having increased by 10 times during that month.

### Spain

**WHOLESALE PRICES.**—The official index number of the Institute of Geography and Statistics (1913=100) showed no change for February, remaining at 170. Foods rose one point and industrial materials fell one point.

**RETAIL PRICES.**—The index number of retail prices at Madrid (1914=100) rose one point to 181 in February.

### Switzerland.

**COST OF LIVING.**—The index number of retail prices compiled by the Swiss Co-operative Union showed early in the year, after 2½ years of gradual fall, indications of rising prices which may be merely a fluctuation or may be a more

\* For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. a. Average for year. b. Quarter beginning in specified month. c. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. d. New index number is joined to old index number (38 commodities) and all converted to base 1913=100. For the years 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. e. The commodities in these two index numbers are in the one case, articles chiefly exported, in the other case, articles chiefly imported. f. First of month. g. Middle of month. h. End of month. j. Monthly average. k. New Göteborgs Handels och Sjöfartstidning.

deep seated change, resulting from the depreciation of the Swiss franc in March in foreign exchange. The index number as at April 1 (June 1, 1914=100) was 156 for foods and 161 for foods with certain items for fuel and washing materials, being in each case 102 per cent of the level as of March 1. During the month under review, 13 articles increased in price, 8 articles declined in price, and 26 showed little or no change.

### India

**COST OF LIVING.**—The official index number of the Bombay Labour Office for cost of living at Bombay showed for March a further drop of one point, to 154 (July, 1914=100). Cereals rose 2 points to 127, pulses dropped 3 points to 150, and other foods dropped 5 points. Under this last head were included salt and onions, which rose considerably, and sugar and potatoes, which declined in price. "All foods" declined one point to 149, fuel and lighting declined 2 points, and clothing and house rent showed no change from the level of the previous month.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics in March advanced 2 points to 159 or  $1\frac{1}{4}$  per cent on the February level. Building materials and metals showed the large increases of 3 and 7 per cent, and smaller increases were recorded for the groups of farm products, foods, cloths and clothing, chemicals and drugs, house-furnishing goods, and miscellaneous commodities. Fuel and lighting material continued downward, by  $2\frac{3}{4}$  per cent.

The index number calculated by the Federal Reserve Board rose 3 points during March to 169 (1913=100). Goods produced rose 2 points and goods imported rose 8, goods exported rising 6 points to 193. Raw materials and consumers' goods showed slight increases,

while producers' goods rose 9 points to 165, influenced by an advance in steel prices.

*Bradstreet's* commodity price index number continued to show a downward movement at May 1, reaching the level \$13.6665, a lowering of 2 per cent in April, as against only two one-hundredths of one per cent in March. The chief declines for April were in provisions and textiles, metals and naval stores also contributing. Six groups showed slight advances.

*Gibson's* average index number of wholesale prices of twenty-two articles of food rose again for April by 3 per cent, to 77.6.

The *Annalist* index number of wholesale prices of a food budget of 25 foods continued to decrease through April and into May, reaching at May 12 the level 180.150, the lowest since February, 1922.

*Dun's* index number of wholesale commodity quotations advanced 2.6 per cent at March 1 to \$191.157, and 1.0 per cent further to \$193.087 at April 1. It then declined 0.07 per cent to \$192.944 at May 1. This last movement is the first downward trend since last September. During May declines were shown in dairy and garden products, metals, and the miscellaneous class, and slight advances in the other groups.

**COST OF LIVING.**—The official index number of cost of living in the United States, compiled by the Bureau of Labour Statistics for March, 1923, showed the following percentages of increase from the 1913 average: food, 42.0; clothing, 74.4; housing, 62.4; fuel and light, 86.2; furniture, 117.4; miscellaneous, 100.3; total, 68.8. Electricity showed a decrease in price on December, 1914, of 2.4 per cent. The total cost of living index declined 0.4 per cent from the level of December, 1922, clothing, housing, and furniture showing increases, while food, fuel and light and the miscellaneous group showed declines.

The cost of living index number compiled by the Special Commission on the Necessaries of Life for Massachusetts was 157.5 for March, on the base 1913=100, a decrease of one point from the

level of the previous month. The group index numbers making up the average for March were: food, 138.8; clothing, 182.8; shelter, 164.5; fuel and light, 178.2; sundries, 168.8.

---

### FATAL INDUSTRIAL ACCIDENTS REPORTED DURING THE FIRST QUARTER OF 1923.

**I**NFORMATION received by the Department for the first quarter of 1923 shows 291 fatalities in the industries and trades of Canada, as compared with 346 in the previous quarter and 176 in the corresponding quarter of last year. There were 20 fatalities reported during this period, which occurred in the last quarter of 1922. Of the fatalities reported 95 occurred in January, 118 in February and 78 in March, as against 53 in January, 58 in February and 65 in March of 1922. In February last, 33 deaths were recorded as due to an explosion at a mine at Cumberland, B.C. and 10 resulted from monoxide poisoning following a flow of gas in the valve house of the Consumers Gas Company, Toronto, due to the overlooking of a valve. During the quarter, there were 85 fatalities reported in the transportation and public utilities group, 48 of which occurred in the steam railway service; 62 in the mining, non-ferrous smelting and quarrying group, of which 52 were in the coal mine section; 45 were in the manufacturing group, 37 in logging, 21 in construction and 11 in agriculture.

Forty-six deaths were due to explosions of various natures, three were caused by material precipitated from blasting operations, one by a delayed blast, one by mistaking gasoline for coal oil, one was due to the explosion of a furnace, one to fumes igniting when a tank at a brewery was being shellacked. Another accident was due to electrical flames, while a switchboard was being remodelled. Fourteen deaths were due to catching in the prime movers of machinery (belts, shaftings, gears, etc.); four to catching in machinery, rolls and saws; one to being struck by machinery and one to the breaking of a knife on a machine, one to the breaking of a tool used in adjusting a revolving machine, one to being struck by a hook used to pull sticks out of a grinder, and one to being struck by a bar inserted in a blower fan. There were four deaths due to electricity.

The following table has been prepared from information received from all sources available, but it does not necessarily include all the fatal industrial accidents that may have occurred.

## FATAL INDUSTRIAL ACCIDENTS DURING THE FIRST QUARTER OF 1923.

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE—</b>				
Farmer.....	Near Kent Bridge, Ont..	Jan. 3	68	Fell from ladder when rung broke
Farmer.....	Peterboro, Ont.....	" 7	45	Struck by falling branch.
Farmer.....	Berwick, N.S.....	" 12	71	Perished in storm.
Farm hand.....	Campbell River, B.C.....	" 24	50	Fell from loft.
Farmer.....	Guysboro, N.S.....	" 26	.....	Struck by falling tree.
Farmer.....	Celista, B.C.....	" 27	45	Struck by log.
Farmer.....	Garson, Ont.....	Feb. 2	.....	Thrown from wagon when horse bolted.
Farmer.....	Gonor, Man.....	" 6	.....	Buried under fall of earth at quarry
Farmer's son.....	Ouleppeville, Alta.....	" 7	20	Explosion—mistook gasoline for coal oil when thawing a well.
Rancher.....	Cypress Hills, Alta.....	March 3	.....	Kicked by a horse.
Farm hand.....	Clinton, Ont.....	" 28	17	Thrown from wagon when horse bolted.
<b>LOGGING—</b>				
Woodsmen.....	Windsor Forks, N.S.....	Jan. 1	.....	Struck by falling tree.
Woodsmen.....	Hubbard, N.S.....	" 1	.....	Struck by falling tree.
Woodsmen.....	Surge Narrows, B.C.....	" 4	.....	Struck by choker hook.
Woodsmen.....	Le Pas, Man.....	" 4	30	Struck by falling tree.
Woodsmen.....	Lakehurst, Ont.....	" 5	50	Struck by falling tree.
Woodsmen.....	Chancellor Channel, B.C.....	" 10	32	Struck by falling snag.
Logger.....	Myrtle Point, B.C.....	" 13	36	Struck by falling tree.
Woodsmen.....	Windsor Forks, Ont.....	" 13	.....	Struck by falling tree.
Logger.....	Near Massey, Ont.....	" 16	25	Struck by falling tree.
Woodsmen.....	Powassan, Ont.....	" 17	19	Struck by falling tree.
Woodsmen.....	Restigouche Co., N.B.....	" 17	19	Caught under slide of logs.
Woodsmen.....	Bear's Pass, Ont.....	" 18	42	Struck by falling tree.
Woodsmen.....	Cartier, Ont.....	" 21	.....	Struck by falling tree.
Woodsmen.....	Tobique River, N.B.....	" 25	19	Struck by falling log.
Tie maker.....	Rocky Mountain House, Alta.....	" 31	34	Struck by falling tree.
Tie maker.....	Leaman, Alta.....	Feb. 2	33	Struck by falling tree.
Woodsmen.....	Crow Rock Bay, Ont.....	" 7	55	(No particulars).
Sawyer.....	Lumberton, B.C.....	" 7	35	Struck by falling tree.
Labourer.....	Restigouche Co., N.B.....	" 9	46	Struck by falling tree.
Labourer.....	Restigouche Co., N.B.....	" 12	24	Struck by log which fell over cliff.
<b>Over</b>				
Woodsmen.....	Lotbinière Co., Que.....	" 13	21	Struck by falling branch.
Logger.....	Yahk, B.C.....	" 23	54	Picaroon was driven into body by tie which jumped from chute.
Woodsmen.....	Jonquière, Que.....	" 23	16	Crushed by falling tree.
Woodsmen.....	Brome, Que.....	" 25	17	Run over. (No further particulars).
Woodsmen.....	Sioux Lookout, Ont.....	" 28	58	Struck by falling tree.
Logger.....	Michel, B.C.....	March 5	27	Crushed by falling tree.
Teamster.....	Westlock, Alta.....	" 5	46	Fell from deck of logs while they were being rolled.
Logger.....	Stillwater, B.C.....	" 6	78	Struck by falling tree.
Logger.....	Cowichan Lake, B.C.....	" 7	39	Crushed by rolling log.
Woodsmen.....	Gore, Que.....	" 9	.....	Crushed by logs which fell when derrick broke.
Woodsmen.....	Ste. Anne de la Pérade, Que.....	" 10	28	Crushed by falling tree.
Logger.....	Lynn Valley, B.C.....	" 13	32	Crushed by rolling log.
Loader.....	White Rock, B.C.....	" 16	26	Thrown against rail when struck by jack line.
Logger.....	Cowichan Lake, B.C.....	" 21	41	Struck by falling tree.
Foreman.....	Clo-oose, B.C.....	" 24	35	Crushed between logs when unloading.
Logger.....	Grouse Mountains, B.C.....	" 28	44	Trampled by horse.
Logger.....	Prince Rupert, B.C.....	" 31	.....	Fell from wharf.
<b>FISHING AND TRAPPING—</b>				
Fishermen (6).....	North Atlantic.....	March 7	.....	Swept overboard in hurricane.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<b>Metalliferous mining:</b>				
Miner.....	Britannia Beach, B.C.....	Jan. 8	45	Delayed blast.
Miner.....	Kirkland Lake, Ont.....	" 14	.....	Crushed under rock which fell when timbers broke.
Driller.....	Britannia Beach, B.C.....	" 25	22	Crushed between wall plate and cage in shaft.
Miner.....	Timmins, Ont.....	Feb. 9	.....	Cave-in of muck.

## FATAL INDUSTRIAL ACCIDENTS DURING THE FIRST QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Coal mining:</i>				
Labourer.....	Springhill, N.S.....	Jan. 8	19	Slipped and fell between coal boxes.
Miner.....	Hillcrest, Alta.....	" 9	40	Struck by car.
Miner.....	Dominion, N.S.....	" 11	27	Struck by falling coal.
Miner.....	Coleman, Alta.....	" 12	35	Fall of coal.
Rock picker.....	Nanaimo, B.C.....	" 22	14	Foot caught in screw conveyor and caused fall.
Driller.....	South Porcupine, Ont....	" 24	44	Explosion.
Driver.....	Glace Bay, N.S.....	" 25	.....	Struck by full trap.
Miner.....	New Waterford, N.S.....	" 30	.....	Fall of stone.
Miners (33).....	Cumberland, B.C.....	Feb. 8	.....	Explosion. Workman attempted to light a cigarette.
Brakeman on coal special.....	Springhill, N.S.....	" 10	22	Slipped from top of car—run over.
Screenman.....	Stellarton, N.S.....	" 19	21	Caught between cars.
Cage runner.....	Thorburn, N.S.....	" 22	21	Slipped and fell under cage while it was in motion.
Miner.....	Drumheller, Alta.....	" 26	40	Fall of coal from roof.
Miner.....	Springhill, N.S.....	March 9	.....	Fall of stone.
Miner.....	Nanaimo, B.C.....	" 9	46	Fall of rock from roof.
Teamster.....	Ravenscrag, Sask.....	" 10	29	Fall of clay from roof following blast.
Miner.....	New Waterford, N.S.....	" 14	.....	Fall of stone.
Screen foreman.....	Stellarton, N.S.....	" 23	68	Caught in belting.
Miner.....	Canmore, Alta.....	" 28	29	Overcome by gas.
Workman at mine.....	North Sydney, N.S.....	" 31	30	Crushed between timber and coal box
<i>Non-metallic mineral mining and quarrying:</i>				
Miner.....	Thetford Mines, Que....	Feb. 1	39	Traumatic shock from blow in abdomen caused probably by fall of rock underground.
Driller.....	Asbestos, Que.....	" 8	39	Cave-in from side of open cast pit.
Workman at gravel pit.....	Hamstead, N.B.....	" 28	.....	Buried under avalanche of gravel.
Foreman.....	Robertsonville, Que.....	March 1	45	Struck by bar inserted in blower fan.
Labourer.....	Black Lake, Que.....	" 13	.....	Fall of asbestos bags in store shed.
<i>Clay products and structural materials:</i>				
Labourer at brick plant.....	Inglewood, Ont.....	Feb. 6	56	Struck by machinery.
<i>MANUFACTURING—</i>				
<i>Vegetable foods, drink and tobacco:</i>				
Workman at brewery.....	Toronto, Ont.....	Jan. 25	35	Burned while shellacing tank. Plug to electric heater became dislodged forming an arc which ignited fumes.
Workman at brewery.....	Quebec, Que.....	" 24	23	Struck by falling pulley.
Bottler at mineral water plant.	Kingston, Ont.....	Feb. 6	22	Throat cut by glass when bottle burst.
Employee at sugar refinery.....	Chatham, Ont.....	March 20	20	Struck by piece of tool machine which broke while adjusting revolving vat.
Employee at grist mill.....	Millhaven, Ont.....	" 29	19	Caught in shafting.
<i>Animal edible products:</i>				
Employee of milk company.....	Montreal, Que.....	Jan. 20	55	Fell down elevator shaft.
Employee at canning factory...	Victoria, B.C.....	March 13	55	Caught in belt.
<i>Textiles:</i>				
Employee at woollen factory...	Campbellford, Ont.....	Jan. 30	56	Caught in shafting while cleaning machine.
Dyer at knitting factory.....	London, Ont.....	Feb. 21	35	Caught in shafting.
<i>Leather, fur and products:</i>				
Carpenter at tannery.....	Acton, Ont.....	Jan. 11	48	Caught in shafting.
Employee of leather company...	Bracebridge, Ont.....	March 27	43	Buried when pile of frozen edgings collapsed.
<i>Rubber goods:</i>				
Employee at rubber factory.....	Hamilton, Ont.....	Feb. 16	25	Hands caught in calendar rolls.
<i>Pulp, paper and paper goods:</i>				
Workmen at paper mill (2).....	Kapuskasing, Ont.....	Jan. 6	21	Asphyxiated.
Engineer at paper mill.....	Thorold, Ont.....	" 11	37	Electrocuted while making test on high tension transformer.
Labourer at paper mill.....	Iroquois Falls, Ont.....	Feb. 5	28	Struck on head by hook.
Labourer.....	Ocean Falls, B.C.....	" 16	55	Buried when pile of pulp fell.
Employee at paper mill.....	Donnacona, Que.....	March 12	27	Caught by a belt while repairing it.
Employee at paper mill.....	Iroquois Falls, Ont.....	" 13	42	Struck by train.
Operator at paper mill.....	Cornwall, Ont.....	" 18	67	Crushed fingers. (No further particulars).

## FATAL INDUSTRIAL ACCIDENTS DURING THE FIRST QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Printing and publishing:</i>				
Stockkeeper at printing works..	Toronto, Ont.....	Feb. 20	49	Fell down elevator shaft.
<i>Saw and planing mills:</i>				
Superintendent at sawmill.....	New Westminster, B.C....	Jan. 23	48	Arm caught between pulley and sprocket while repairing conveyor chain.
Timber marker.....	Marpole, B.C.....	Feb. 22	36	Fell between pulley and post.
Workman at planing mill.....	Essex, Ont.....	March 5	45	Struck by wood which rebounded from saw.
Employee at sawmill.....	Cowan, Man.....	" 11	34	Sleeve caught in shafting.
Employee at sawmill.....	North Vancouver, B.C....	" 13	32	Crushed between logs.
<i>Wood products:</i>				
Employee at beaverboard factory.....	Thorold, Ont.....	Jan. 13	18	Clothing caught in revolving shaft.
Employee at beaverboard factory.....	Thorold, Ont.....	" 19	32	Struck by hook used to pull sticks out of grinder which caught in flange and flew back.
Labourer.....	Toronto, Ont.....	Feb. 6	52	Hand caught in saw.
<i>Iron, steel and products:</i>				
Ironworker.....	Winnipeg, Man.....	Jan. 10	.....	Dropped when attending boiler.
Labourer at steel plant.....	Hamilton, Ont.....	" 28	39	Crushed by car which moved while being unloaded.
Foreman at implement plant...	Peterboro, Ont.....	" 5	75	Fell through floor.
Car repairer.....	St. John, N.B.....	" 5	62	Run over.
Machinist.....	Montreal, Que.....	" 25	29	Struck by knife which flew off machine.
Workman at furnace plant...	Zug Island.....	Feb. 2	35	Severely burned in fire.
Labourer at steel plant.....	Walkerville, Ont.....	" 6	.....	Crushed under girder.
Employee at metal factory.....	Toronto, Ont.....	" 15	22	Burned. Hot tongs set fire to clothing.
Labourer at car shop.....	Cranbrook, B.C.....	" 20	30	Struck by car in yard.
Labourer at engine works.....	Galt, Ont.....	March 1	47	Fell from platform.
Labourers at implement works	Toronto, Ont.....	" 5	56	Caught in shafting.
Car carpenter.....	Moose Jaw, Sask.....	" 10	29	Struck by ballast trimmer.
Mechanic at steel factory.....	Hamilton, Ont.....	" 29	50	Stepped on loosened plate over pouring pit of furnace and fell with it to floor.
<i>Chemical and allied products:</i>				
Employee at carbide plant.....	Shawinigan Falls, Que...	March 10	52	Burned. Hit by pot full of melted metal being transferred by an overhead crane.
<i>Miscellaneous industries:</i>				
Factory employee.....	Portneuf, Que.....	Feb. 23	Over	Arm caught in machine.
Foreman.....	New Toronto, Ont.....	March 19	50	Poisoning.
CONSTRUCTION—				
<i>Building and structures:</i>				
Carpenter.....	Montreal, Que.....	Feb. 13	40	Fell from beam.
Workman.....	Montreal, Que.....	" 14	23	Fell from scaffold.
Carpenter.....	Toronto, Ont.....	" 21	35	Fell from scaffold.
Carpenters (3).....	Charlottetown, P.E.I....	" 23	Over	Collapse of roof.
Labourer.....	Point Grey, B.C.....	" 6	35	Struck by stump from blast.
Plumber's helper.....	Toronto, Ont.....	" 20	19	Crushed by elevator.
<i>Railway construction:</i>				
Extra gang labourer.....	Tollerton, Alta.....	Feb. 7	.....	Caught between frame of car and boiler of excavator.
Bridgeman.....	Hornepayne, Ont.....	March 3	27	Struck by iron girder.
<i>Shipbuilding:</i>				
Carpenter.....	Vancouver, B.C.....	Jan. 8	43	Fell down hatch in vessel.
Fitter.....	North Vancouver, B.C....	March 26	38	Fell from elevation when struck by plate which sprung out.

## FATAL INDUSTRIAL ACCIDENTS DURING THE FIRST QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Miscellaneous construction:</i>				
Teamster.....	Owen Sound, Ont.....	Jan. 9	27	Crushed against wagon when earth caved in.
Foreman with contractor.....	Brantford, Ont.....	" 20	.....	Auto skidded on road.
Workman with contractor.....	Hamilton, Ont.....	" 1	.....	Electrocuted.
Foreman of sewer department	Montreal, Que.....	" 27	.....	Asphyxiation.
Bridge builder.....	Revelstoke, B.C.....	Feb. 8	32	Blood poisoning caused by having arm caught in concrete mixer.
Rigger's helper.....	Great Falls, Man.....	" 10	35	Struck by rock from blast.
Workman with contractor.....	Welland Canal, Ont.....	March 11	.....	Drowned.
Bridge builder.....	Ymir, B.C.....	" 27	42	Struck by piece of stump while blasting.
Bridge builder.....	Fire River, Ont.....	" 20	28	Struck by falling stringer.
<i>TRANSPORTATION AND PUBLIC UTILITIES—</i>				
<i>Steam railways:</i>				
Railway conductor.....	Sherbrooke, Que.....	Jan. 3	.....	Knocked down by passenger alighting from train.
Trainman.....	St. John, N.B.....	" 5	62	Struck by train.
Sectionman.....	Montreal, Que.....	" 8	44	Run over by train.
Lamp lighter.....	London, Ont.....	" 9	55	Run over by train.
Brakeman.....	Medeche, Alta.....	" 11	43	Collision.
Labourer.....	Chapleau, Ont.....	" 17	29	Caught in gear of coal chute.
Shop foreman.....	Winnipeg, Man.....	" 18	35	Struck by crow bar which slipped from tender of engine.
Snow shoveller.....	Moncton, N.B.....	" 19	67	Struck by shunting train.
Sectionman.....	Sussex, N.B.....	" 19	43	Struck by shunting train.
Brakeman.....	St. Lambert, Que.....	" 20	27	Caught between engine and flat car.
Trainman.....	Stickney, N.B.....	" 22	28	Deraiment.
Brakeman.....	Palmerston, Ont.....	" 26	21	Run over by train.
Engineer.....	(near) Bliss, B.C.....	" 27	50	Deraiment.
Foreman.....	Stratford, Ont.....	" 29	50	Thrown—ankle injured.
Messenger.....	Fort Rouge, Man.....	" 31	15	Run over by train.
Car repairer.....	Mimico, Ont.....	Feb. 2	38	Run over by train.
Brakeman.....	South River, Ont.....	" 6	26	Crushed between cars.
Snow shoveller.....	North Wiltshire, P.E.I.....	" 8	32	Struck by train in a deep cutting.
Foreman shunter.....	Halifax, N.S.....	" 8	54	Fell from top of box car.
Brakeman.....	Springhill, N.S.....	" 9	.....	Fell from train—run over.
Trainmen (3).....	Openshaw, Sask.....	" 10	.....	Freight train crashed into stalled snow-plough, in blizzard.
Conductor.....	South Falls, Ont.....	" 12	.....	Crushed beneath wheels. Slipped when attempting to board moving train.
Hostler's helper.....	Chapleau, Ont.....	" 13	24	Run over by train.
Snow shoveller.....	near Hillsburn, N.S.....	" 15	56	Slid from bank on to track in front of train.
Conductor.....	Dumfries, Ont.....	" 15	44	Struck by train.
Engineer.....	Laurie Tunnel, B.C.....	" 17	52	Scalded when firepan blew out of engine.
Car shifter.....	Stellarton, N.S.....	" 19	.....	Caught between moving cars.
Watchman.....	Ashecroft, B.C.....	" 28	67	Shot.
Car inspector.....	McAdam, N.B.....	March 5	39	Rear end collision.
Labourer.....	Breslay, Que.....	" 8	52	Struck by a train.
Labourer at roundhouse.....	Moncton, N.B.....	" 9	.....	Struck by a slamming door.
Switchman.....	St. John, N.B.....	" 9	32	Fell from steps of train.
Sectionman.....	Eastray, Que.....	" 10	20	Run over by train.
Brakeman.....	Oshawa, Ont.....	" 11	.....	Crushed between freight cars.
Pumpman.....	Ignace Sd. Ont.....	" 13	56	Velocipede struck by train.
Sectionman.....	Kenora, Ont.....	" 14	23	Struck by freight train.
Section labourer.....	Leaman, Alta.....	" 14	23	Run over by train.
Brakeman.....	Oshawa, Ont.....	" 15	45	Caught between couplers.
Maintenance-of-way man.....	Montreal, Que.....	" 4	67	Struck by backing engine.
Watchman.....	Port Credit, Ont.....	" 22	.....	Struck by train.
Sectionman.....	Edson, Alta.....	" 23	21	Struck by falling pole.
Sectionman.....	Mississauga, Ont.....	" 24	33	Struck by snowplough.
Fireman.....	Winthorst, Sask.....	" 26	40	Deraiment.
Flagman.....	London, Ont.....	" 30	33	Struck by train.
Yardman.....	Fairville, N.B.....	" 30	54	Caught between cars.
Sectionman.....	North Wiltshire, P.E.I.....	" 31	28	Struck by train in cutting.
<i>Electric railways:</i>				
Labourer.....	New Westminster, B.C.....	Jan. 3	36	Struck by train.
Employee.....	Winnipeg, Man.....	" 21	35	Fell from top of car.
Conductor.....	Niagara Falls, Ont.....	Feb. 8	.....	Crushed between cars.
Poleman.....	Preston, Ont.....	" 19	40	Fell from motor of travelling car when placing pole on wire.
Labourer.....	Winnipeg, Man.....	" 19	35	Fell from top of car while repairing trolley.

## FATAL INDUSTRIAL ACCIDENTS DURING THE FIRST QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Water transportation:</i>				
Seamen (11).....	Pachena Point, B.C.....	Jan. 2	.....	Drowned at sea in storm.
Longshoreman.....	St. John, N.B.....	Feb. 10	55	Struck by material being hoisted.
Ship's cook.....	Off California Coast.....	" 24	42	Swept overboard from schooner.
Officer on steamer.....	Prince Rupert, B.C.....	March 12	.....	Struck by swinging crane hook.
Longshoreman.....	Belrock Reef, B.C.....	" 14	35	Knocked off a lighter by sling of lumber and drowned.
<i>Storage and local transportation:</i>				
Driver.....	Kenora, Ont.....	Jan. 24	35	Crushed under load.
Teamster.....	Rocky Mountain House, Alta. ....	Feb. 12	.....	Fell off sleigh.
<i>Telegraphs and telephones:</i>				
Workman.....	Ville Lasalle, Que.....	Feb. 2	42	Struck by falling crossbar.
<i>Public utilities, n.e.s.:</i>				
Workman at transformer station.....	Hamilton, Ont.....	Jan. 1	42	Electrocuted—Reinforcing rod being placed in running concrete came in contact with high voltage wire.
Employee remodelling switch-board.....	Toronto, Ont.....	" 12	27	Burned by flames from electricity.
Employees at gas works (10).....	Toronto, Ont.....	Feb. 8	.....	Asphyxiated; workman overlooked closing of valve.
Lineman.....	Toronto, Ont.....	" 13	58	Fell off pole.
Engineer at gas works.....	Hamilton, Ont.....	" 28	.....	Burned by fire when flue in water tube boiler blew out.
TRADE—				
<i>Warehousing:</i>				
Dry goods employee.....	Montreal, Que.....	Jan. 13	42	Crushed between elevator and floor.
Employee.....	Montreal, Que.....	" 31	21	Fell through banister on stairs.
<i>Retail:</i>				
Labourer at ice plant.....	Moose Jaw, Sask.....	Feb. 9	31	Crushed against roof when elevator failed to work properly.
Sales clerk.....	Victoria, B.C.....	March 12	18	Fell down elevator shaft.
Manager at lumber yard.....	Rosetown, Sask.....	" 29	30	Ladder slipped causing fall.
SERVICE—				
<i>Public and municipal:</i>				
Land buyer with Highway Department.....	Near Chatham, Ont.....	Jan. 23	41	Automobile collision.
Fireman.....	Montreal, Que.....	" 28	24	Overcome by smoke.
Constable.....	Montreal, Que.....	March 26	33	Shot while attempting an arrest.
Fireman.....	Fort William, Ont.....	" 27	.....	Collapse of wall.
<i>Recreational:</i>				
Caretaker of golf links.....	Amherst, N.S.....	Feb. 15	53	Struck by falling ice conveyor; infection.
<i>Laundering, dyeing and cleaning:</i>				
Washman.....	Toronto, Ont.....	Feb. 5	28	Fell off ladder.
<i>Personal:</i>				
Domestic.....	Saskatoon, Sask.....	Jan. 14	65	Fell down cellar steps; entered wrong door at night.
Janitor.....	Montreal, Que.....	" 3	.....	Struck by metal when furnace exploded.
Window cleaner.....	Montreal, Que.....	Feb. 27	64	Fell from third storey window.

## FATAL INDUSTRIAL ACCIDENTS DURING THE FIRST QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
MISCELLANEOUS—				
Labourer.....	Ocean Falls, B.C.....	Jan. 7	31	Crushed under machinery which fell from steamer to dock while unloading.
Snow shoveller.....	Kingston, Ont.....	" 10	.....	Fell from roof.
Helper.....	Montreal, Que.....	" 22	30	Fell down stairs.
Labourer.....	Montreal, Que.....	" 22	38	Lacerated foot; blood poisoning.
Labourer.....	Vedder River, B.C.....	" 23	61	Drowned.
Night watchman.....	Quebec, Que.....	Feb. 21	73	Perished in fire.
Labourer.....	Copper Creek, B.C.....	March 2	29	While barring rocks on slope, slipped off edge of cliff.
Workman at supply company..	Windsor, Ont.....	" 5	.....	Fell from bin to ground.
Elevator operator.....	Calgary, Alta.....	" 26	.....	Crushed between elevator and shaft.
Church sexton.....	Rockland, Ont.....	" 23	.....	Electrocuted. In fall from roof caught live wire.

## SUPPLEMENTARY LIST OF ACCIDENTS OCCURRING DURING THE YEAR 1922.

Trade or Industry	Locality	Date	Age	Cause of Fatality
Nurse.....	New Westminster, B.C....	Jan. 1	25	Tripped on edge of stairs and fell.
Carman.....	Westmorland Co., N.B....	May 16	31	Struck by maul.
Workman at mine.....	Copper Cliff, Ont.....	July	.....	Cave-in.
Workman with corporation...	Collingwood, Ont.....	Aug. 18	.....	Struck by truck.
Sawyer.....	York Co., N.B.....	Sept. 4	63	Injured internally while rolling logs on carrier.
Foreman.....	Nelson, B.C.....	Oct. 15	61	While boarding scow fell from gang-plank.
Workman at sawmill.....	Port Arthur, Ont.....	" 21	.....	Caught in shafting and thrown on saw.
Labourer.....	Charlotte, N.B.....	" 23	21	Cut by axe.
Woodsmen.....	Nipigon Straits, Ont.....	Nov. 10	35	Struck by falling tree.
Sawyer.....	St. John, N.B.....	" 23	60	Struck by falling tree.
Labourer.....	Nedelac, Ont.....	About Dec. 1	.....	Kicked by a horse—infection. (Died Jan. 16, 1923).
Trammer.....	Premier, B.C.....	" 3	27	Explosion of temporary underground magazine.
Woodsmen.....	North Co., N.B.....	" 7	69	Fell from horse—pneumonia due to accident.
Switchman.....	McIntyre Lake, N.S.....	" 15	.....	Run over by cars.
Painter with transportation company..	Niagara Falls, Ont.....	" 16	57	Struck by plank which fell from scaffold.
Employee at iron factory.....	Toronto, Ont.....	" 19	40	Fell with cage when hook became disengaged from plate.
Sawyer.....	Restigouche Co., N.B....	" 19	23	Struck by sliver from saw.
Fuelman.....	North Co., N.B.....	" 23	49	Crushed under coal car.
Helper at engine works.....	Galt, Ont.....	" 26	45	Fell off waggon.
Labourer.....	Madawaska Co., N.B....	" 27	59	Struck by falling bales of pulp.

## IMMIGRATION TO CANADA DURING FIRST QUARTER OF 1923.

THE following table compiled from information furnished by the Department of Immigration and Colonization gives some details respecting the total number of immigrants into Canada during the first quarter of 1923. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1922 are also given.

The table on page 568 gives the nationality, sex, occupation and destination of all immigrants who entered

Canada during the quarter under review.

## IMMIGRATION TO CANADA DURING THE FIRST QUARTER OF 1923.

Period 1923	Great Britain and Ireland	U.S.A.	Other Countries	Totals
January.....	1,057	642	903	2,602
February.....	1,356	723	1,211	3,290
March.....	3,570	1,662	1,516	6,748
First quarter, 1923..	5,983	3,027	3,630	12,640
Fourth quarter, 1922..	6,184	3,942	3,790	13,916
First quarter, 1922..	2,480	4,751	2,945	10,176

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

---

**T**HE three legal decisions which are summarized below relate respectively to a case of workmen's compensation in Quebec, and a case respecting the Quebec Municipal Strike and Lockout Act of 1921. Elsewhere in this issue reference is

made to a decision of the First Divisional Court of Ontario respecting combines in restraint of trade and a decision of the United States Supreme Court respecting the minimum wage law enacted by Congress for the District of Columbia.

**Quebec Workmen's Compensation law applies when wages actually received come within limit set.**

A workman in Montreal employed in making lasts met with an accident which caused the loss of his left arm and other severe injuries. He brought an action against his employer under the Workmen's Compensation law of Quebec claiming the sum of \$3,900. He declared that at the time of the accident his salary was about \$1,400 a year, and based his claim on total incapacity for two years, and permanent partial incapacity of at least fifty per cent.

The employer submitted evidence to show that during the twelve months before the accident the plaintiff had worked only 2,187 hours and had received from his employer \$1,327.25, but he could have worked 2,659 hours when he would have earned in the whole year \$1,651. The employer claimed that the salary which ought to serve as a basis was not only that which was actually received, but that which was allotted, and he concluded that the plaintiff could not therefore invoke in his favour the application of the Workmen's Compensation law, as it does not apply in cases where the yearly remuneration exceeds \$1,500.

The Court differed from the view of the employer and held the opinion that

the sum which ought to serve in this case to fix the application of the law and at the same time the calculation of the indemnity was \$1,327.25 the amount which the plaintiff actually received, for the reason that the remuneration serving as the basis for fixing the rent (or monthly payments) is that which was allowed to the injured workman during the twelve months before the accident, that is the wages which he had actually earned without counting what he might have earned if he had avoided the loss of time which he had voluntarily incurred; and the remuneration which serves as a basis for the fixing of rents is equally that which serves to decide whether the law of Workmen's Compensation applies or not. The Court therefore condemned the employer to pay to the workman the sum of \$27.64 per fortnight from January 20 to December 20, 1923 with the right of deducting an amount due to him by the latter on account of payments made by the employer after the accident, and instructed both parties to appear before the Court again next December for further adjudication of the case.

(Quebec—*Millette vs. Robin.*)

After appointment of Board under Quebec Municipal Strike and Lockout Act, question of technical irregularity cannot be raised.

On January 31, 1922, the Federal Union of Police of Montreal, requested the Provincial Minister of Labour to appoint a Board of Arbitration under the Municipal Strike and Lockout Act of 1921 to deal with certain differences which had arisen between the Union and the City of Montreal. The request for a Board was made in due form, but the applicants were informed by the Minister that matters which they desired the Board to deal with did not fall within the scope of the statute. At the suggestion of the Minister the application was amended so as to come within the scope of the Act and the Board was then constituted, both parties to the dispute naming an arbitrator and the two choosing a third. After the arbitrators had been sworn and before they commenced their work, the City applied in Court for an injunction in order to put a stop to the arbitration on the following grounds: (1) The Minister of Labour and Public Works had gone beyond the powers conferred on him by law; (2) The second request of the applicants had not been authorized by a new resolution of the Union; (3) The third arbitrator had been named after the time fixed by law.

The Superior Court refused to grant the injunction, and the City appealed to the Court of King's Bench. The sole question raised in the appeal was that inasmuch as the first application made by the Union requested the appointment of a Board of Arbitrators for the purpose of enquiring into cer-

tain differences concerning employees who did not come within the application of the law and also as to matters to which the law did not apply, it was beyond the power of the Minister of Labour and Public Works to allow a modification of the application and to create the Arbitration Board as it was created. In other words, because the Union did not hold another meeting and pass another resolution authorizing the officers to make a new application, all proceedings had by the Minister were illegal and the Board of Arbitration was without power or jurisdiction to proceed.

The Court held that the Board as finally granted and created was strictly in accordance with the law, and the matters and things into which the Board was called upon to determine existed between employees and employers covered by the Statute. The appellant acquiesced in the act of the Minister without protest or objection and named its arbitrator who with the arbitrator of the Union chose a third. Once the Minister was satisfied that the application was in due form and the Board was named and appointed according to the statute, and had jurisdiction, the appellant was without right to raise a question of technical irregularity.

The appeal was therefore dismissed and the judgment of the Superior Court was confirmed.

*(Quebec—City of Montreal vs. Hall et al.)*

MINISTER—THE HONOURABLE JAMES MURDOCK.  
DEPUTY MINISTER—F. A. ACLAND.

Volume 23

JUNE, 1923

Number 6

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

**I**N addition to the regular monthly articles, this issue of the LABOUR GAZETTE contains two articles on labour legislation, one being a summary of recent labour legislation in Nova Scotia, New Brunswick and Alberta, and the other a comparison of factory acts of the various provinces; a summary of the second annual report of the Department on organizations in industry, commerce and the professions in Canada; the text of an important legal decision respecting picketing recently delivered in the Superior Court of the District of Montreal; a summary of a judgment given by the United States Supreme Court on June 11 involving the validity of the Kansas Court of Industrial Relations; and an article giving the fair wages in provincial public works in Manitoba, fixed by the government of that province.

### Monthly summary.

During May there was a decided improvement in employment conditions generally throughout Canada especially in building and construction, mining, and logging. At the beginning of May, the percentage of unemployment among members of the trade unions was 4.6 as compared with

6.8 at the beginning of April and 10.4 at the beginning of May, 1922. At the end of April, the volume of employment as reflected in reports from employers showed a marked increase. Firms in all except the Maritime Provinces reported largely increased staffs, the gains being especially pronounced in Quebec and Ontario.

The average cost of a weekly family budget of 29 staple foods was \$10.36 at the beginning of May as compared with \$10.64 in April, \$10.22 in May, 1922, \$12.25 in May, 1921, \$16.92 in June, 1920 (the highest point reached) and \$7.43 in May, 1914.

The time loss due to industrial disputes during May was greater than in the previous month, but less than during May, 1922. Thirty-four disputes began or were in progress during the month, involving 4,707 employees and causing a time loss estimated at 65,188 working days. Corresponding figures for the previous month were 22 disputes involving 2,263 employees and a time loss of 34,333 working days, and for May, 1922, 31 disputes involving 13,433 employees with an estimated time loss of 279,857 working days. At the end of May there were 18 disputes in progress involving 2,101 employees.

**Proceedings  
under the  
Industrial  
Disputes  
Investigation  
Act.**

Five reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in May.

Two applications for the establishment of Boards were received, and two Boards were established during the month.

**Validity of  
anti-combine  
section of  
Criminal Code.**

An outline was given in the last issue of the LABOUR GAZETTE (page 453) of a judgment delivered on April 18 in the First Divisional Court of Ontario, in the course of which the Chief Justice expressed the view that section 498 of the Criminal Code, prohibiting combinations in restraint of trade, was *ultra vires* of the Parliament of Canada. In the debate in the House of Commons, on May 7, on the second reading of a Bill to Provide for the Investigation of Combines, Monopolies, Trusts and Mergers, the Prime Minister announced that he had asked the Department of Justice for an opinion as to the possible consequences of this judgment, and that the Deputy Minister of Justice had replied as follows:

I have considered the judgments of the Appellate Division of the Supreme Court of Ontario in the case of Attorney General vs. Canadian Wholesale Grocers, herewith, with relation to its effect as to section 498 of the Criminal Code, and I find that it does not conclude any question as to the authority of parliament to enact that section.

The court was composed of the Chief Justice, Hodgins, Ferguson and Magee, J. J. The Chief Justice reluctantly considered that he was bound by the observations of Lord Haldane in the Board of Commerce case to hold that section 498 was *ultra vires*, as not relating to criminal law within that section of the British North America Act, 1867. Hodgins and Ferguson, J.J., however, expressly refrained from expressing any opinion against the validity of section 498, although they agreed with the Chief Justice for other reasons that the appeal should be dismissed. Magee, J. con-

curred in the result without any observations or reasons, and so it stands that the invalidity of section 498 rests only upon the opinion of the Chief Justice.

I do not think that it is at present necessary or advisable that our course of action should be in any wise modified by reason of the view which the Chief Justice expressed. I do not think that the question is governed by Lord Haldane's observations, and when it arises for decision we will have an opportunity to make good our claim for legislative authority. Meantime I would proceed upon the assumption that the enactment is *intra vires*.

**Adolescent  
school attendance  
in Ontario.**

By a proclamation published in the *Ontario Gazette* on May 19, 1922, the date on which section 7 of the Adolescent School Attendance Act will take effect was deferred for a further period of two years, namely from September 1, 1923, to September 1, 1925. The earlier date had been fixed for this section of the act in a proclamation of July 13, 1920. The Adolescent School Attendance Act became law at the legislative session of 1919 (chapter 78), to come into force and take effect on a day to be named by the Lieutenant Governor-in-Council. The sections requiring the school attendance of adolescents between 14 and 16 years for an aggregate of at least 400 hours each year, with certain exceptions, took effect on September 1, 1921. Section 9, requiring every urban municipality with a population of 5,000 or over to establish and maintain part time courses of instruction for adolescents between 14 and 18 years of age, took effect on September 1, 1922. Section 7, the operation of which is now postponed, is as follows:

(1) Unless excused for reasons herein-after mentioned, every adolescent between sixteen and eighteen years of age shall attend part-time courses of instruction, approved by the Minister, for an aggregate of at least 320 hours each year, distributed as regards times and seasons as may suit the circumstances of each locality, when such courses of instruction are established in the muni-

city in which he resides or is employed.

(2) The obligation to attend part-time courses of instruction under this section shall not apply to any adolescent if—

(a) He is unable to attend such courses by reason of sickness, infirmity, or other physical defect;

(b) He has passed the matriculation examination of an approved university or has completed to the satisfaction of the Department of Education, a course of study which may be regarded as the equivalent of the requirements of such examination;

(c) He is in full-time attendance at a public or a separate school, a high school, a university, or other school approved by the Minister;

(d) He is shown to the satisfaction of the public school inspector in the municipality in which he resides to have been, up to the age of sixteen, under full-time instruction in a school recognized by the Department of Education as efficient, or under suitable and efficient full-time instruction in some other manner.

#### Quebec workmen's compensation commission not yet named.

The Quebec legislature at its last session enacted a measure providing for the appointment by the Lieutenant Governor in Council of

a commission to inquire into labour conditions in the Province with special reference to workmen's compensation, the commission to be composed of five members, two representing the employers, two representing organized labour, and a chairman named by the government (LABOUR GAZETTE, March 1923, page 265). Effect has not so far been given to the act by the appointment of a commission. The provincial branch of the Canadian Manufacturers' Association is understood to have already submitted to the Government a list of names from which to select two as its representatives. Difficulty, however, is experienced in regard to the securing of labour representatives owing, it is suggested, to the division of organized labour in the Province into two sections, namely, the National

and Catholic unions and the unions having international affiliation.

Suggestions for the adoption in Quebec of a commission system similar to that in Ontario and other provinces, have mostly come from the side of the international unions. On the other hand, there is said to be considerable support for the policy of retaining the system of compensation now prevailing in the Province, and of bringing it into line with present conditions.

#### New plans of insurance for civic employees.

The Winnipeg City Council has under consideration a "sick pay" system under which permanent employees on a monthly salary are assured of continued pay for limited periods in the event of temporary incapacity resulting from sickness or injury arising out of or in the course of regular employment. Full pay is allowed for thirty days a year, and for a period of sickness or accident disability in excess of thirty days in any one year an employee is allowed 70 per cent of his regular salary. The certificate of the city medical officer is required in each case. If the employee is entitled to compensation under the Provincial Workmen's Compensation Act the city makes up any difference which may exist between the amount so received and the amount which would otherwise be allowed under the new civic scheme. The action of the City Council in providing sick and accident pay is said to have been suggested by certain cases in the Fire Department, in which firemen had contracted serious colds while on duty, and could not be given pay during their illness.

Systems of group insurance for outside and inside members of the municipal staff were adopted by the City of Vancouver early in the present year. Members of the outside staff will be insured with a insurance company against sickness or accident, the city

bearing two-thirds of the cost of insurance. If the disability is not due to employment the employees will receive 70 per cent of their pay; if it is due to employment the employees will receive from the company the amount of the difference between the allowance made by the Workmen's Compensation Board and 70 per cent of their average pay. Further, the outside employees will be protected by life assurance to the extent of \$1,000. Inside employees on the permanent staff will be afforded life insurance with a private company on the group plan, but will themselves bear the cost of this protection. It is claimed that the new scheme will involve no increase in civic expenditure, as it was formerly customary to give employees an allowance during illness.

The City of Victoria has taken advantage of the British Columbia Superannuation Act of 1921 to provide superannuation benefits for City Hall workers, policemen and firemen to take effect from July 1. The City Council has contributed \$8,000 to meet the costs of the scheme for the last six months of the present year.

**Minimum wages in Alberta.** In connection with objections which had been made by employers to the recent orders of the Minimum Wage Board of Alberta Mr. Walter Smitten, Provincial Commissioner of Labour, informed the Calgary Trades and Labour Council on May 18 that employers almost without exception had fallen into line with the Board. Some employers, however, had laid off help as the result of the new orders. He knew of eleven girls who were thus thrown out of employment, but expressed the opinion that girls who received about \$30 a month after serving two, three, or four years in learning the work would be as well out of that employment. As has been noted in the LABOUR GAZETTE the minimum wage of \$14 per week is now in operation in regard to female employees in

offices, hotels and restaurants. The same minimum wage will be applied after September 1 to the manufacturing industries and retail establishments. The clauses in the minimum wage act relating to learning periods in factories, laundries, shops and stores, are now in effect, the minimum wages for learners ranging from \$7.50 to \$12 per week.

**Ratification of draft conventions of International Labour Conference.** In previous issues of the LABOUR GAZETTE mention has been made of the action of various countries with regard to the ratification of

draft conventions adopted at the sessions of the International Labour Conference. In a supplement to the issue of February, 1922, an account was given of action taken with regard to the draft conventions adopted at the first two sessions of the International Labour Conference. In the issue for March, 1923, on page 225 mention was made of further action taken in certain countries. Notice of the following additional ratifications has also been given.

The State of Denmark has ratified the convention concerning Workmen's Compensation in agriculture adopted at the Third Session of the Conference which met at Geneva on October 25, 1921. The Estonian Republic has ratified the three draft conventions adopted by the Genoa Conference which met in 1920. These conventions relate to facilities for finding employment for seamen, fixing the minimum age of children to be employed on ships at fourteen years, and concerning unemployment indemnity in case of loss or foundering of ship. The government of India has ratified the following conventions adopted by the International Labour Conference at its Third Session: (1) Fixing the minimum age for the admission of young persons to employment as trimmers and stokers, and (2) Concerning the compulsory medical

examination of children and young persons employed at sea.

The total ratifications communicated to the Secretariat is at present 69, in addition to which 12 countries have adhered to the Berne White Phosphorus convention. The British policy respecting the conventions is outlined elsewhere in this issue.

**Report of Proceedings, Fourth International Labour Conference.** The final record of the proceedings of the fourth session of the International Labour Conference (League of Nations) held in Geneva from October 18 to November 3, 1922, is now complete and available for distribution from the International Labour office in Geneva. It contains a verbatim report of the proceedings together with the relevant discussions and reports submitted to the Conference and the resolutions adopted. The annual report of the Director appears as an appendix and contains an outline of the various matters which are engaging the attention of the International Labour Organization.

**Conference of countries of emigration.** Under the terms of a Convention drawn up by a conference of European countries of emigration held at Rome, a Permanent Committee has been established composed of representatives of the contracting states. This Permanent Committee is to meet from time to time at Rome under the presidency of the Italian representative. The object of the Committee is to further common action among European countries of emigration, with a view to their defence of their respective economic interests with regard to labour problems. The final instrument as drawn up by the Rome Conference has now received the approval of the following countries: Austria, Bulgaria, Greece, Hungary,

Poland, Roumania, and Czecho-Slovakia. A semi-official statement has been issued in the case of three other countries of their agreement to the terms of the Convention. On December 22, 1922, the Italian Cabinet ratified the Convention.

**Attitude of Germany towards Recommendations of International Labour Conference.** It is announced that the German Reichsrat has approved of the introduction of a bill authorizing the adherence of Germany to the Draft Convention concerning Unemployment which was adopted at the first International Labour Conference, and also providing for the acceptance of certain of the Recommendations of the Conference. Pursuant to the Reichsrat decision the German Minister of Labour introduced a bill and draft resolution in the Reichstag for the foregoing purpose. The bill deals with the Unemployment Convention, and the resolution requests the German Government to give effect as far as possible by legislative or other measures to the following Recommendations which were adopted at the first session of the International Labour Conference:

1. Unemployment.
2. Reciprocity of Treatment of Foreign Workers.
3. Prevention of Anthrax.
4. Protection of Women and Children Against Lead Poisoning.
5. Establishment of Government Health Services.
6. Application of Berne Convention of 1906 on the Prohibition of the Use of White Phosphorus in the Manufacture of Matches.

It is pointed out in an accompanying memorandum that the proposals of these Recommendations are in various respects enforced in Germany at present.

**Proposed study  
of mine  
explosions.**

It is announced that a study of factors causing mine explosions will be undertaken at the Carnegie Institute of Technology, Pittsburgh, Pa., in the year commencing September 1923. The study will be divided into investigations of (a) modifications of Stokes law for settling of coal dust particles, (b) time-pressure relations in dust explosives; (c) conductivity and specific heat of coal; (d) static charges in coal mines; and (e) effect of electric field in propagation of explosions. Six college graduates will be appointed to Research Fellowships to conduct the investigations in cooperation with the United States Bureau of Mines and an advisory board of Pittsburgh coal operators and mining engineers. Other subjects for investigation during the coming year will be geology, acid mine waters, coal mining, coal washing, utilization of coal, safety and efficiency, and coal storage.

**Amalgamated  
clothing workers'  
plan of  
unemployment  
insurance.**

The Amalgamated Clothing Workers of America by agreement with employers of Chicago have adopted a plan for the creation of an unemployment insurance fund for the benefit of their members in that city. The agreement provides that the employers are to contribute a sum equal to not more than 1.5 per cent of their wage bills to this fund and each member of the union will contribute a similar percentage of his earnings. Any member of the Amalgamated Clothing Workers of America who has been at work for a year will be entitled to receive unemployment benefits which will be up to the amount of 40 per cent of his full earnings, but not more than \$20 per week. He will begin to receive them at the end of his second week out of work, and may continue to receive them for five weeks of the insurance year. His unemployment of course must not be due to any fault of his own or

through the calling of a strike by the union. The details of the management of the fund have not yet been worked out, but they are to be embodied in a legal agreement which is to be ready by July 1.

**Vocational  
training for  
bricklayers.**

The acute shortage of bricklayers, plasterers and painters in Canada and the United States has forced employers and labour organizations to the conclusion that something must be done immediately to encourage boys to enter these trades and to provide means for the thorough training of apprentices. Several remedies for the existing situation have been suggested, including the Piggott Plan referred to in recent issues of the LABOUR GAZETTE, and some steps have been taken to provide better training facilities for apprentices. It is understood that a class in bricklaying has been opened at the Toronto Central Technical School and that other schools in Canada are contemplating the operation of special apprentice classes for boys entering the building trades. The following brief description of a trade class for bricklayers opened last September in Salt Lake City, Utah, should be of interest to all persons wishing to study the problem of securing an adequate supply of skilled workers in the building trades.

About a year ago the Utah State Board for Vocational Education undertook to learn the facts regarding the shortage of bricklayers. After assuring themselves that a real need for a training class existed and that employers and employees were willing to co-operate in its organization and operation, they appointed an advisory committee to undertake the work. The members consisted of one representative each from the contractors, bricklaying union, building supply houses, associated industries, city schools, and the State Department of Vocational Education. The committee made a thorough study

of the situation and secured the co-operation of the local superintendent of schools who arranged for suitable quarters. They obtained grants and materials from various firms, and selected a suitable instructor. This man was sent to visit a number of successful bricklaying classes in order to collect material and ideas for the proposed class. Some difficulty was experienced in obtaining students but a brief advertisement in the help-wanted columns of the papers secured more applicants than the committee could accommodate.

Classes are held daily from 8 a.m. until noon, during the fall and winter months. Whenever possible suitable work is secured for the students during the afternoons. All bricklaying is done in the school but it is hoped that arrangements may be made with the unions to permit the students to work on outside work. It has not yet been determined what the status of the students will be after completion of their course but they are receiving a through training in the making of foundations, walls, chimneys, openings, fireplaces, steps, walks, floors, assay furnaces, boiler-setting and in estimating. Each student pays a fee of ten dollars but is supplied with a set of bricklayers' tools which become his property on completion of the course.

A complete description of the work being done appears in the June issue of the Industrial-Arts Magazine, Bruce Publishing Co., Milwaukee, Wis.

#### Special course of study for pulp and paper workers.

In 1918 a joint educational committee of the pulp and paper industry in the United States and Canada undertook the preparation of a complete textbook for workers in the industry. Three volumes have been issued and it is expected that the remaining two will be in circulation before the end of the year. The books are written

in simple non-technical language for use in home study or special classes conducted in schools or mills. The first two volumes deal with the mathematics and general science necessary for an understanding of the processes and methods of the industry. Volume three describes the properties and preparation of pulpwood and the manufacture of all kinds of pulp. Volumes four and five cover the manufacture of paper. The text is also available in pamphlet form for the convenient study of workers.

Courses have already been organized in many plants in the United States and Canada. The Institute of Industrial and Domestic Arts of Gardenvale, Quebec, is endeavouring to introduce the textbook and organize classes in every pulp and paper mill throughout the Dominion, and the University of Wisconsin is organizing the work in the United States. The classes are conducted under the supervision and direction of local educational committees representing the industry.

#### Proposed Amendments to British Trade Boards Act.

A Government Bill was introduced in the British House of Commons by the Minister of Labour, on May 8, to amend and consolidate the Trade Boards Act of 1909 and 1918, and to substantially carry out the recommendations which were made by Lord Cave's Committee on Trade Boards. One of the chief of these recommendations embodied in the Bill is that, following the lines of the original Trade Board Act of 1909, Trade Board machinery should in the future be applied only to trades in which wages are unduly low as compared with those in other employments, and in which no other adequate machinery exists for the effective regulation of wages. It is further proposed in accordance with another recommendation of the Committee that the full powers of a Trade Board to fix rates which are enforceable by criminal proceedings should exist only

as respects rates fixed with reference to the lowest paid grades of workers, but the Bill gives encouragement to the voluntary development of satisfactory organisation in trades by enabling the representatives of employers and workers to come together and agree upon the rates of wages to be paid to all grades of workers throughout the trade, and by making provision that when such organisation becomes effective in any trade it will be possible to withdraw the trade from the operation of the Bill.

**Labour Co-partnership in Great Britain.**

A Bill was introduced in the British House of Commons recently "to promote the more general adoption of co-partnership between capital and labour between statutory and other companies". The measure referred to was introduced at the instance of the Labour Co-Partnership Association in England and was supported on its introduction by several members of the House. The preamble refers to the great loss to the industries of the country by the opposition of capital and labour and to the resultant increase of cost of production and prices of all commodities, and further declares it desirable "to restore to the wage-earning classes human interest in life and work and to place them in a position of economic equality with every other class". Provision is made in the Bill for the establishment of a body to be called the Industrial Co-Partnership Commissioners, one of whom shall be appointed by the Trade Union Council, one by the Federation of Employers in British Industries, one by the Labour Co-Partnership Association, one by the President of the Board of Trade, and one, who shall be chairman, by the Chancellor of the Exchequer. Power is given in the Bill for companies engaged in production to submit schemes for the approval of the Co-Partnership Commissioners, to authorize the division of proceeds between the capital and labour employed in such ratio and manner in all respects as the Commissioners may

approve. It is declared that every such scheme shall provide:—

(a) for the payment to all employees of the company in addition to any share in profits (hereinafter called "the employee bonus") of wages at rates not being less than the rates commonly paid in the district where the company carries on business for work of a like nature to the work performed by the company's employees;

(b) for fixing a basic rate of interest upon capital invested in the company's business, such basic rate to bear relation to the risks involved in such business;

(c) for the investment of some part (not being less than one-half) of the employee's bonus in the capital of the company;

(d) that the employee's bonus, whether paid in cash or in stock or shares of the company, shall not be liable to forfeiture for any legal act or omission of the employee entitled thereto.

As a means of encouraging the adoption of co-partnership arrangements the Bill sanctioned a reduction of income tax and stamp duties to companies which have adopted such schemes and also a preference to co-partnership companies in the allocation of government and other public contracts.

**Order of Board of Railway Commissioners respecting eye tests for engineers.** Last November the Board of Railway Commissioners for Canada was requested to render a decision on two points respecting the eye tests of locomotive engineers as set out in General Order No. 94. It was claimed that Rule 17 was inconsistent with the standard set out for re-examination, and that the final test of the fitness of an engineer should depend on the field test. In the judgment of the Board which was delivered on March 27, it was agreed that there was an inconsistency in the rules, as according to rule 17, a man with one totally blind eye, who by the aid of glasses could have his vision brought to 20-30 could pass the test, while under the re-examination statement he could not possibly do so.

With regard to the claim that final decision should depend on the field test, it was pointed out that this matter had already been decided by the Board. On June 20, 1912, a judgment was issued by the Board in which the following principles were laid down:

"1. No person shall be employed in railway service until he has passed the indoor test satisfactorily.

2. Any employee going up for a periodical examination or an examination for promotion, shall be examined by the indoor test; and in case he fails to pass the indoor test satisfactorily, he shall be given an outdoor test, according to the Uniform Rules submitted herewith; and in such case the latter shall be taken as the governing test; and, during the outdoor examination, the candidate shall be permitted to wear glasses, as provided for in the said rules, if he wishes to do so."

Subsequently the Railway Companies were instructed by Order of the Board to put into force a schedule attached to the Order, which is the present General Order No. 94. On April 14, 1913. Mr. Scott, Assistant Chief Commissioner, was requested to give a ruling as to whether upon periodical examination of engineers in the service, should they fail to pass the technical indoor test, they were entitled to receive the field test, the result of the field test to govern.

The reply was that an engineman who fails to pass the indoor test when going up for his periodical examination should be entitled to an outdoor test, and if he successfully passes this he should be permitted to retain his position.

The railway companies under the jurisdiction of the Board were therefore ordered to reprint their general instructions amending the re-examination statement to read as follows: "20-30 combined not less than 20-50 in either eye without glasses. When com-

bined vision without glasses is not less than 20-50, and either eye not less than 20-70, or nil, and by the aid of glasses combined vision can be brought to not less than 20-30, enginemen must wear glasses."

The opinion was also expressed that there should be a formal declaration that when an engineman, on his periodical examination, fails to comply with the requirements of the indoor test, as hereinbefore described, and wishes to take the outdoor test, an opportunity should be provided for the same, and if he qualifies on the outdoor test, he should then be permitted to remain in the service, subject to assignment as provided for by the rules.

**Industrial injuries to eyes,** According to information obtained by the United States Bureau of Labor Statistics with

respect to the causes and cost of industrial eye injuries in the United States, based upon the accident experience of several insurance carriers for the policy year 1919, as reported to the National Council on Workmen's Compensation Insurance, the average compensation cost per compensable case was \$346, and the average total cost per case requiring medical treatment was \$20. These figures are based on 32,825 injuries requiring medical aid of which approximately 1,400 were for compensable injuries. It is estimated that these represent only about 10 per cent of the total industrial eye injuries in the country. The total cost of all injuries amounted to \$671,569, of which the medical cost constituted \$186,603 and the compensation cost \$484,967. Flying particles and objects accounted for 70 per cent of the total injuries and 50 per cent of the total cost. Abrasive wheels produced 10,210 or 31 per cent of the total medical-aid injuries, but only about 9 per cent of the total cost, objects flying from tools handled by the workers account for 9 per cent of the accidents, which represent 15 per cent of the cost;

and flying particles not otherwise classified account for 30 per cent of the accidents and 24 per cent of the cost.

**Report on  
use of lead  
in paints.**

A department committee was appointed by the British Home Secretary in August, 1921, "To re-examine more particularly in the light of further information which has become available since the inquiries of the Departmental Committees in 1911, the question of the danger, from the use of lead paints to workers in the painting trades, and the comparative efficiency and cost, and the effect on the health of the workers of paints containing lead and leadless paints respectively." The report of the committee has recently been issued.

The committee find that zinc base paints, used instead of lead paints have been found very deficient in durability for external painting and for internal painting when subject to rough usage. A process has also been recently discovered, the committee states, for the damp rubbing down of paint, which greatly reduces the danger of dust that is encountered in the old process of rubbing down with dry sand paper. For these reasons the committee do not recommend the entire prohibition of the use of lead paint, but they hold the statistics of lead poisoning from the use of lead paint are sufficiently serious to make it desirable to limit its use as far as practicable and make its use subject to statutory regulations. They accordingly recommend the passing of legislation to give effect to the principles of the draft conventions adopted at the third session of the International Labour Conference which met at Geneva in October, 1921. (The text of this draft convention was given in the issue of the LABOUR GAZETTE for January 1922, on pages 49 and 50.) In connection with this Convention the Home Office in collaboration with the Painters and Decorators' Joint Council has already prepared a code of regula-

tions for the painting of buildings which has been unanimously adopted by both sides of the Joint Council and approved with only a minor reservation by the National Federation of Building Trades Employers. The code is printed as an appendix to the Report and its adoption is recommended by the committee. The committee recommend that the compulsory notification of suspected cases of lead poisoning be extended to suspected cases contracted in the painting of buildings.

**Bibliography of  
industrial  
hygiene.**

The International Labour Office (League of Nations) has begun the issue of a Bibliography of Industrial Hygiene as a quarterly publication, the first number being dated March 1923. A bibliography on the same subject was published by the Office in the *International Labour Review* for May, 1922. The material is arranged in four main groups of references according to the generally accepted classification of periodicals and treatises on industrial hygiene. The first group contains references on industrial hygiene in general in relation to the location, structural arrangements of establishments, and processes of manufacture. It also contains references to medical inspection and industrial hygiene legislation in general. The second group gives references on industrial hygiene for the separate industries and occupations. The third general group considers the hygiene of the individual worker in relation to his occupation, the development being from matters strictly related to the hygiene of the person in and outside the factory, to a consideration of general medical care and welfare work. The last group of references includes all questions of the physiology and pathology of work, covering such points as sickness statistics, fatigue, physiology of the special systems, poisonings, infections, other causes of disease, pathology of the special systems and accidents. In order to make it

accessible to the largest circle of readers, the headings under which the books and articles are grouped are given in three languages: French, English and German; at the same time titles are left in the vernacular. An alphabetical index of authors is added at the end of each issue. The International Labour Office requests experts interested in industrial medicine and public health to send directly to its Industrial Hygiene Section complete bibliographical information on books or articles, as they appear, accompanied, if possible, by a copy of such publications and asks to be notified of any errors or omissions.

**Trade disputes  
in Moscow and  
Petrograd.**

Until 1922, the principle of compulsory labour remained in force in Soviet-Russia, strikes

being illegal, but the new economic policy re-established relations between the workers and private employers, and, at the same time abolished the principle of compulsory labour. This led the trade unions to consider the possibility of resuming the use of the strike as a weapon against the employers. The question was settled at the session of the All-Russian Central Council of Trade Unions, and certain principles there laid down were adopted by the Fifth All-Russian Trade Union Conference in September, 1922. The number of disputes recorded by the trade unions in Moscow and Petrograd in the first nine months of 1922 was 6,250 and the number recorded by the Labour Sections was 1,835, making a total of 8,085, according to information published by the International Labour Office. The number of workers involved in the first case was 81,170 and in the second case 42,367, a total of 123,537.

Conventions of the following Canadian labour organizations and international labour organizations having affiliations in Canada will be held during the months of July and August:

American Flint Glass Workers' Union, at Baltimore, Md., on July 2 to 14.

Amalgamated Lithographers of America, at Cleveland, Ohio, in July.

International Jewellery Workers' Union, at Toronto, Ont. in July.

International Brotherhood of Blacksmiths, Drop Forgers and Helpers, in Kansas City, Mo., on July 9 to 19.

National Brotherhood of Operative Potters, at Atlantic City, N.J., in July.

Piano, Organ and Musical Instrument Workers' International Union, at New York, N.Y., on July 9 to 15.

Glass Bottle Blowers' Association, at Chicago, Ill., on July 9 to 21.

International Stereotypers and Electrotypers' Union at Omaha, Neb., on July 16 to 21.

International Plate Printers and Die Stampers' Union, at Philadelphia, Pa., on July 16 to 23.

Stove Mounters' International Union, at Chattanooga, Tenn., on July 17 to 21.

Canadian Electric Trades Union, at Hamilton, Ont., on August 1.

Federation of Catholic Workers, at Quebec, Que. in August.

United Garment Workers of America, at Detroit, Mich., in August.

International Typographical Union, at Atlanta, Ga., on August 13 to 18.

Hotel and Restaurant Employees' International Alliance and Bartenders' International League, of America, at Chicago, Ill., on August 13 to 20.

International Brotherhood of Electrical Workers, at Montreal, Que. on August 20.

International Photo - Engravers' Union, at Milwaukee, Wis., on August 20 to 26.

By an order-in-Council issued during May under the provisions of the Canada Shipping Act the existing bylaw of the

Pilotage District of Sydney, N.S., relating to Pilots' Eyesight and Hearing Tests, was revised. The new order permits any pilot who fails to pass the regular yearly tests to appeal to the Minister for examination, at his own expense, by a qualified oculist or aurist selected by the Minister. If the result of the re-examination is to confirm the first examination the license shall be cancelled, but if not, the Minister may continue the pilot's license until the next annual examination.

The Department of Labour has received a copy of the Revised Statutes of Alberta, 1922, published in Edmonton under the authority of an act passed in that year to provide for the consolidation and revision of the public statutes of the Province. This is the first consolidation of the Provincial statutes since the province of Alberta was constituted in 1905.

The Department of Health of Canada has begun the issue of a set of publications under the general title of "The Little Blue Books". "The Canadian Mother's Book", Mothers' Series No. 1. of this set has recently appeared. This volume of 136 pages, prepared by Dr. Helen MacMurchy, Chief of the Division of Child Welfare, is written in a popular style with numerous illustrations, and contains full information and advice on the care of infants during their first year.

The New Brunswick Health Department recently issued under the Public Health Act of 1918, a series of new plumbing and drainage regulations which, in addition to laying down rules to be followed in future plumbing work, require plumbers or others in charge to secure a permit from the sub-district board of health before commencing operations. The same Department has issued a new health regulation which requires contractors employing twenty or more workmen who reside at a distance from their work to provide sanitary conveniences which will

be considered by the Medical Health Officer or other local official to be satisfactory.

Acting on a request from representatives of the Brotherhood of Locomotive Engineers and Locomotive Firemen and Enginemen that the use of deckless engines in road service be restricted, the Board of Railway Commissioners for Canada recently issued a ruling that no more of this type of locomotive be put into service on railways under the jurisdiction of the Board, except upon application and approval; and that such locomotives as are now in road service on the different railways be worked into switching service as the opportunity offers. "Deckless engines" are those with boiler back to end of engine frame and wing casting, leaving no foot-plate for enginemen except that provided for on front of tender.

An association of mine operators embracing the coal mines north of the Red Deer River has recently been formed, under the name of the Northern Alberta Coal Operators' Association. It is understood that the new association will deal only with miners who are members of the Canadian Federation of Labour. A charter has already been issued by the Canadian Federation to a local union of miners in that district. The constitution of the local forbids affiliation with the United Mine Workers of America, even on a majority vote of the members.

It is announced that Major J. W. Clark has been appointed to go to London, England, under the Dominion immigration department and to act there in respect to British Columbia immigration.

Announcement has been made of the twentieth economic essay contest for prizes donated by the Chicago tailoring firm of Hart, Schaffner and Marx. First and second prizes of \$1,000 and \$500 are offered to contestants in Class A, and prizes of \$300 and \$200 are offered

in Class B. The latter includes undergraduates of any college in the United States and Canada, while Class A includes any residents of the United States or Canada, without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set. The topics proposed by the committee in charge of the contest are (1) A survey of the world's cotton situation (2) The theory and practice of ship subsidies (3) The sales tax (4) The theory and practice of unemployment insurance (5) What conditions limit the amount of wages that can be paid (6) A comparison of business cycles in the United States, Great Britain and Canada. It is stated, however, that a contestant is not confined to these topics, but any other subject chosen must be approved by the committee of which Professor J. Laurence Laughlin, University of Chicago, is chairman.

A Norwegian law establishing a Compulsory Arbitration Court, which had been enacted for one year in the spring of 1922, lapsed on April 1, 1923. Last February the Government of Norway brought in a bill for the renewal of the Act, but it was rejected by both Houses of the Storting.

A law has been passed in Wisconsin legalizing peaceful picketing off premises where a strike or lockout exists.

The foundation of a labour college in New York has been authorized by the central trades and labour council of that city. Plans for the institution which is expected to open in the autumn, will be drawn by a sub-committee of the council and representatives of the Workers' Educational Bureau, affiliated with the American Federation of Labour. It is stated that the council's decision to enter the educational field was hastened by the report of delegates to the recent convention of the Worker's Educational Bureau that "it is well to warn the workers that many established universities which stand for

the status quo will soon launch labour colleges in order to prevent the establishment of such institutions by labour and under their full control. The establishment of workers' education by those opposed to the best interests of organized labour must not go unchallenged."

A recent act of the Union Parliament of South Africa provides for the appointment of an apprenticeship committee in every industry in the district, composed of an equal number of representatives of employers and employees with an independent person as chairman, which will control the number of apprentices entering industry, determine the period of apprenticeship, and regulate the hours of employment and wages. A clause in the act which is in the form of a contract debars apprentices from joining trade unions till the last year of apprenticeship.

The Philadelphia Building Congress has announced the opening of classes for plasterers' apprentices as part of the trade extension courses at the South Philadelphia High School. The classes are held on Saturdays from 8 to 12 a.m. All apprentices who receive instruction in these classes must be indentured apprentices working at the trade. The employers have agreed to pay the apprentices for their time in attendance at these classes at the regular apprenticeship rate.

Under a decree of October 21, 1922, with regard to collective dismissals of employees in the Czecho-Slovak republic, employers who propose to dismiss a large number of their workers must give at least a week's notice of dismissal. The decree defines the term "collective dismissal" as dismissal within the period of one month of not less than ten per cent of the employees on the payrolls on the first working day of the month in question. The measure does not apply to seasonal workers or to agricultural labourers.

The question of the utilization of leisure by workers has been included in the agenda of the Sixth International Labour Conference to be convened in Geneva, Switzerland, in June of next year. In preparation of the discussion of this subject the International Labour Office is conducting an inquiry throughout the world and will prepare a technical report setting forth all activities for the utilization of leisure in use throughout the world giving examples of typical institutions in the various countries.

The American Newspaper Publishers' Association at their recent convention adopted a resolution by which they refused to negotiate with the International Typographical Union under the terms of an amendment to the union's constitution which provides that union printers and mailers employed in the

same plants should negotiate jointly; that all agreements so reached should expire concurrently, and that abrogation of an agreement by a strike or lockout in one department should terminate the agreement affecting the other. They also decided to broaden the Association's support of printing trade schools, and made provision for the establishment of regional schools in several sections of the United States and Canada, the schools to be supported primarily by newspapers in the various regions.

According to a judgment given in the Chancery Division of the High Court of Justice, London, England, it was decided that a member of the Amalgamated Marine Workers' Union was entitled to inspect the union's books through a qualified accountant.

---

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

### The Labour Situation, Strikes, Prices.

#### The Labour Situation.

**E**MLOYERS' reports at the beginning of May indicated a much more favourable situation than in the preceding month, there being a marked revival of activity in manufacturing, together with seasonal expansion in the outside industries. The level of employment was a great deal higher than at the same period of 1922, and 1921.

At the beginning of May the percentage of unemployment among members of trade unions was 4.6 as compared with 6.8 at the beginning of April and 10.4 per cent at the beginning of May, 1922.

The employment Service of Canada report a gain in the daily business transacted during April, 1923, by the offices in the various provinces as compared with March, while compared with April, 1922, a slightly higher level of employment was maintained.

The following is a brief survey of employment conditions at the end of May, 1923, as noted by the superintendents of the offices of the Employment Service of Canada.

Conditions in the Maritime Provinces were much the same as previously reported. The demand in the farming group continued fairly active and in the building and construction groups the improvement was reflected in the increased number of workers placed. Logging showed a slight decline, although a few vacancies were still registered at St. John, New Glasgow and Amherst.

The demand for labour in Quebec was very active and was most marked in the offices at Montreal and Sherbrooke. Continued calls were received for bushmen and river drivers, while the mining and quarrying districts were busy. In the manufacturing industries

increased activity was noted especially in the steel, brass and textile industries. Road construction, railway maintenance, and the building industry showed expansion, the demand for tradesmen in the latter group exceeding the supply. Vacancies for household workers were received in large numbers with a shortage of applicants.

Ontario offices reported a decided improvement in employment conditions. The numerous demands for labourers and building tradesmen were filled easily while the increase in vacancies for railway maintenance and construction was noticeable. A problem peculiar to most of the offices is the difficulty in securing experienced farm workers in numbers sufficient to meet the demand. The manufacturing industries were active, especially the metal and textile trades. Continued demands were received for river drivers and loggers for Northern Ontario while the mining district near Cobalt showed increased activity.

The demand for farm labor in Manitoba, although brisk, was less urgent than during April and the early part of May. Substantial gains were shown in the building and construction groups although employment in these groups was not so brisk as at the same time a year ago.

In Saskatchewan, the seeding being near completion, the demand for farm workers slackened perceptibly although still very active in some localities. The majority of building tradesmen were employed and vacancies were available for all grades of carpenters and labourers as well as for railway construction and maintenance workers. The supply of women workers for farms was not sufficient to meet the demand.

In Alberta the calls for farm help continued fairly numerous while conditions in the building groups showed much improvement. Railway construction operations and the logging industry absorbed numbers of labourers.

There was renewed employment in the logging industry and allied trades in British Columbia while orders for muckers for quartz and metal mining were received. Fewer calls for farm labourers were registered. The construction groups continued to show improvement, especially in road and railway construction, but few vacancies for building tradesmen were offered.

#### EMPLOYERS' REPORTS

The volume of employment at the close of April increased to a marked extent. The resumption of activity early in the month in railway car and other plants which had been closed down over Easter caused substantial expansion to be indicated in the manufacturing industry. This was supplemented by a decided revival in the construction and other outside industries and by considerable improvement in trade. Firm in all provinces except the Maritimes increased their staffs largely. The gains in Quebec and Ontario were especially pronounced, but in the Prairie Provinces and British Columbia there were also substantial percentage increases.

In all these districts the manufacturing industries absorbed a large share of the increases and considerable improvement was also indicated in construction, transportation, communication and trade. The losses in the Maritime district were slight and were due to the closing of the winter ports, together with contractions in mining and logging.

Montreal, Toronto, Hamilton, Ottawa and Vancouver reported additions to staffs, while in Winnipeg a slight decline was indicated. Manufacturing in Montreal was considerably more active, largely but not entirely owing to the resumption of operations in locomotive shops. The construction, transportation, trade and communication divisions also employed larger working forces. In Toronto there was substantial recovery in biscuit factories and

the employment afforded in meat-packing, iron, steel, printing, gas, and other plants increased. Street railways and building contractors also reported improvement. The increases in Ottawa were general; lumber and paper mills recorded increased activity and construction and transportation also absorbed more men. In Hamilton, garment, hosiery, knitting, cotton, sheet metal, railway car and tobacco factories and building contractors registered larger payrolls. Sugar refineries, lumber mills and building contractors reported the bulk of the expansion in Vancouver. In Winnipeg the decline was mainly due to losses in printing and publishing and in the employment afforded on street railways. An analysis of the returns by industries shows that all branches of the manufacturing division recorded expansion except leather, in which there was a decline. The iron and steel industry, chiefly owing to the resumption of activity in railway car shops, accounted for a large share of the improvement. Automobile, general machinery works and rolling mills also absorbed more employees. Thread, yarn, cloth and knitting mills, pulp, paper, canning, biscuit, sugar, glass, coke, gas, tobacco, chemical, electric current and electrical appliance establishments were busier. The construction, transportation, trade and communication industries reported considerable improvement, the increases in construction, in particular, being pronounced. Further heavy seasonal losses were indicated in logging camps in every province except British Columbia, where large additions to staff were recorded. Coal mining in both eastern and western coal fields afforded considerably less employment, indicating chiefly seasonal curtailment of operations.

An article elsewhere in this issue gives the employment situation during April in some detail.

# TRADE UNION REPORTS

Better conditions prevailed among trade union members at the end of April than at the close of the preceding month and in comparison with the reports for April, 1922 employment was also on a higher level. Returns were tabulated from 1,368 labour organizations with an aggregate membership of 149,536 persons, 6,902 of whom were out of work at the end of April, a percentage of 4.6 as compared with 6.8 per cent at the end of March and with 10.4 per cent at the end of April 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.) More employment than in the previous month was reported in all provinces with the exception of Alberta where considerably less work was afforded coal miners. In comparison with the returns for April, 1922, smaller percentages of unemployment were reported in every district. In the manufacturing industries as manifested by 365 unions with a membership of 43,803 persons, improvement was reported over the preceding month, owing to greater employment for bakers, cigar and tobacco, pulp and paper, furniture, textile, garment, leather, jewelry, glass and iron and steel workers. In the iron and steel group blacksmiths, machinists, moulders and sheet metal workers were more active but boiler-makers and iron shipbuilders, pattern-makers and railway carmen were slightly less fully engaged. The volume of employment in the printing trades was slightly less than in the previous month.

More employment was afforded in the manufacturing industries than at the close of April, 1922. Nova Scotia coal miners were more active than in March but in Alberta a less favourable situation was shown. Quarry workers in Nova Scotia and asbestos miners in Quebec reported no unemployment. Owing to seasonal activity, the situation in the building and construction trades was much more favourable than at the end of March. Steam shovel and dredgemen, bricklayers, masons and plasterers, carpenters and joiners, granite and stonecutters and tile layers, lathers and roofers were busier. Improvement in lesser degree was shown among bridge and structural iron workers, painters, decorators and paperhangers and plumbers and steamfitters. Electrical workers were slightly less active and hod carriers in Manitoba reported considerable slackness. In comparison with the returns for April, 1922 all tradesmen except plumbers and steamfitters and hod carriers were better employed. Slightly more work than in the previous month was afforded by the 531 unions reporting in the transportation industries. Steam railway employees, whose returns constitute over 78 per cent of the total membership reported in the industries were more fully engaged. In the shipping and stevedoring division more idleness was recorded and a nominal change only was reported by street and employment was registered by teamsters and chauffeurs. Employment for retail shop clerks remained on the same level as in the preceding month, but the percentage out of work was slightly higher than that reported at the end of April, 1922. British Columbia fishermen reported considerable improvement. Hotel and restaurant employees and theatre and stage employees were busier and barbers and stationary engineers were also more fully employed.

During the month of April, 1923, the offices of the Employment Service of Canada made 34,172 references to positions and effected a total of 32,933

#### EMPLOYMENT OFFICE REPORTS

placements. Of these, the placements in regular employment numbered 24,047 (20,869 of men and 3,178 of women) and placements in casual work were 8,886. Vacancies reported by employers totalled 42,393 of which 31,811 were for men and 10,582 for women. The number of applications for work was 44,082, of which 33,977 were from men and 10,105 from women. A comparison of the reports for this period with the preceding month show a marked improvement in employment conditions generally and especially in the demand for workers on farms. In contrast with the corresponding month a year ago a slightly brighter outlook is shown, although placements were approximately in the same volume.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during April was higher than in the preceding month and also higher than in April 1922. The estimated value of the permits issued during the month was \$17,544,061 as compared \$8,544,228 in March and with \$14,047,198 in April, 1922.

According to the Canadian Building Review, issued by MacLean Building Reports, Limited, the value of the contracts awarded during April amounted to \$30,843,800 as compared with \$19,954,800 in March and with \$29,428,400 in April of last year. There was, therefore, an increase of 54.6 per cent in the former and 4.8 per cent in the latter comparison. Of the total for the month under review \$1,052,000 or 3.4 per cent, was to be spent in the Maritime Provinces; \$27,304,600 or 88.5 per cent in Quebec and Ontario and \$2,487,200 or 8.1 per cent in the Western Provinces. A further analysis of the total for the month shows that \$11,772,100 was to be spent on residences, \$9,324,900 on business establishments, \$1,176,600 on in-

dustrial buildings and \$8,570,200 on engineering contracts.

#### PRODUCTION REPORTS

The Dominion Bureau of Statistics reports that the output of pig iron during April amounted to 83,877 tons, which was in advance of all monthly records since November 1920 when 93,525 tons were produced. The production for March amounted to 65,297 tons. The output in April exceeded that of the corresponding month of last year by 51,305 tons or 157.5 per cent, and by 26.1 per cent the average for the corresponding month during the three-year period from 1919 to 1921, computed as 66,530 tons. The greatest advance in April was effected in foundry iron which increased from 4,603 tons in March to 22,839 tons; the production of ferro-alloys also increased slightly from 2,213 tons in March to 2,258 tons in April. The cumulative production for the first four months of the present year was 234,163 tons as compared with 140,061 tons during the same period of 1922 and 198,303 tons in the corresponding period of 1921. During April, one additional furnace was in operation at Sault Ste. Marie and one at Port Colborne resulting in a total of nine furnaces in blast.

Steel production in April amounted to 92,598 tons (88,649 tons steel ingots and 3,949 tons steel castings) as compared with 89,088 tons in the previous month and 21,935 tons in April of the previous year. The April output this year was greater than in any month since November, 1920, when the production was 97,120 tons. The monthly average for April during the period from 1919 to 1921 was about 65,000 tons. The cumulative production for the first four months of 1923 was 276,184 as compared with 176,036 tons in the same period of the preceding year.

A report from the Department's correspondent at Cobalt states that five cars containing approximately 326,501 pounds of ore were shipped during April from the Cobalt camp, (including one car from the Keeley Mine, South Lorrain containing 61,195 pounds) as compared with ten cars containing 746,345 pounds in the previous month. The Nipissing mine shipped 264 bars containing 304,177.92 ounces of silver, and the Mining Corporation of Canada shipped 253 bars containing 254,979.42 ounces, making a total of 517 bars containing 559,157.34 ounces for the month of April as compared with 479 bars containing 514,430.85 ounces in the previous month.

A report from the British Columbia Forestry Branch shows that 202,364,967 feet B.M. of timber was scaled in that province during April. The total includes Douglas fir, 92,021,648 feet; red cedar, 47,268,508 feet; hemlock, 24,651,593 feet; spruce, 9,946,909 feet; balsam, 4,316,458 feet; jack pine, 11,516,997 feet; yellow pine, 6,464,305 feet; white pine, 1,774,844 feet; larch, 4,168,944 feet; cotton wood, 198,965 feet; and other species, 35,796,798 feet.

The gross earnings of the Canadian National Railways (including Grand Trunk Railway and electric lines) according to a preliminary statement issued, amounted to \$20,239,921. April the gross earnings of the first four months of 1923 amounting to \$72,978,908.

The gross earnings of the Canadian Pacific Railway for April were given in a preliminary statement as \$13,651,494 in comparison with \$12,331,371 in the previous year; and for the four months ending April 30, 1923, as \$51,546,046 as compared with \$48,820,665 for the same period in 1922.

### Strikes.

The time loss due to industrial disputes reported to the Department during May was greater than during April but less than during May, 1922. There were in existence at some time or other during the month 34 disputes, involving 4,707 employees and a time loss of 65,188 working days, as compared with 22 strikes in April, involving 2,263 employees and a time loss of 34,553 working days. In May, 1922, there were recorded 31 disputes involving 13,433 employees with an estimated time loss of 279,857 working days. At the beginning of May there were on record 17 disputes, involving 1,227 employees. Seventeen new disputes commenced during May involving 3,480 employees with a time loss of 35,108 working days. Four of the strikes commencing prior to May twelve of those commencing during May terminated during the month. At the end of the month, therefore, there were 18 disputes involving 2,101 employees.

### Prices.

The movement in wholesale prices during May continued upward, the index number again showing an increase over the previous month while the family budget in terms of retail prices continued to fall, being lower at the beginning of May owing to a seasonal fall in the prices of dairy products especially butter.

In wholesale prices the index number stood at 228.5 for May as compared with 227.4 in April; 226.1 for May,

1922; 247.3 for May, 1921; 356.6 for May, 1920 (the peak); and 136.3 for May, 1914. The rise was due to seasonal changes in sugar, potatoes, cattle, and fish and there were seasonal decreases in dairy produce, while grain also declined. Important advances also occurred in textiles and in raw furs while fuel and building materials showed some substantial declines. Compared with a year ago the groups Grains and Fodder, Animals and Meats, Fruits and Vegetables, Fuel and Lighting, House Furnishings, and Drugs and Chemicals were lower. All the other groups were higher.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.36 at the beginning of May as compared with \$10.64 at the beginning of April; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914.

Including the cost of fuel and rent with that of foods the figures averaged \$20.89 as compared with \$21.21 for April; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); and \$14.21 for May, 1914. In foods butter declined violently while eggs, milk, cheese, mutton, bacon, and evaporated apples showed smaller declines. The chief advances occurred in sugar, sirloin steak, potatoes, and tea. Fuel was again slightly lower while rent advanced in a small number of cities and declined in others.

## CANADIAN IMPORTS AND EXPORTS DURING APRIL, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of April, 1922 and 1923, and the exports, domestic and foreign,

of similar classes of goods for the same period.

The following table shows imports, free and dutiable, and the exports, domestic and foreign, of the various classes of products, for the month of April, 1923.

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
	\$	\$	\$	\$
Agricultural and vegetable products, mainly foods	1,740,253	6,337,903	15,004,829	51,931
Agricultural and vegetable products, other than foods	2,856,443	2,250,299	1,664,748	67,387
Animals and animal products.....	1,347,643	1,704,286	5,911,201	62,246
Fibres, textiles and textile products.....	5,884,150	8,691,483	531,895	132,388
Wood, wood products and paper.....	1,417,203	1,838,281	17,392,355	27,249
Iron and its products.....	1,357,864	12,831,970	5,164,116	152,833
Non-ferrous metals and their products.....	1,417,147	2,224,250	3,645,091	29,720
Non-metallic minerals and products.....	5,625,130	5,563,400	2,153,207	21,391
Chemicals and allied products.....	890,730	1,144,338	1,072,445	14,104
Miscellaneous commodities .....	1,166,158	1,852,382	1,101,864	126,576

In April, 1923, the duty collected amounted to \$10,320,778 as compared with \$9,124,225 in April, 1922.

The following comparative table shows the values of merchandise entered for consumption and the merchandise, domestic and foreign, exported in the months of April 1922 and 1923.

	Month of April	
	1922	1923
Merchandise entered for consumption.....	\$ 47,695,454	\$ 68,181,320
Merchandise, domestic, exported	31,917,500	53,642,251
Total .....	79,612,954	121,823,571
Merchandise, foreign, exported..	734,541	685,825
Grand total, Canadian trade .....	80,347,495	122,509,396

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MAY, 1923.

**D**URING the month of May the Department received reports of five Boards of Conciliation and Investigation established to deal with disputes between (1) The Canadian National Railways, Western Lines, and certain of its employees being engineers, cranesmen, firemen and watchmen, members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6; (2) The Canadian Pacific Railway Company, Western Lines, and certain of its employees being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6; (3) The Brantford Municipal Railway Commission and certain of its employees being street railway workers, members of local Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America; (4) The Ottawa Electric Railway Company and certain of its employees being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America; and (5) The Shipping Federation of Canada and Canadian Pacific Steamships, Limited, and certain workmen being checkers and coopers, members of Lodge No. 927, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

### Applications Received

During the month two applications for the establishment of Boards of Conciliation and Investigation were received as follows:

(1) From employees of the City of Calgary being policemen, members of the Calgary City Policemen's Protective

Federal Union No. 6. As this dispute did not fall directly within the scope of the Act, the consent of the employer was necessary before a Board could be established. The corporation of Calgary did not consent to the establishment of a Board, and the matter in dispute was instead referred to a local board of arbitration, and satisfactorily adjusted.

(2) From employees of the Canadian National Telegraphs, being members of the Canadian National Telegraphs, System Division No. 43, Commercial Telegraphers' Union of America. A Board was established and Messrs. F. H. Markey, K.C., Montreal, and David Campbell, Winnipeg, nominees of the employer and men respectively, were appointed members of the Board. The chairman of the Board had not been appointed at the end of the month.

### Other Proceedings Under the Act

In the case of a dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees being checkers and coopers, members of Lodge No. 927, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, members of a Board were appointed as follow: Mr. E. McG. Quirk, Montreal, chairman, appointed by the Minister in the absence of a recommendation from the other members of the Board, Mr. Bernard Rose, Montreal, appointed by the Minister in the absence of a recommendation from the employers, and Mr. J. G. O'Donoghue, K.C., Toronto, nominee of the employees.

## Report of Board in dispute between the Canadian National Railways, (Western Lines) and its steam shovel and dredge men.

A report was received from the Board established to deal with the dispute between the Canadian National Railways (Western Lines) and certain employees being engineers, cranesmen, firemen and watchmen, members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6. The Board was composed as follows: Mr. W. H. Trueman, K.C., Winnipeg, chairman, appointed by the Minister in the absence of a recommendation from the other two members Messrs. C. E. Dafeo and David Campbell, both of Winnipeg, nominees of the railways and employees respectively. The report was unanimous and contained recommendations as to a settlement of the dispute.

The text of the Report is as follows:

### Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian National Railways (Western Lines), Employers, and certain employees being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6.

Winnipeg, Man.,  
23rd May, 1923.

The Honourable,  
The Minister of Labour,  
Ottawa.

Sir,

The Board constituted herein begs leave to report as follows:

Sessions of the Board were held on January 29th, February 2nd, 19th and 23rd, March 2nd, 3rd, 5th, 7th and 8th, April 2nd, 3rd, 9th, 10th and 12th, and May 5th, 18th, 21st, 22nd and 23rd, 1923. The employees were represented by Messrs. J. E. Sims, J. L. Driscoll and Alexander Robertson, and the Canadian National Railways were represented by Messrs. A. A. Tisdale, J. W. Crane and S. McElmoyle.

The main question in dispute, exclusive of certain differences as to working conditions, is one of wage reduction affecting engineers, cranesmen, firemen and watchmen employed on or in or about steam shovels, ditchers, clamshells and locomotive cranes. Related thereto is a submission that a differential rate of wage as between steam shovel and ditcher engineers adverse to the latter is without justification, and restoration of wages of both classes to the equal rates in force prior to May 1st, 1921, is asked. The employer among other contentions submitted that the railways represented by it had never had any schedule agreement or contract with the International Brotherhood of Steam Shovel and Dredge Men, and that there was no schedule agreement covering the employees in question except ditcher engineers, who, it was said, are embraced in Wage Agreement No. 5 and supplements thereto entered into by the Railway Association of Canada and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

For the employees it was replied that the ditcher engineers were not a party to the agreement on the ground that they are not affiliated with the United Brotherhood of Maintenance of Way Employees who were unauthorized to represent them. It was also pointed out that the ditcher engineers represented an inconsiderable proportion of the employees concerned. The inclusion of ditcher engineers in the wage schedule in Agreement No. 5 is due to their inclusion in Wage Agreement No. 2 made between the Canadian Railway War Board and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers, in respect to increase in rates of pay and certain conditions of service in conformity with the terms of Supplement No. 8, General Order 27 of the Director General, United States Railroad Administration, for

employees in the Maintenance of Way Department, and effective on the railways therein named, and to their inclusion in Wage Agreement No. 3 made between the same parties. By a ruling of the Canadian War Board dated January 7th, 1919, it was held that steam shovel engineers, cranesmen, firemen and similarly engaged employees are covered by Agreement No. 2. It was therefore the position of the employer before this Board that resting upon these facts the railways could properly apply to the employees in question the provisions of the Maintenance of Way Agreement entered into with the Railway Association.

The examination of the issue thus raised was represented in a great deal of evidence and discussion. Four general officers of the United Brotherhood of Maintenance of Way Employees gave testimony, in which they definitely admitted the Brotherhood did not represent the employees in question. This evidence was not refuted by the employer.

It is therefore the finding of the Board that the employees were not adequately represented at the conferences between the Railway Association of Canada and

the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers in which said Wage Agreement No. 5 was prepared. The Board therefore recommend that reductions in wages should only be made in conformity with the Industrial Disputes Investigation Act; that reductions affecting employees in question should be on the average and in the aggregate in accordance with reductions in wages of other employees made during and since 1921, having regard to the class of work performed, and that the consideration of said reductions and all matters pertaining to wages and working conditions be the subject of conference and negotiation between the railway management and a duly authorized committee of the employees.

It is considered that the findings and recommendations of the Board make it possible for the employer and employees to dispose of, in conference, all matters in dispute.

Respectfully submitted,

(Sgd.) W. H. TRUEMAN,  
Chairman,  
C. E. DAFOE,  
D. CAMPBELL.

### **Report of Board in Dispute between the Canadian Pacific Railway Company (Western Lines) and its steam shovel and dredge men.**

A report was received from the Board established to deal with the dispute between the Canadian Pacific Railway Company (Western Lines) and certain of its employees being members of the International Brotherhood of Steam Shovel and Dredge Men District No. 6. The Board was composed of Mr. W. H. Trueman, K.C., Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Mr. C. E. Dafoe, Winnipeg, appointed by the Minister in the absence of a recommendation from the Company, and Mr. David Campbell, Winnipeg, nominee of

the employees. The report was unanimous and contained recommendations as to a settlement of the dispute.

The text of the Report is as follows:

#### **Report of Board**

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian Pacific Railway Company and certain employees, being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6.

Winnipeg, Man.,  
23rd May, 1923.

The Honourable,  
The Minister of Labour,  
Ottawa.

Sir,

The Board constituted herein begs leave to report as follows:

Sessions of the Board were held on May 7th, 9th, 10th and 23rd, 1923. The employees were represented by Mr. J. E. Sims. The Canadian Pacific Railway Company declined to attend sittings of the Board. Attached hereto is a letter of Chairman of Board notifying Canadian Pacific Railway Company of date of hearing and company's letter in reply. The questions involved in the dispute are the same as raised in dispute between the Canadian National Railways (Western Lines) and certain employees, also members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6, referred to this Board and covered by its report of even date herewith. Certain portions of the evidence given on the hearing of the last mentioned dispute were relevant to the matters in issue herein and have been made use of by the Board in connection with its disposition of the subject matter principally in dispute herein.

The important question submitted to the Board, exclusive of certain differences as to working conditions, is one of wage reduction affecting engineers, cranesmen, firemen and wathmen employed on or in or about steam shovels, ditchers, clamshells and locomotive cranes. Related thereto is a submission that a differential rate of wage as between steam shovel and ditcher engineers adverse to the latter is without justification, and restoration of wages of both classes to the equal rates in force prior to May 1st, 1921, is asked. The employer by letter dated October 1st, 1922, addressed to the Honourable the Minister of Labour, submitted among other contentions that engineers and firemen on ditchers, clamshells, locomotive cranes

and steam shovels are specifically covered by Wage Agreement No. 5 and supplements thereto governing service of maintenance of way employees and shop labourers.

For the employees the position was taken before the Board that ditcher engineers are alone mentioned in the said wage agreement and supplements and that they are not a party to the agreement as they are not affiliated with the United Brotherhood of Maintenance of Way Employees, who are therefore unauthorized to represent them. It is also pointed out that the ditcher engineers represented an inconsiderable proportion of the employees concerned. The inclusion of ditcher engineers in the wage schedule in Agreement No. 5 is due to their inclusion in Wage Agreement No. 2 made between the Canadian Railway War Board and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers, in respect to increases in rates of pay and certain conditions of service in conformity with the terms of Supplement No. 8, General Order 27 of the Director General, United States Railroad Administration, for employees in the Maintenance of Way Department, and effective on the railways therein named, and to their inclusion in Wage Agreement No. 3 made between the same parties.

The examination of this issue, which was also the subject in large part of the dispute between the Canadian National Railways and the same class of employees, was represented in a great deal of evidence before the Board on the hearing of the last mentioned dispute as well as in the proceedings herein. Four general officers of the United Brotherhood of Maintenance of Way Employees gave testimony, in which they definitely admitted that the Brotherhood did not represent the employees in question in negotiating said wage agreements. This evidence is not contradicted by the employer.

It is therefore the finding of the Board that the employees were not adequately represented at the conferences between the Railway Association of Canada and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers in which said Wage Agreement No. 5 (and Supplements) was prepared. The Board therefore recommend that reductions in wages should only be made in conformity with the Industrial Disputes Investigation Act; that reductions affecting employees in question should be on the average and in the aggregate in accordance with reductions in wages of other employees made during and since 1921, having regard to the class of work performed, and that the consideration of said reductions and all matters pertaining to wages and working conditions be the subject of conference and negotiation between the railway management and a duly authorized committee of the employees.

It is considered that the findings and recommendations of the Board make it possible for the employer and employees to dispose of, in conference, all matters in dispute.

Respectfully submitted,

(Sgd.) W. H. TRUEMAN,  
Chairman,  
C. E. DAFOE,  
D. CAMPBELL.

Winnipeg, 7th May 1923.

Re C. P. R. (Western Lines) and certain of its employees being members of the International Brotherhood of Steam Shovel Shovel and Dredge Men, District No. 6.

C. Murphy, Esq.,  
General Manager,  
Canadian Pacific Railway Company,  
Winnipeg.

Dear Sir,

As Chairman of the Board of Conciliation instituted by the Minister of Labour in this matter, I have to advise you that I have fixed Wednesday, 9th May, 1923, at the hour of 2.30 o'clock in the afternoon at room on the second floor of the Legislative Building, Winnipeg which room is situate opposite the

office of Mr. Healy, Librarian, for the hearing of said matter.

Yours truly,  
(Sgd.) W. H. TRUEMAN.

CANADIAN PACIFIC RAILWAY COMPANY  
Western Lines

Winnipeg, Man.,  
8th May, 1923.  
93326.

His Hon. Judge Trueman,  
New Law Courts,  
Cor. Kennedy & Broadway,  
Winnipeg, Man.

My dear Judge,

Referring to our conversation.

Following are copies of two wires forwarded by the Vice-President to the Deputy Minister of Labour, in connection with the request for a Board of Conciliation as applied for by the International Brotherhood of Steam Shovel and Dredge Men. These two messages fully set out the viewpoint of the company.

Message of January 12th:

"Your letter fifth instant, regarding appointment Board of Conciliation Steam Shovel and Dredge Men. Beyond two or three individual communications from employees regarding certain changes in rates of pay we have not had any application from employees making up steam shovel crews with reference at any alleged grievances with respect to working conditions or other matters. While we are always prepared to meet our employees or join in conciliation proceedings in such matters if proper negotiations have brought about any disagreement, under all the circumstances as they exist in this case, I regret that I cannot consistently agree to take any action towards appointment of representative for this company on proposed joint Board of Conciliation. In my opinion, as far as this company is concerned, a disagreement does not exist with our employees developed by negotiations as provided for by the Act."

Message of January 17th:

"Your telegram thirteenth regarding appointment Board Conciliation Steam Shovel and Dredge Men. We still take the position that we have not had any submission with respect to rates of pay after these employees were given explanations as to reasons for reductions applied. We submit that it is not the intention of the Act that a Board should be appointed in such circumstances and must respectfully decline to name a representative on any Board which may be appointed."

Yours truly,  
(Sgd.) C. MURPHY,  
General Manager.

## Report of Board in dispute between the Brantford Municipal Railway Commission and certain of its employees.

A report was received from the Board established to deal with a dispute between the Brantford Municipal Railway Commission and certain of its employees, being street railway workers, members of Local Division No. 585, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed as follows: Mr. J. G. O'Donoghue, K.C., Toronto, chairman, appointed by the Minister on the joint recommendation of the other two members of the Board, Messrs. F. H. McGuigan and James Simpson, both of Toronto, nominees of the Commission and employees respectively. The report was unanimous and was accompanied by the copy of an agreement signed by both parties.

The text of the Report and Agreement is as follows:

### Report of Board

Toronto, May 22nd, 1923.

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Brantford Municipal Railway Commission (Employer) and certain of its employees being street railway workers, members of Local Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America, (Employees).

The Honourable

The Minister of Labour,  
Ottawa, Ont.

Sir,

The undersigned members of the Board of Conciliation and Investigation appointed by you in this matter beg to report as follows:

Meetings of the Board were held at Toronto on May 3rd, 4th and 22nd, and at Brantford on May 15th, 18th and 21st.

The following appeared before the Board to present the respective claims:

For the Commission: F. J. Calbeck, Esq., Chairman; C. H. Hartman, Esq., Member; J. Hill, Esq., Member; J. Foster, Esq., Manager.

For the Employees: Patrick Walsh, President of Local Division No. 685; C. B. Forsyth, Financial Secretary; F. S. Vinal, Executive Board Member; W. Jennings, Vice-President, Amalgamated Association.

The parties were heard at length, and as a result of the good feeling displayed by all parties, prompted as they were by a sense of fairness towards one another, the Board was enabled to bring them together in the agreement, a copy of which is attached hereto. Special circumstances that need not be referred to here governed both parties in their attitude towards each other. The net result will be found in the agreement.

We have the honour to be,

Yours sincerely,

(Sgd.) J. G. O'DONOGHUE,

Chairman.

F. H. MCGUIGAN,

For the Commission.

JAMES SIMPSON,

For the Employees.

AGREEMENT made this twenty-first day of May A.D., 1923, between: the Brantford Municipal Railway Company and the Brantford Municipal Railway Employees' Union, of the City of Brantford.

The following rules and rates of pay become effective on the first day of April, 1923, and continue in effect for one year, and from year to year thereafter, except upon thirty days' notice in writing by either party of their desire for a change:

1. The Commission agrees to meet and treat through their proper officers with the representatives of the employees should any differences arise during the term of the agreement.

2. No objection or discrimination shall be made in case of employees who are or may become members of any organization.

3. Nine hours shall constitute a day's work, and which shall be performed in nine consecutive hours, wherever practicable, but not to exceed twelve hours in any event.

4. Time and a half shall be paid for all hours worked in excess of nine hours.

5. Regular scheduled runs shall pay a minimum of nine hours per day, except when power is not available, or the Commission may be unable to operate cars due to causes beyond their control, in which case employee, shall be paid only for the time on duty.

6. The Commission will furnish yearly on or before the first day of October uniforms consisting of one coat, one vest and two pairs trousers to motormen and conductors who have been in the service continuously for two years and over. Men who have been in the service for less than two years shall pay half the cost of the uniform provided. Any employees voluntarily leaving the service within one month after receiving the uniform shall pay half the cost, and, if within two months, shall pay one-quarter.

7. Conductors shall be provided with \$25.00 for tickets and change and shall have the full amount upon his person at all times while on duty.

8. The assignment of regular runs shall take place every six months or oftener as may be found necessary. Senior men shall have the first choice of runs. For Bus line service men considered most suitable may be selected.

9. In the event of a reduction of force being found necessary, junior men shall be laid off in order of length of service and shall be re-employed according to seniority when vacancies shall occur.

10. In the event of any employee being suspended or discharged he shall have the right to a hearing at which he may be assisted by a Committee of his fellow employees, and, in the event of being found not guilty, he shall be reinstated to his former position and be paid for all time lost.

11. An extra three cents per hour shall be paid for the training of students.

12. The wages of motormen and conductors shall be:

1st year service 46 cents per hour.

2nd year service 48 cents per hour.

3rd year service and over 50 cents per hour.

Witness, Brantford Municipal Railway Commission.

(Sgd.) F. J. CALBECK, Chairman.

Witness, Brantford Electric Railway Employees' Union.

(Sgd.) PATRICK JOSEPH WALSH, President.

### Report of Board in dispute between the Ottawa Electric Railway Company and certain of its employees.

A report was received from the Board established to deal with the dispute between the Ottawa Electric Railway Company and certain of its employees, being members of Local Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed of Mr. J. T. Costello, Alexandria, Ont., chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. George D. Kelley and Hal. J. Burns, both of Ottawa, nominees of the Company and employees respectively. The report was signed by the chairman and Mr. Hal. J. Burns, and contained recommendations for the settlement of the dispute. A minority report signed by Mr. George D. Kelley, representative of the Company, was also received.

The text of the Board's report is as follows:

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Ottawa Electric Railway Company and its employees, members of Division 279, Amalgamated Association of Street and Electric Railway Employees of America.

Ottawa, June 1st, 1923.

To the Honourable James Murdock,  
Minister of Labour,  
Ottawa, Canada.

Sir:—

The Board of Conciliation appointed in this matter and consisting of F. T. Costello, Barrister, Chairman, Geo. D. Kelley, Barrister, representing the company, and Hal. J. Burns, Barrister, representing the employees, met at the

City of Ottawa on the 4th day of May, 1923, and has been in daily session since.

The company was represented by Major F. D. Burpee and Mr. A. J. Tobin, and the employees by Messrs. William P. Jennings, International Officer, F. W. McRae, President, and Ed-O'Connor and J. C. Davidson of the local Association of Employees.

Through the courtesy of His Worship Frank H. Plant, Mayor of the City of Ottawa, the Board held its open meetings in the City Hall.

At the first open meeting held by the Board on May the 8th, the Chairman read the instruments under the seal of the Department of Labour appointing himself, Mr. Kelley and Mr. Burns as members of the said Board.

The matter of the demands of the men was then proceeded with.

On Wednesday, May the 9th, when the Board again resumed its sittings, the Chairman took the occasion of pointing out to the representatives appearing before the Board that this Board was a Board of Conciliation and not of Arbitration and that it was apparent that a great number of difficulties existed between the employees and the company that could be amicably arranged by a conference between them, and suggested that the spirit of conciliation should exist as far as was possible and reasonable in their conference and recommended that the representatives of the company and employees meet together and arrange as far as possible what might be agreed upon.

On Tuesday, May the 15th, the Board again resumed its open sittings, and the representatives of the company and the employees reported that they had agreed in all matters excepting on the hours of labour and working conditions and wages.

It developed early in the presentation of evidence on behalf of the employees that some suggestion should be made by

this Board in order to remedy the length of time which an employee was forced to work in order to complete the required number of hours for his day's work. It was submitted that strong recommendations were to be found in the reports of previous boards advocating that a reduction be made in the number of hours of the spread, but seemingly no serious effort had been made to do so. In fact the company's representatives admitted that in the case of a nine-hour working day it was practically impossible to arrange the spread differently, although admitting that the long spread would not exist in the case of an eight-hour day. This at this meeting of the Board and at subsequent ones, led to the discussion of the demand of the employees for an eight-hour day which was really the main question in dispute.

It was submitted that the eight-hour day was a provision incorporated in the recommendations of the League of Nations as a matter of importance as a standard to be arrived at where it has not already been enforced; that at a great number of international and national industrial conventions it was very strongly advocated and endorsed.

On behalf of the company it was represented that the nine-hour day was ideal for the operation of a street railway, as practically speaking there was eighteen hours of operation. The only other objection was the matter of the increased expense to arrange for the inauguration of the eight-hour day. The representatives of the company further pointed out that there has been for some time a ten-minute-paid-for allowance for "Pull Out" and "Pull In", making an allowance of twenty minutes per diem for which the company paid but which was not actually worked. This Board recognizes the necessity, particularly with respect to street railways, of the employees arriving at their work promptly on time so that they may take out the car which they are to operate for the day strictly according to schedule, and consequently recognizes the

necessity of the men being at the sheds before the time allotted for the commencement of their run. In view of this and in view of the evidence submitted on behalf of the company and on behalf of the employees, this Board recommends the establishment of the principle of the eight-hour day on the Ottawa Electric Railway, but would recommend that this be actual platform time, i.e., to be from the actual time a run is started from the shed until the run is completed at the shed. This Board further recognizes that in the business of a street railway it is impossible to adhere to a strict eight-hour day, and in view of this further recommends that, where a run can be completed within twenty minutes in excess of the eight hours, the same shall be worked by the men and shall be paid for by the company at only regular rates. Only where a man works a period in excess of eight hours and twenty minutes shall he be paid overtime, and then he shall be paid time and one half over the eight hours.

The question of the spread of time is another case where the Board feels that the company is experiencing considerable difficulty, having regard to the fact that at certain times of the day it is necessary to provide a great number of cars for the convenience of the public which are not used at other times during the day when the traffic is light in comparison, and for that reason the Board does not consider the demand of the men that the work be completed in ten consecutive hours feasible and would therefore recommend that the work, where possible, be completed in ten consecutive hours, but in no case is the spread to exceed twelve hours. This recommendation is made particularly in view of the fact that the representatives of this company have stated that the establishment of the eight-hour day would do away largely with the spread which exists to-day and which in some cases extends over a period of fourteen hours.

In regard to the demand of the employees for an increase of 25 per cent in wages, the Board, from the evidence submitted, finds that the cost of living has increased somewhat, but, because of the financial burden which the inauguration of an eight-hour day would impose upon the employing company, would recommend an increase only of six cents per hour, which would bring the older employees up to the daily wage which they are at present receiving for a day of nine hours, and we would suggest the following table of wages:

*Motormen and Conductors*

1st Year.....	.50
2nd Year.....	.52
3rd Year.....	.53
4th Year and after.....	.54

This increase of six cents an hour should apply to all employees excepting those now receiving less than 44 cents, and as to these the rate of wages should be increased in proportion only.

One point stressed by the representatives of the company was that the establishment of the eight-hour day and increase in hourly wages would entail such a financial burden on the company that the profits of the company would be cut down to nothing or they might meet with serious loss. The company is now obligated to the City for five years to maintain the five-cent fare generally. In our opinion this is not a matter for our consideration. These are matters that may be adjusted by an appeal to the Board of Railway Commissioners of Canada. The company have already appealed to the Board of Railway Commissioners on other occasions. If necessity is shown for an increase of fares, such may be granted on proper evidence. In such an application the public may be amply protected by representation before the Board of Railway Commissioners.

This Board would recommend that the finding of this Board be retroactive from

the first of May, 1923, when the agreement of 1922 between the Company and the employees lapsed.

This Board recommends that the draft agreement as submitted to us be amended so as to include the above recommendations and findings and be entered into by the company and employees for a period of one year from the first of May, 1923.

(Sgd.) F. T. COSTELLO,  
Chairman.

H. J. BURNS,  
Member of Board.

#### Minority Report.

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Ottawa Electric Railway Company and its employees, members of Division 279, Amalgamated Association of Street and Electric Railway Employees of America.

To the Honourable James Murdock,  
Minister of Labour,  
Ottawa, Canada.

Sir:—

I have given careful consideration to the evidence and arguments submitted before the Board of Conciliation and Investigation appointed to deal with the dispute between the Ottawa Electric Railway Company and certain of its employees and I am unable to agree with the other members of this Board in their findings made thereon.

Practically nothing new was laid before this Board. The employees submitted a draft of a proposed agreement containing a number of clauses in regard to which no real dispute existed. After different meetings, the only matters left for the Board to dispose of were those having reference to wages and hours of labour (including therein working conditions). It was not seriously argued that there had been any appreciable change in the cost of living since the

report of the last Board appointed to deal with the relations between the parties to the present Board. At the time that the wages of the employees of the Ottawa Electric Railway were last reduced, although the cost of living had fallen 24 per cent, the employees were only asked to accept a reduction in their wages of 12½ per cent. Before this Board the employees fell back upon the argument that even if their wages had not been decreased by a percentage equal to the percentage shown as being the decrease in the cost of living, the wages received by them had not at any time been wages that were commensurate with the cost of living.

The company in its argument submitted figures showing that the increases granted to the employees of the Ottawa Electric Railway, taking the Dominion of Canada as a whole, were higher by some 7 per cent than relative increases granted elsewhere. Bearing in mind that conductors and motormen of the Ottawa Electric Railway are furnished with certain clothing and equipment and with free transportation, the following analysis of the payroll of the company for the year ending March 31st, 1923, should be of interest as showing the earnings of conductors and motormen:—

Number of Conductors and Motormen	Average Age	Years of Experience	Average earnings with clothing and transportation
93	32	Under 5 years	\$1,427
109	36	6 to 10 years	\$1,444
86	40	11 to 15 years	\$1,488
55	44	16 to 20 years	\$1,480
41	55	Over 20 years	\$1,462

The above table includes all of the men who are in regular employment; it does not include spare men. It was emphasized by the company that while

its staff of conductors and motormen was generally recognized as being courteous and capable, the duties which they were called upon to perform were of a very light nature. It can scarcely be argued that the employees should be considered skilled workmen since a training period of from sixty to one hundred hours is sufficient to enable any of them to enter upon the active performance of their duties.

The company also submitted a table showing that the wages of its conductors and motormen taken on a yearly basis were higher than those actually received by the different skilled classes of workmen in this city including carpenters, bricklayers, etc. No attempt was made to controvert the statement so submitted.

During the progress of the present Board a peculiar situation arose, and which has a considerable bearing on the present dispute. An adjournment of this Board was granted in order that the representative of the employees who was presenting their case might proceed to Brantford, Ontario, to there present the case of the employees before a Board constituted to deal with a dispute between the employees of the Electric Railway operated in Brantford and the Commission operating it. The same evidence as presented to our Board was thus available for the Brantford Board, the Chairman of which was J. G. O'Donoghue, K.C. of Toronto, who has for many years acted as legal representative of different labour bodies and who should not be considered as prejudiced in favour of any body of employers. Mr. O'Donoghue and the other two members of this Board, after full consideration, fixed the wage rate for the employees in Brantford at 50c per hour. These employees operate what are commonly known as one-man cars. Employees in such an occupation usually receive five cents per hour more than that paid on cars operated by two men. Deducting this extra allowance would leave the wage rate

unanimously agreed upon in Brantford at 45c per hour. If the employers, employees and three members of the Brantford Board were mutually agreeable to this settlement, it is difficult to see why on the same evidence and with no suggestion of different existing conditions the present Board should advise that an increase should be granted of 6c per hour in Ottawa.

From the material before this Board it would appear that an increase of one cent per hour in the wages of the employees of the Ottawa Electric Railway is equivalent to an increase of \$19,239.94. The increase recommended by the majority report therefore takes from the company a sum of in the vicinity of \$120,000. While the income of the company is not the only standard by which wages should be governed, yet it is fair to consider what is its financial position. As is shown by different reports of experts, the present value of the company's assets is somewhere between \$4,500,000 and \$5,000,000 the actual cash investment as of March 31st, 1923, being \$4,220,762.52. The net profits for the company for 1922 were \$278,914; for 1921 \$235,615; for 1920 \$282,250, making an average for these three years of \$265,593.

The company further submitted a statement showing that for the twelve months preceding March 31st, 1923, in eleven months there had been a decrease in revenue, and in only one month has a small increase been shown. Subtract the additional financial burden that will be placed upon the company from the net profits as shown above and it is seen that the company, if it is to continue to operate and to make any returns to those who have invested their capital therein must obtain an increased revenue, and this can only be done by increasing the fares to be paid by the public of the City of Ottawa. The company cannot put such an increase in force unless the municipal corporation of the City of Ottawa agrees thereto. The members of this

Board presenting a majority report realized this, and, though they pass it over very lightly, it seems to me that the general public of the City of Ottawa are entitled to have this phase of the present dispute given most serious consideration. The interest of the general public as I pointed out at the Board sessions appeared to be almost entirely disregarded. I venture to say there are many thousands of men engaged in different callings of life in Ottawa whose incomes are not as high as those at present paid to motormen and conductors of the Ottawa Electric Railway. The statement submitted by the company before this Board covered many classes of such persons. Is it to be thought for a moment a suggestion would be welcomed by these men to further tax their present earnings by levying a higher rate for street car transportation? Nothing is easier than for any Board of Conciliation appointed to deal with a dispute to consider it has settled the same simply by granting the demands made. The interest of the public should enter into all decisions and especially where a public utility is concerned and practically the Ottawa Electric Railway is such a public utility.

The question of wages is difficult to separate from the question of hours, and the eight hour day was discussed in a very general way. It was admitted that such a work day does not prevail upon the electric railways operated in Canada except in a few isolated cases. The employees argued that (a) postmen, civic firemen and civic policemen in Ottawa had an eight hour day and therefore street railway employees should also have it; (b) that the work done by motormen and conductors of the Ottawa Electric Railway Company was of such an onerous nature that it tended to shorten the lifetime of those engaged in it. Neither of these arguments appear to me to have very much weight. The latter one is scarcely borne out if reference is made to the table set out earlier in this report which

shows that forty-one of the company's conductors and motormen have been in the service over twenty years, their average age being over 55 years; that 55 have been in the service from 16 to 20 years with an average age of 44 years and that 86 have been in the service of the company from 11 to 15 years with an average age of 40 years. It was also established that on a percentage basis the number of men leaving the employment of the company in Ottawa was lower than the percentage that prevailed in almost all the other cities in Canada. Many of the employees over 45 years of age had actual earnings running up to, in one case, the sum of \$1,901, which figure includes allowance for clothing and free transportation.

The Brantford Board hitherto referred to, which had the advantage of the same evidence as that presented to our Board, unanimously agreed that the eight hour day was not necessary. The representative of the employees presenting their case before our Board also appeared before the Brantford Board and it is difficult for me to appreciate how he can seriously argue urgent necessity of the eight hour day being established in Ottawa, when during the sittings of this Board the parties whom he represented in Brantford and who belonged to the same Association as those whom he represented in Ottawa were satisfied to accept the nine hour day. Surely a certain amount of consistency should be shown.

The representative of the company pointed out that the establishing of an eight hour day meant a heavy additional expense to the Ottawa Electric Railway that could not be met of current revenue, and, as is pointed out earlier herein, this revenue could only be obtained by increasing or endeavouring to increase the fares to be paid on the Ottawa Electric Railway. While the eight hour day does prevail in certain industries it is not by any means a work day that is generally in force.

It is possible that it will come to be more generally recognized, but I cannot feel that the time has yet arrived when the general public should be asked to take up the burden of paying for such a work day in an occupation similar to that engaged in by conductors and motormen of the City of Ottawa.

A considerable time was taken up by the Board in discussing the spread of hours during which an employee performs his duties. The representative of the company suggested that by altering certain runs this spread could be reduced and he advised the Board that he would work out a plan to bring this about. I am of the opinion that every effort should be made in this direction. If this spread could be substantially reduced, it seems to me that the only real dispute between the company and its employees will be settled. While certain runs must of necessity carry with them a longer spread than others the following information based on platform time will show that the company is endeavouring to adjust its schedule:

Number of runs.....	176
Average for 83 runs.....	8 hours 24 min.
Average for 4 runs .....	9 hours
Average for 89 runs.....	9 hours 30 min.

Taking the average work day as nine hours, the following result is shown by the above:

Overtime each day.....	44 hours 57 min.
Undertime each day.....	49 hours 48 min.

The runs which extend beyond the nine hours receive for such extra time payment at the rate of time and a half;

all runs on which, however, less than nine hours are worked receive full pay for the nine hours.

The majority report of the Board is in error in stating that the representative of the company admitted "that in the case of nine-hour work day it was practically impossible to arrange the spread differently although admitting the longer spread would not exist in the case of the eight-hour day." On the contrary the company's representative stated that he would endeavour to prepare a schedule which would show a much reduced spread, and no doubt this will be worked out. The eight-hour day in itself, it was pointed out, would not any more destroy the spread than would a six hour day or a four hour day were these to be established.

As the wages of conductors and motormen have always been the basis on which the wages of other employees have been adjusted, I do not deal with these in detail.

Having regard, therefore, to existing conditions in the city of Ottawa as they affect the company, its employees and the public, I am of the opinion that it would be fair to all parties if the hours and wage rates at present existing were to continue in force, provision being made, if at all possible, for the adjustment of the spread of hours to which I have referred. All of which is respectfully submitted.

(Sgd.) GEORGE D. KELLEY,  
Member of Board.

Ottawa, June 6, 1923.

**Report of Board in Dispute between the Shipping Federation of Canada and Canadian Pacific Steamships, Limited, and certain workmen being checkers and coopers.**

A report was received from the Board established as above stated, to deal with a dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain workmen, being checkers and coopers, members of Lodge No. 927 Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The report was unanimous and contained recommendations for the settlement of the dispute.

The text of the report is as follows:

**Report of Board**

Report of the Board of Conciliation named in virtue of the Industrial Disputes Investigation Act for the purpose of inquiring into differences between the Shipping Federation of Canada and the Canadian Pacific Steamships Limited, and certain workmen being checkers and coopers, members of lodge No. 927, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Montreal, June 1st, 1923.

The Honourable James Murdock, M.P.,  
Minister of Labour,  
Ottawa, Ont.

Sir,

The members of the Board appointed by you under date of May 22nd, 1923, to inquire into the above dispute, and composed of Messrs. E. McG. Quirk, Chairman, Bernard Rose, employers' representative named by the Minister, J.

G. O'Donoghue, K.C., employees' representative, have the honour to report.

The Board made every possible effort to get the parties to meet and effect an adjustment. Notwithstanding such efforts, and as a result of the contentions of the employers, they regretfully were compelled to make an award without the parties to the dispute reaching a settlement that was mutually satisfactory.

In brief, the position of the employers is that, owing to conditions now prevailing, and the low rates paid for freight and business being carried on at a loss during the past two seasons, they cannot afford to pay more than they are presently paying.

The Board finds itself in a quandary owing to one very important fact, and that is, during the course of their investigation, they ascertained that checkers employed on the wharves by the railroads are paid a rate even higher than that which the applicants for the Board demand from the shipping interests.

We are unanimously of the opinion, without going into the merits of the matter any further, that the employees are entitled to consideration in the matter of an increase.

The Board held sessions on May 28, 29, 30, 31 and June 1st.

The whole respectfully submitted.

(Sgd.) E. McG. QUIRK,  
J. G. O'DONOGHUE,  
BERNARD ROSE.

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1923.

THE following table shows the number of strikes and lockouts in existence in Canada at some time or other during May, 1923, reported to the Department, together with the number of employees involved and the time loss in working days, as compared with the previous month, and with May, 1922.

	Disputes	Number of employees involved	Time loss in working days
May, 1923.....	34	4,707	65,188
April, 1923.....	22	2,263	34,553
May, 1922.....	31	13,433	279,857

The record of the Department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together.

A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

The printing and publishing group and the buildings and structures group showed the greatest time loss during the month, 25,246 and 16,874 working days respectively. Seventeen new disputes were reported to the Department during May, twelve of which were terminated by the end of the month. Three of these were where employees on piece rates demanded and secured more favourable

working conditions affecting their earnings.

Information was received during May relating to two strikes beginning during April, namely those of coal miners at Blackstone and at Foothills, Alberta, not recorded in the April issue of the LABOUR GAZETTE. Both of these strikes commenced April 1, and both terminated May 17. Information was also received in the Department relating to disputes causing interruptions to industry during April and May, which were not strikes as above defined. On April 20, 264 coal miners at Inverness, N.S., ceased work for one day owing to objections to the appointment of a new mine manager, whom they refused to allow to take up the duties of his office. On May 18, some 38 asbestos miners at Thetford Mines ceased work when their demands for contract or pieces rates of wages instead of hourly rates were refused. The following day the men resumed work under the same conditions as existed prior to the cessation of work. At Hamilton several blanket weavers ceased work on May 18 for one half day in a textile establishment, claiming that their piece rate earnings were reduced by a reduction in the speed of the machinery, made by the management on account of excessive breakage. It was agreed to increase the piece wage rates by five per cent, and work was resumed. A dispute occurred at the Vetcraft Workshops at Toronto (operated by the Department of Soldiers' Civil Reestablishment to provide employment for certain classes of disabled ex-soldiers) in which the men left work on May 1, in protest against a reduction in the allowances paid. On May 15, they returned to work pending a final settlement. At Montreal on May 3, a cessation of work occurred for one day when 65 labourers went on strike, demanding an increase in wages from 30 cents per hour to 40

cents per hour. A compromise was effected at 35 cents and work was resumed. Labourers engaged on railway construction work at St. Thomas went on strike against a decrease in wages from 40 cents to 37 cents, a rate in force sometime previous. Most of the workers returned to work within a few hours while a small number sought work elsewhere. Messenger boys in the employ of a telegraph company at Edmonton ceased work on May 3, over the re-arrangement of delivery zones, but most of the boys returned to work the following morning while the places of the others were filled. Three electric light linemen at Saskatoon, employed by the municipality ceased work April 4, owing to a reduction in wages, but were replaced.

Seventeen disputes involving 1,227 workpeople were carried over from April. Four of the strikes commencing prior to May and twelve of those commencing during May terminated during the month. At the end of May, therefore, there were on record 18 disputes:—coal miners, Maccan, N.S.; brewery workers, Toronto; clothing workers, Montreal; rubber workers, Montreal; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors at Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; mill workers, St. Romuald, Que.; builders' labourers, Quebec; plasterers and cement finishers, Halifax, and motormen and conductors at Niagara Falls.

#### Disputes by Industries.

The following is a review of disputes by those groups of industries in which strikes and lockouts occurred during the month in the order in which they appear in the statistical table.

#### LOGGING

A strike of some 460 lumber workers employed by several companies throughout the Kootenay District in British Columbia, occurred on May 1. They demanded a change in the minimum rate of wages from \$3.25 per day to \$4 per day, as well as other changes in working conditions. After being on strike several days they resumed work May 22, under the same conditions as existed prior to the strike.

#### MINING, NON-FERROUS, SMELTING AND QUARRYING

Twenty coal miners of Blackstone, Alta., and seventy at Foothills, Alta., went on strike April 1 against a reduction in rates of wages, the employers refusing to renew the District 18 agreement. As a result of negotiations, settlements were reached on May 17, at the previous rates with the contract miners on the day rate of \$7.50 per day pending agreement to be drawn up later. At Glace Bay, N.S., 1,103 coal miners on contract rates went on strike May 2, on the ground that the company refused to install a new type of machinery, or pay them higher wages for running the machines then in use. Negotiations were carried on with the result that the company agreed to install the new machinery as soon as procurable and in the meantime to increase the rate of pay per ton. Work was resumed May 7. At Inverness, N.S., when the operator of a coal mine changed to day rates instead of contract rates, for certain work 196 miners ceased work on May 17. The question in dispute was referred to arbitration and workers resumed May 22. The investigators reported that under the agreement contract rates should be paid, but recommended certain changes in operations on the part of the employees. On May 23, some 36 coal miners at Maccan, N.S., went on strike for increased wages. This strike remained unsettled at the end of the month.

## MANUFACTURING

*Vegetable foods, drink and tobacco.*—

The strike of brewery workers at Toronto which commenced April 16, remained unsettled at the end of May. A strike of 135 workers in a cereal factory occurred on May 16, at Goderich, the men demanding an increase of five cents per hour. The company offered an increase of three cents per hour, which the men accepted and work was resumed May 21.

*Textiles.*—Twelve loom-fixers at Montreal went on strike May 15 against the dismissal of one employee and the division of his work between two others. The employees also objected to women and girls being allowed to work at the noon hour. As the plant was closed down three hundred and three employees were indirectly affected. The company agreed to make a better distribution of work and operations were resumed May 23.

*Clothing.*—On May 11, a strike of 38 clothing workers occurred at Montreal for recognition of the union. This strike remained unsettled at the end of May. The strike of rubber workers at Montreal carried over from the April record was still in existence at the end of the month.

*Leather, fur and products.*—The strike of shoeworkers at St. Hyacinthe which occurred April 17, against the dismissal of employees was terminated May 3, when the men resumed work on the employer's terms.

*Printing and publishing.*—The ten strikes in the printing and publishing group carried over from 1921 and 1922, remained in existence at the end of the month. During May, 971 employees were involved resulting in a time loss of 25,246 working days.

*Saw and planing mills.*—On May 23, a strike of 380 mill hands occurred at St. Romuald, Que. The men demanded an increase in wages from \$2 to \$2.50

per day of 10 hours. This strike remained unsettled at the end of May.

*Iron, steel and products.*—On May 16, some 52 brass finishers at London went on strike for improved working conditions. The men had been working on hard metal which broke their tools easily and so much time was lost on the repair of them, that they asked for either softer metal or an increase in wages to make up their losses. After negotiations had been carried on an arrangement was made whereby an increase of ten per cent on all piece work rates was granted to be paid until the supply of hard metal was exhausted and softer metal was secured. Work was resumed May 21. About 120 lathers in the employ of several firms went on strike at Toronto on May 14 for an increase in wages from 87½ cents per hour and \$1 per hour to \$1.25 per hour. Negotiations were carried on with the result that work was resumed May 18 at \$1.12½ per hour. Twenty moulders in the employ of a locomotive manufacturing company at Kingston went on strike May 16 for an increase in wages from 60 cents per hour to 75 cents per hour. After negotiations work was resumed May 31 under an agreement that 70 cents would be the rate in effect from June 1, and 75 cents per hour after September 1. Thirty-six moulders' helpers went on strike at Sydney May 9, against the employment of a particular person. The men resumed work May 11, without attaining their object.

## CONSTRUCTION

*Buildings and structures.*—A strike of builders' labourers occurred at Quebec on May 1 for increased wages from 30 and 40 cents per hour to 45 cents and 50 cents per hour, some 550 members involved. This strike remained unsettled at the end of May. Some of the strikers returned to work at 40 and 45 cents per hour. On May 1, some 170 bricklayers and masons at Quebec went

## STRIKES AND LOCKOUTS DURING MAY, 1923.

Industry, occupation and locality	Number of employees involved	Time lost in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to May, 1923.</b>			
<b>MINING, NON-FERROUS, SMELTING AND QUARRYING—</b>			
Coal miners, Blackstone, Alta.	20	280	Commenced April 1, against reduction in wages on contract work. On May 17, men resumed work pending a final agreement.
Coal miners, Foothills, Alta.	70	980	Commenced April 1, for renewal of 1923 agreement. On May 17, agreement was made to resume work at previous rates pending a final settlement.
<b>MANUFACTURING—</b>			
<i>Vegetable foods, drink and tobacco:</i>			
Brewery workers, Toronto, Ont.	52	1,352	Commenced April 16, against introduction of open shop conditions. Unterminated.
<i>Clothing:</i>			
Rubber workers, Montreal, Que.	53	1,378	Commenced April 24 for recognition of the union. Unterminated.
<i>Leather, fur and products:</i>			
Shoeworkers, St. Hyacinthe, Que.	29	58	Commenced April 17, against dismissal of employees. Work was resumed May 3, employees returning on employers terms.
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que.	30	780	Commenced May 2, 1921 for shorter hours. Unterminated.
Printing compositors, Hamilton, Ont.	13	338	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Unterminated.
Printing compositors, Montreal, Que.	21	546	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Unterminated.
Printing compositors, Montreal, Que.	205	5,330	Commenced July 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Montreal, Que.	25	650	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Unterminated.
Printing compositors, Toronto, Ont.	384	9,984	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Winnipeg, Man.	157	4,082	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Unterminated.
Printing compositors and pressmen, Halifax, N. S.	38	988	Commenced May 2, 1921 for shorter hours with same weekly wages. Unterminated.
Printing compositors and pressmen, Ottawa, Ont.	87	2,262	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors and pressmen, Vancouver, B. C.	11	286	Commenced May 2, 1921, for increased wages and 44-hour week. Unterminated.
<b>CONSTRUCTION—</b>			
<i>Miscellaneous construction:</i>			
Steam shovel men, New Welland Ship Canal.	23	552	Commenced April 16, for monthly rates of wages and increased rates. Settled by negotiations and mediation May 29. Men secured semi-monthly rates and increased wages.
<b>TRANSPORTATION—</b>			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	9	234	Commenced July 2, 1922, for recognition of the union. Unterminated.

## STRIKES AND LOCKOUTS DURING MAY, 1923.—(Continued.)

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(b) Strikes and lockouts commencing during May, 1923.</b>			
<b>LOGGING—</b>			
Lumber workers, Kootenay District, B. C.	460	8,280	Commenced May 1, for increased wages and other changes. Men returned to work May 22, under same conditions as existed prior to the strike.
<b>MINING, NON-FERROUS, SMELTING AND QUARRYING—</b>			
Coal miners (puncher men), Glace Bay, N. S.	1,103	2,596	Commenced May 2, for the installation of new machinery. Work resumed May 7, wages rates to be increased pending installation of new machinery.
Coal miners, Inverness, N. S.	196	784	Commenced May 17, against change from contract rates to datal rates. Settled by arbitration May 22, contract rates to be restored.
Coal miners, Maccan, N. S.	34	272	Commenced May 23, for increased wages. Unterminated.
<b>MANUFACTURING—</b>			
<i>Vegetable foods, drink and tobacco:</i>			
Cereal workers, Goderich, Ont.	135	540	Commenced May 16, for increased wages. Settled by negotiations May 21, an increase of 3 cents per hour being granted.
<i>Textiles:</i>			
Textile workers, Montreal, Que.	12	78	Commenced May 15, against the discharge of employees. Settled by negotiations May 23, the company agreeing to a better distribution of work.
<i>Clothing:</i>			
Clothing workers, Montreal, Que.	38	684	Commenced May 11, for recognition of the union. Unterminated.
<i>Saw and planing mills:</i>			
Mill workers, St. Romuald, Que.	380	3,040	Commenced May 23, for increased wages. Unterminated.
<i>Iron, Steel and Products:</i>			
Brass finishers, London, Ont.	52	208	Commenced May 16, for improved working conditions or higher wages. Settled by negotiations May 21, the men securing their demands.
Lathers, Toronto, Ont.	120	480	Commenced May 14, for increased wages. Settled by negotiations May 18, a partial increase being granted.
Moulders, Kingston, Ont.	20	280	Commenced May 16, for increased wages. Settled by negotiations May 31, an increase being granted.
Moulders' helpers, Sydney, N. S.	36	72	Commenced May 9, against employment of particular persons. Settled by negotiations May 11. Men returned to work without attaining their object.
<b>CONSTRUCTION—</b>			
<i>Buildings and structures:</i>			
Bricklayers and masons, Quebec, Que.	170	2,210	Commenced May 1, in sympathy with the builders' labourers who were also on strike. Strike called off May 17.
Builders' labourers, Quebec, Que.	550	14,300	Commenced May 1, for increased wages. Unterminated.
Plasterers and cement finishers, Halifax, N. S.	14	364	Commenced May 1, for increased wages. Unterminated.
<i>Railway construction:</i>			
Pile drivers, Vancouver, B. C.	60	720	Commenced May 1, for increased wages. Settled by negotiations May 15, the demands of the men being granted.
<b>TRANSPORTATION—</b>			
<i>Water transportation:</i>			
Coal trimmers, Montreal, Que.	100	200	Commenced May 27, for increased wages. Settled by negotiations May 29, a partial increase being granted.

on strike in sympathy with builders' labourers on strike in Quebec. After being out a few days they demanded an increase in wages. This was refused and about May 17 the employees agreed to return to work. On May 1, 14 plasterers and cement finishers at Halifax went on strike for increased wages from 75 cents to \$1 per hour. This strike remained unsettled at the end of the month.

*Railway construction.*—A strike of 60 pile drivers for increased wages from \$6 to \$7 per day, occurred on May 1, at Vancouver. The employers offered an increase of 50 cents per day but this was not accepted by the men. After further negotiations the demands of the men were granted and work was resumed May 15.

*Miscellaneous construction.* — The strike of 23 steam shovel operators,

which began on April 16 on the New Welland Ship Canal, was terminated May 29. The men demanded monthly wages and increased rates. They were granted semi-monthly rates and a bonus sufficient to bring the wages up to the amounts demanded.

#### TRANSPORTATION

*Street and electric railways.* — The strike of motormen and conductors at Niagara Falls carried over from the previous month's record remained unsettled at the end of May.

*Water transportation.* — On May 27, about 100 coal trimmers at Montreal went on strike for an increase in wages from 50 cents per hour to 90 cents per hour. After negotiations had been carried on work was resumed May 29 at 70 cents per hour for day work and 80 cents per hour for night work.

### STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING APRIL, 1923.

**T**HE British *Ministry of Labour Gazette* for May contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during April, 1923, based upon returns from employers and workpeople.

#### NUMBER, MAGNITUDE AND DURATION.

—The number of trade disputes involving a stoppage of work reported to the Department as beginning in April in Great Britain and Northern Ireland was 52, as compared with 52 in the previous month and 38 in April 1922. In these new disputes 56,000 workpeople were directly involved and 4,000 indirectly involved (i. e. thrown out of work at the establishments where the disputes occurred though not themselves parties

to the disputes). In addition 50,000 workpeople were involved, either directly or indirectly, in 38 disputes which began before April, and were still in progress at the beginning of that month. The number of new and old disputes was thus 90, involving 110,000 workpeople, and resulting in a loss during April of 1,077,000 working days.

**CAUSES.**—Of the 52 disputes beginning in April, 19, directly involving 3,000 workpeople, arose out of proposed reductions in wages; 16, directly involving 12,000 workpeople, on other wages questions; 6, directly involving 39,000 workpeople, on questions of unionism and non-unionism; and 11, directly involving 2,000 workpeople, on other questions.

RESULTS.—Settlements were effected during April in the case of 22 new disputes, directly involving 41,000 workpeople, and 17 old disputes, directly involving 13,000 workpeople. Of these new and old disputes, 12, directly involving 7,000 workpeople, were settled in favour of the workpeople; 10, directly involving 2,000 workpeople, in favour of the employers; and 17, directly involving 45,000 workpeople, were compromised. In the case of 7 disputes, directly involving 40,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in April in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of Industries	Number of disputes in progress in April			Number of workpeople involved in all disputes in progress in April	Aggregate duration in working days of all disputes in progress in April
	Started before April, 1	Started in April	Total		
Building .....	5	3	8	5,000	73,000
Mining and quar- ring .....	5	5	10	47,000	222,000
Metal, engineering and shipbuilding	9	7	16	12,000	27,000
Textile .....	3	....	3	31,000	493,000
Agriculture and fishing .....	3	1	4	8,000	179,000
Printing, paper, etc. trades.....	4	4	8	1,000	26,000
Food, etc., trades	2	6	8	2,000	13,000
Other trades.....	5	20	25	2,600	21,000
Employees of pub- lic authorities.	2	6	8	2,600	23,000
Total, April, 1923	38	52	90	110,000	1,077,000
Total, Mar., 1923..	27	52	79	83,000	762,000
Total, April, 1922	58	38	98	*247,000	*5,261,000

\*Disputes involving over 200,000 workpeople in the engineering and shipbuilding industries were in progress in April, 1922.

## CONVENTION OF AMALGAMATED ASSOCIATION OF IRON STEEL AND TIN WORKERS OF NORTH AMERICA.

THE forty-eighth annual convention of the Amalgamated Association of Iron, Steel and Tin Workers of North America was held at Warren, Ohio, on April 3 to 18, under the presidency of Mr. M. F. Tighe.

Provision was made for joint committees to prepare wage scales where two or more lodges are working for the same company under a local scale agreement. The convention favoured the adoption of the memorandum of agreement with respect to the scale of 1922-23 but recommended certain changes with respect to various scales and in other cases left them for local adjustment.

With regard to strikes and lockouts, it was resolved that before a lodge or lodges

can be called out on strike the proper official must first ascertain by secret ballot the attitude of the members on the situation. It was also decided that the entire membership should be assessed one per cent of their earnings to provide a strike and lockout fund, from which each member in good standing on strike or lockout would be paid weekly amounts of \$5 if there was not less than \$10,000 in the fund, \$10 if there was not less than \$200,000, \$15 if there was not less than \$400,000, and \$20 if there was not less than \$1,000,000.

Among other resolutions adopted was one in which it was decided to launch a woman's auxiliary in which any mother, wife, daughter or sister of a

member shall be eligible for membership. The convention decided to refer to the American Federation of Labour a resolution calling upon all labour organizations to come together and establish a labour college. It also decided to introduce a resolution at the next convention of the Federation calling upon

the organized labour movement of the United States to unite their political strength into one independent political party. A resolution was also adopted in favour of holding all future conventions of the Association at Pittsburgh, Pennsylvania, so long as that place remains its headquarters.

### CONVENTION OF UNITED CLOTH HAT AND CAP MAKERS OF NORTH AMERICA.

THE fourteenth (eighth biennial) convention of The United Cloth Hat and Cap Makers of North America was held at New York, N.Y., from May 1 to 9, with 51 delegates representing 26 locals present. It was stated at the convention that one of the most pressing problems which the organization had to face was trade deterioration caused by jobbers who in many cases were really manufacturers but who gave out their cut goods for manufacture to so-called social or attic shops, instead of keeping plants of their own. To check this deterioration a plan for an extensive organization campaign was adopted under which the field would be divided into four districts with a social organizer for each district.

A resolution was presented from the United Hatters of North America expressing its desire of relinquishing its claim of jurisdiction over the millinery trade to the United Cloth Hat and Cap Makers of North America and requesting that they be given control over the men's hat industry. The convention expressed its appreciation of this resolution and authorized the incoming executive to enter into conferences with the United Hatters of North America and the American Federation of Labour to bring about a complete settlement of the question. The convention endorsed the efforts of the General Executive Board to bring about the permanent and organized co-operation of the needle trades, and requested the continuance of the work. It favoured the introduc-

tion of a minimum wage for all the branches of the trade, at the earliest possible time, and instructed the incoming executive to take all the necessary measures to make the decision effective. The executive was also instructed to work out a detailed plan for the establishment of an unemployment fund and to submit the plan within six months to a referendum vote of the membership for approval. The convention expressed itself in favour of urging the United States Government to recognize the Soviet Government of Russia and make provisions for the re-establishment of trade relations with it. The release of all political prisoners was demanded. It was also decided that a committee should be appointed to prepare a plan of educational activities for the organization. Another resolution was in favour of more active propaganda for the union label. It was also decided to participate in the Federated Bank which is organized by the Central Trades and Labour Council of the City of New York.

The following officers were elected: President, M. Zaritsky, and general secretary M. Zuckerman (re-elected). The Executive Board included: M. Berger, Toronto.

On May 10, following the convention, the first meeting of the executive board was held. A delegate from Toronto and a delegate from Montreal expressed their opinion that the Headgear Workers' Central Bureau of Canada could be re-

vived and made very helpful in the coming organization campaign. Mr. P. Ginsburg was appointed to meet the Executive Board and the locals at Toronto and report back on the Canadian situation. Five shares for \$1,000 in the Federated Bank were bought by the

organization. The executive approved a promise made by the president and secretary that when the bank which is being organized by the International Ladies' Garment Workers is complete they will subscribe for \$5,000 worth of stock.

---

### CONVENTION OF BROTHERHOOD OF DOMINION EXPRESS EMPLOYEES

**T**HE fourth convention of the Brotherhood of Dominion Express employees was held at Toronto on April 6 to 19 under the presidency of Mr. Allan Paton, with about 30 delegates and nine Grand Lodge officers present.

The convention decided that there should be provided and maintained a schedule committee consisting of representatives, one each from the following provinces: British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and Quebec, and one representative from the three provinces New Brunswick, Nova Scotia and Prince Edward Island. The Grand President was empowered to select the members of this committee subject to the approval of the locals concerned. Several resolutions with regard to seniority rights, hours, wages, etc. were referred to this committee for consideration. A resolution was adopted requesting that the incoming executive draft a plan of group insurance to be submitted to the next convention, and it was also de-

cided that they should take up with the higher officers of the Company the matter of annual passes and the free transportation over foreign lines especially with regard to obtaining for the employees of the Dominion Express Company the same privileges as are now enjoyed by employees of the Canadian Pacific Railway Company. A report of the ways and means Committee was adopted which estimated receipts for the coming year at \$31,177 (including cash in bank on March 31, 1923, \$18,996) and expenditures \$27,124. A committee was appointed to secure legal advice with regard to the purchasing of bonds to the amount of \$10,000, such amount to be invested from Grand Lodge funds. The election of officers resulted in the re-election of Mr. Allan Paton as Grand President and Mr. C. J. Driscoll as Grand Secretary-Treasurer. A governing head was also appointed for the Women's Auxiliary and locals where auxiliaries exist were asked to finance them in so far as organizing expenses were concerned.

## CONVENTION OF THE ONTARIO LABOUR EDUCATIONAL ASSOCIATION

### Women's Educational Federation of Ontario

THE twenty-first annual convention of the Ontario Labour Educational Association was held at Hamilton, Ont. on May 24. There were present about 120 delegates representing 70 international trade union locals, including eleven central labour unions. President Tom Moore and secretary-treasurer P. M. Draper of the Trades and Labour Congress of Canada were also present. The auditors' report showed the Association to be numerically and financially flourishing. A resolution in favour of starting a provincial labour paper was adopted. The delegates voted to assess themselves one dollar, being one year's subscription to the proposed publication and decided that the paper would be published when 2,000 paid-up subscriptions were forthcoming. A resolution was also adopted requesting the abolition of the Colonization Branch of the provincial Department of Agriculture and also the abolition of all private employment agencies, and requesting that all employment activities in the province be carried on through the Employment Service. It was claimed that about 50 immigrants from the Hebrides who had been brought to Canada through the activities of the Colonization Branch, to take up farming, had failed to secure employment on Ontario farms and had been placed in industrial employment at Toronto by the Employment Service Bureau. It was also stated that some of the new immigrants had undertaken positions as strikebreakers in a Toronto brewery. The convention also decided to submit a questionnaire to candidates at the coming provincial election to ascertain their stand on various matters, including the eight-hour day. A resolution in favour of political action was defeated. It was also decided to hold the next conven-

tion at St. Catharines and that May 24 should in future be the convention date.

The following officers were elected: president, James F. Marsh, Toronto, (re-elected); vice-president, James A. Sullivan, Local 55, International Cigar-maker's Union; and secretary-treasurer, Joseph T. Marks, Toronto, (re-elected).

### Women's Educational Federation

The Women's Educational Federation of Ontario was also in session at the same time. The women's convention strongly opposed the closing of the Brant Military Hospital. The question of affiliation with the Ontario section of the Canadian Labour Party was placed on the table. It was reported that a Kingston firm was employing young boys in an effort to defeat the Ontario Minimum Wage and a resolution was adopted requesting the provincial government to include boys within the scope of the Act. A resolution was also adopted calling upon the Provincial Department of Education to include proportional representation as a branch of simple mathematics in the curriculum of Ontario schools.

The convention decided to be represented at the annual provincial educational conference of Ontario. It also decided, in view of its rapid development during the past year, to meet quarterly.

The next meeting of the Federation will be held at Bartonville, on August 18.

The following officers were elected: president, Mrs. W. F. Singer, Toronto; financial corresponding secretary, Mrs. H. G. Fester, Hamilton; treasurer, Mrs. Jean Ingles, Bartonville.

## RECENT LABOUR LEGISLATION IN CANADA.

### Measures enacted in Nova Scotia New Brunswick, and Alberta in 1923.

THE following article contains an outline of acts having special relation to labour which were enacted at the recent sessions of the legislatures of Nova Scotia, New Brunswick and Alberta.

#### Nova Scotia

The third session of the thirty-seventh General Assembly of the Province of Nova Scotia began on February 22 and concluded on April 25, 1923. In his opening Speech from the Throne the Lieutenant-Governor stated that "the Workmen's Compensation Act during the six years that it has been in force has proved of great benefit to those engaged in the industrial life of the Province. During the past year over one half million dollars was paid to injured workmen and to the widows, children and dependents of deceased workmen. An Accident Prevention Association has been formed, the efforts of which, it is believed, will have a very material effect on reducing the number of preventable accidents." Among other references to existing conditions the Lieutenant-Governor mentioned the growth of technical education in the Province. "The technical college", he said, "has the largest registration of engineering students in its history. Short courses have been reorganized and are providing technical training to more of our workers who could not afford complete college training. Evening technical classes have been organized and have a growing enrolment. The newly established correspondence study courses are rapidly reaching out to the remotest parts of the Province. All the technical college extension work bears evidence of continuous healthy growth, and is achieving noteworthy results in making many of our men and women more competent in their chosen vocations".

During the past session legislation was passed prohibiting without condition the employment in mines of boys under 16, and giving school districts the option of raising the age of compulsory attendance at school from 14 to 16 years.

Several amendments were made in the Education Act of 1918, among these being one to authorize the establishment in school sections of free public libraries "for the continued education of those who have completed their attendance at school as well as for those attending school," such a library to be considered part of the school system in the section.

In regard to the employment certificates which are required, under the same act, for children under 13 who are obliged through necessity to go to work, an amendment permits the issue of certificates, not only by the Board, as formerly, but also through the school principal, secretary, or some other authorized person. It is further provided that certificates shall be good only for employment with the person or firm mentioned and for the work specified therein, and that they shall be issued only on condition that the children obtaining them attend the evening technical or other classes approved by the Board, or conducted under the regulations of the Council of Public Instruction, while such classes are in session. On the violation of any of these conditions the certificate may be cancelled by the Board or the official who issued it. School sections were given authority, by a majority vote at the annual meeting, to make the provisions of the act, including compulsory attendance at school, applicable to children from 6 to 16 years, instead of from 7 to 14 years. The Technical Educa-

tion act of 1907 was amended by defining The Nova Scotia College as a corporation constituted by "the members of the teaching staff of the institution having the rank of professors, and such representative of any university of the Province or elsewhere as the Council may select, and a member of the N. S. Technical College Alumni Association who shall be appointed by the Council."

Important amendments were made in the Coal Mines Regulation Act. The age limit for the employment of boys in mines was raised from 12 to 16 years. Boys under 16 could formerly be employed on securing school certificates, their working hours being limited to 10 in the day and 54 in the week. The rule providing that travelling roadways in mines shall be of reasonable height was enlarged to make provision that in the event of a dispute between the owners and the inspector as to the capacity of the roadway the matter shall be settled by arbitration. Roadways must also be wide enough to permit draft animals to pass without rubbing the roof or sides. Where mechanical hoisting or lowering appliances are used in a mine the brake straps or drums must be lined with asbestos or other non-inflammable material. The two latter amendments were suggested by a delegation of miners which waited on the Provincial Government in March (LABOUR GAZETTE, April, 1923, page 353). Mine managers were declared to be competent to act as mine examiners, and a previous clause absolutely forbidding the use of electric lamps for the purpose of examination for the detection of noxious gas was repealed; all such lamps, however, must still be of a type approved by the Commission of Public Works and Mines.

The Workmen's Compensation Act of 1915 was amended to provide that the salaries of the members of the Workmen's Compensation Board shall be payable out of the Accident Fund, in-

stead of Provincial revenue, as formerly. A special act was passed instructing the Workmen's Compensation Board to pay compensation to the dependants of a certain workman who lost his life while descending an unused mining shaft for the purpose of rescuing his son, to the same extent as if the accident had arisen "out of and in the course of employment."

A compulsory and contributory system of retiring allowances was established for persons employed in the public service of the Province who are not otherwise provided for in that respect. Superannuation benefits under this act are for employees who have had ten years' continuous service and have reached the age of sixty-five years and been retired, retirement being required at that age except in the case of an employee whose continued service is desired in the public interest. Monthly deductions are made from salaries of amounts fixed by the Lieutenant-Governor in Council, and these amounts are paid into a superannuation fund. The amount of benefit payable to the employee is calculated upon average yearly salary for the last three years of employment, and is according to the following scale; for 10 but less than 11 years of service, ten-fiftieths of such average salary; for eleven years of service, eleven-fiftieths, and a further addition of one-fiftieth for each additional year of service up to 35 years, but no annual allowance is to exceed \$3,000. If at any time the superannuation fund is not sufficient to meet all due payments the Provincial Treasurer is authorized to pay into the fund, out of the Consolidated Revenue Fund, an amount sufficient to permit such payments to be made. Provision is made for the payment of half benefits to dependents in the event of the death of an employee who would be entitled to allowance, and for the return of contributions, with 5 per cent interest where an employee dies or leaves the service before completing ten years of employment.

A "public utility" under the Public Utilities Act was declared to be entitled to earn eight per cent of the fair value of its property, in addition to operating expenses, taxes, and all just allowances made according to the regulations of the Public Utilities Board.

The Public Highways Act of 1917 was amended in the section defining the powers of an overseer to requisition local labour for work on highway when snow-bound. The original act declared all residents subject to poll-tax to be liable to this duty; the amendment limits this liability to male persons physically fit between the ages of 16 and 60, and exempts youths in regular attendance at public school during school hours and provides penalties for those who fail to work when called on by the overseer.

#### New Brunswick

At the third session of the eighth Legislative Assembly of New Brunswick, which opened on March 8 and concluded on April 13, 1923, several measures were passed in the interest of labour. The opening speech from the Throne alluded to the depression in the lumber industry during the past year, causing a loss in provincial revenue, and to the heavy losses sustained by the farm workers during the past two years. Reference was made, as in Nova Scotia, to the progress of education in the province. Vocational education had made steady progress, it was stated, and many communities were taking advantage of the assistance offered by the province, especial interest being shown in the establishment of day schools for industrial training. The aim of the Government, the speech declared, is "to aid in promoting a training in vocations that will place this province on a competitive basis with other provinces and states." To this end educational surveys had been made in many of the larger cities and towns, and reports laid before the citizens for their consideration. A marked

increase in the number of teachers now available in the province was attributed in part to the present policy of government loans to student teachers (LABOUR GAZETTE, April, 1923, page 352). The Speech also stated that the health of the Province had benefited by the recent activities of the Department of Health in conducting a service of all-time medical school inspection, and in work carried on through clinics and lecture courses by specialists in social hygiene.

During the session the Vocational Education Act of 1918 was revised and consolidated, control of vocational education being brought more directly than formerly under the provincial Board of Education, and the extent to which the province reimburses local committees being increased as regards the country vocational schools from 66 2/3 per cent in respect to salaries paid, to 75 per cent. School boards were authorized to extend free school privileges in the kindergarten department to children between the ages of four and six years. The teachers so employed have no claim upon the provincial school fund, but are to be wholly paid by the Board of School Trustees in the district where they are employed; such teachers are not at present required to hold teachers' licenses.

The Early Closing Act of 1917, which authorized municipal councils in cities and towns to order the closing at 6 p.m. of stores in a particular line of business, upon receipt of a petition signed by two-thirds of the persons engaged in that line, was amended, the required proportion of signatures being raised from two-thirds to three-fourths of the persons engaged, and action by the Council following the receipt of such a petition being made compulsory instead of optional. The same section was further extended to include unincorporated villages within these provisions, in addition to city and town municipalities.

The City of St. John was authorized to establish a fund for the payment to permanent employees of superannuation or retiring allowances, or of a gratuity to the dependents of employees dying while in the service of the city.

Pensions payable by the Dominion to members of the Canadian naval, military and air forces were by a special act exempted from assessment or taxation for any and all purposes.

A Farmers' Relief Act was enacted for the purpose of relieving farmers from financial embarrassments and to encourage agricultural developments by providing for loans upon farm mortgages at reduced rates of interest.

The amount of the Province's guarantee for the bonds of the Farmers' Co-operative Creamery Company, Limited, was increased from \$15,000 to \$50,000.

The legislature also passed an act to make uniform the law respecting Warehousemen's Liens this being similar to acts which have been enacted in various other Provinces of Canada.

#### Alberta

The third session of the fifth legislature of Alberta, which began on January 23 and ended on April 21 of the present year, produced several measures affecting labour. Among these may be mentioned an act to amend the Mothers' Allowances Act, for although it does not fall strictly within this class its subject is often included in the general group of labour legislation. The amendment makes the act more widely applicable throughout the Province. The act of 1919 established local machinery for administering the act in

cities or towns only, the remainder of the Province being dealt with directly by the Provincial Superintendent. Under a new amendment all municipalities, and not only those of cities and towns, are required to appoint inspectors to receive and report upon applications, and otherwise carry out the purposes of the act in the district concerned. If inspectors have not been appointed, the clerk, secretary or secretary-treasurer of the district is to be considered as an inspector. In improvement districts applications are to be made directly to the Provincial Superintendent of Neglected and Dependent Children. This official, when he makes a recommendation otherwise than as a result of the report of a local inspector, is required to report full particulars of the case to the municipality affected, or in the case of a resident of an improvement district, to the Deputy Minister of Municipal Affairs. Monthly, instead of quarterly reports, upon each case must be forwarded by the Attorney-General's Department (which is at present in charge of the administration of the act) to the local authorities. Amounts charged against improvement districts will be reimbursed to the Provincial Treasurer out of the district funds. Another amendment to the same act provides that the wife of an inmate of a hospital under the provisions of the Mental Diseases Act is eligible for an allowance (The act originally required that the husband in such cases should have been committed to a hospital for the insane under The Insanity Act).

The responsibilities of employers in regard to the local taxes of their workers were redefined in an amended sec-

tion of the Town Act as follows: the employer must, on the request of the secretary-treasurer of the municipality, furnish a monthly list of employees, and this official may require the employer to deduct from the next payment of wages the amount due for taxes from a stated employee (unless the latter has paid at least \$4 for school taxes for the year), and to remit this amount to him. An employer who fails to comply with this requirement is liable to a fine, and after non-compliance for two weeks to seizure of the amount due by distress and sale of his goods. The duties of employers under the School Assessment Act were similarly restated.

Instructors in manual training and other special courses were by an amendment to the School Grants Act, declared to be entitled to the wage scale of regular grade teachers.

Two measures were enacted affecting the coal mining industry. Under one of these acts mine owners in the Province were made subject, as from May 31, 1918, to a tax of two per cent upon their gross revenue from the mine. By the other act, which will remain in force for one year, coal shipped or sold in the Province must be graded, the grades to be fixed by order-in-council after investigation by advisory grading committees; operators are further required to register a name for the coal they take out in accordance with the official classification.

Two measures passed during the session had reference to Provincial civil servants. By an amendment to the Superannuation Act of 1922 (LABOUR

GAZETTE, March, 1923, page 269) a further annuity was provided for retiring employees who had not made the contribution now required under the provisions of the act, with the limit that the total amount of annuities received by the retiring employee must not exceed one-third of the amount of the salary he received prior to his retirement. The Civil Service Garnishment Act was amended so as to provide that no debt due to any employee from the Crown shall be liable to attachment, unless such debt exceeds \$75 (in the original act this figure was \$25), and then only to the extent of the excess; but this provision does not apply in cases where the debt owed by the employee is for board and lodging.

An amendment to the Direct Legislation Act of 1913 gives the legislature new powers in connection with the submission to popular vote of suggested legislation which has been petitioned for under the provisions of the Act. Formerly the draft bill prepared by the petitioners had to be submitted to a vote of the electors as it stood, but under the amendment the legislature, if it already favours the submission of a similar question, may submit to popular vote the principle or subject matter of the proposed act, the ballot providing for the expression by the voters of as many choices as there are questions to be submitted, and the votes being dealt with in accordance with the principle of the single transferable preferential vote. The measure asked for by the petitioners will then be deemed to have popular approval if the final count shows that its underlying principle has received a majority of the votes-cast.

## FACTORY LEGISLATION IN CANADA.

### A Comparison of the Factory Acts of the Various Provinces.

THE factory laws form one of the most important groups in the body of legislation affecting labour. Most of the existing rules governing industrial employment, particularly the regulations relating to the health and safety of the workers, the age of admission of children to industry, and the working hours of women and children, have been issued under the authority of the various provincial factory acts. An outline of the principal provisions of these acts was given in the *LABOUR GAZETTE* for October, 1920, forming one of a series of articles suggested by the Report of the Dominion-Provincial Commission on Uniformity of Labour Laws which was issued earlier in the same year. The reader is referred to that article for a full comparison of the provincial acts as then existing. The special recommendations of the Commission were that the various acts be made uniform in regard to the classes of industrial establishments covered; that smaller factories at present exempt in some provinces be made subject to inspection throughout Canada; that all provinces agree on the same age limit for the employment of boys and girls in industry, namely 14 years for boys, and 15 for girls; that the hours of employment for women and for children be generally brought into line with the draft conventions of the Washington conference of the International Labour Organization; and that safety and health provisions be more widely extended in their application.

The present article summarizes the provisions of the several acts in regard to those points on which greater uniformity as between the provinces was desired by the Commission.

#### Scope of Provincial Acts

The provincial acts vary considerably in their scope. The Factories, Shop and Office Building Act of Ontario and the Factories Act of Alberta are perhaps the most comprehensive in their operation. The former act, as its title implies, covers not only factories, but also buildings used for office purposes under control of a separate employer, and places "where goods are handled or exposed or offered for sale", as well as places where manufactures are carried on but which do not come under the definition of "factory" as used in the Act. The Alberta Act covers all factories in the province and in addition applies to shops, offices and office buildings in cities and towns having a population exceeding 5000, with the exception of chemists' shops, but including restaurants.

The term "factory" is employed in a practically identical sense in the acts of all the provinces, but in some there are limitations and restrictions which involve marked differences in practice. Factories are generally defined as premises in which mechanical power of some kind is used for the purpose of manufacture. The acts of Ontario and the four western provinces also cover buildings to which the employer has the right of access and in which manual labour is carried on in connection with the manufacture of articles for sale, the purpose of the clause "to which the employer has the right of access" apparently being to exclude domestic workshops from the definition. Domestic work is excluded also in the Nova Scotia Act, and the Industrial Establishments Act of Quebec exempts domestic workshops, unless the work done in them is classed by order-in-council as dangerous, and unless, fur-

ther, it is performed by means of mechanical power.

Lists of industries to which the acts severally apply are given as schedules to the acts of Alberta, British Columbia, Saskatchewan, Manitoba and Ontario, the Lieutenant Governor in Council having authority to add new industries lists. The acts of Quebec, New Brunswick and Nova Scotia are less precise, furnishing no such lists of industries, but in Quebec and Nova Scotia industries which are not already covered by the definition of factory may be included by order-in-council.

The provincial acts, however, while they employ similar definitions of the term "factories", differ in their application owing to certain individual features. These are briefly noted in the paragraphs which follow.

The Nova Scotia act is restricted primarily to factories employing mechanical power, though by order in council the act may be declared to apply more generally.

The New Brunswick act applies, without limit as to the number of employees, to all factories employing mechanical power, and to all laundries where employees work for wages, but other types of "factory" are not covered unless they employ at least ten workers. Fish and fruit canning establishments are exempt.

The Quebec act exempts domestic workshops, with the exceptions already mentioned, and, in addition, the Lieutenant Governor in Council may also exempt other premises by regulation.

The Ontario act is applicable only to factories in which more than five persons are employed and where power other than manual labour is used in aid of the manufacturing process carried on therein.

Factories employing less than three persons are exempted from the opera-

tion of the acts of Manitoba, Saskatchewan and British Columbia.

### Employment of Children

The Commission on Uniformity of Labour Laws, in the report already mentioned, recommended that "no boy under 14 years of age and no girl under 15 years of age shall be employed in an industrial establishment." It will be seen from the accompanying table that the age limits recommended by the Commission are the rule in most of the provinces of Canada. Saskatchewan was the latest province to fall into line by enacting an amendment last year in accordance with the recommendation.

The New Brunswick act forms an exception among the Factories acts in prescribing no definite age limit for the employment of boys and girls in industry, but the School Attendance Act provides that no child under the age of 13 years shall be employed in any mechanical, manufacturing or mercantile establishment; and in cities and towns where Part II of the same act is enforced by annual resolution no child under 16 may be employed during school hours except by permit. Moreover, the provincial Factories Act creates machinery for checking abuses of juvenile employment. The Factory Inspector in that as in several other provinces may require the employer to keep a birth certificate, or furnish an affidavit, of the age of all his employees under the age of sixteen, and "failure to produce the same," the section reads, "shall be *prima facie* evidence that the employment of such child or young person is illegal." Further, the Workmen's Compensation Board, which administers the act, is authorized to forbid the employment, in occupations deemed by the Board to be unwholesome or dangerous, of girls under eighteen and boys under fourteen years,

TABLE SHOWING SOME PROVISIONS OF FACTORIES ACTS OF THE VARIOUS PROVINCES OF CANADA.

	Nova Scotia	New Brunswick	Quebec	Ontario (b)	Manitoba	Saskatchewan	Alberta (c)	Br. Columbia
1. Minimum Age for Juvenile Employment.	14 for boys and girls;* special permits for younger children for employment in fruit preserving during season (a) Birth certificates required for employees under 16.	No age limit specified. Birth certificates required for employees under 16.	14, with educational test up to 16 years. Age certificates may be required for all boys and girls employed, and a physical examination may be ordered.	14, but school attendance, full or part-time, is required up to 16 years.	14 for boys and 15 for girls. Birth certificates required for employees under 16.	14 for boys and 15 for girls.	15.	14 for boys and 15 for girls (special permit for younger children in fruit and vegetable industry during season).
2. Dangerous or unwholesome occupations.	Boys under 16 and girls under 18 not to be employed.	Boys under 14 and girls under 18 not to be employed.	Boys under 16 and girls under 18 not to be employed.	Boys under 16 and girls under 18 not to be employed.		Boys under 16 and girls under 18 not to be employed.		Boys under 16 and girls under 18 not to be employed.
3. Hours of work of men and young persons.	For women, not fixed, for boys and girls under 16, 8 hours per day and 4 hours on Saturday. For girls under 18, 9 hours per day.	For women and girls 14-18, 10 hours per day, unless different appointment is made to give shorter Saturday.	For women, girls and boys under 18, 10 hours per day or 60 hours a week but an employer may make different appointment of hours to give shorter Saturday. In textile factories, 10 hours per day and 55 hours per week.	For women and girls, and boys under 16, 10 hours per day, unless different appointment of hours for on shorter day in week; 60 hours per week.	For women and girls, 15 to 18, 9 hours per day or 54 per week unless different appointment of hours to give shorter Saturday.	For women, girls and boys, 14 to 16, 48 hours per week.	Day shift for all persons must be between 7 a.m. and 6 p.m. (i.e. 10 hours). No special rule for women or young persons.	For women and girls, 15 to 16 years, 8 hours per day, 48 per week, unless different appointment for women or young persons made to give shorter Saturday.

4. Night work.	Women and girls in emergencies, under special permits not to work before 6 a.m. or after 9 p.m.	Working day between 7 a.m. and 6.30 p.m., women and girls in emergencies under permit not to work before 6 a.m. or after 10.30 p.m.	Working day between 7 a.m. and 6.30 p.m. (London) regular hours permitted in shops on Saturday, etc.) In emergencies under permits hours are 6 a.m. to 9 p.m.	Women and girls, in emergencies, under permit not to work before 7 a.m. or after 10 p.m.	No work after 6 p.m. except by special permit in emergencies under permit not to work before 7 a.m. or after 10 p.m.	Women (except by permit) not to work between 11 p.m. and 7 a.m. Night shift for any employee not to exceed 8 hours.	Women and girls, in emergencies, under permit not to work before 7 a.m. or after 8 p.m.
5. Hours in special circumstances, cases of emergency, etc., on permit.	For women and girls of 14 to 18, 12½ hours per day, 72½ hours per week for 36 days in year.	For women and girls, 14 to 18, 13½ hours per day, 81 hours per week, for 26 days in year.	For women and girls under 16, 12½ hours per day, 72½ hours per week for 36 days in year.	For women and girls, 12 hours per day, 60 hours per week for 36 days per year.	For women, girls, 15 to 18 and boys 14 to 16, 12½ hours in day, 72½ hours per week for 36 days in year.	For women and girls, 15 to 18 years, 9 hours per day, 54 per week, for 36 days in year.	For women and girls, 15 to 18 years, 9 hours per day, 54 per week, for 36 days in year.
6. Provision for meals.	For women, girls and children, 1 hour for meal at noon, and 45 minutes extra for evening meal between 5 and 8 p.m. in emergency employment.	For women and girls, 1 hour for meal at noon.	For women, girls and boys under 16, 1 hour for meal at noon and 45 minutes extra for evening meal, between 5 and 8 p.m. in emergency employment.	For women and girls, 1 hour for meal at noon and 45 minutes extra for evening meal, between 5 and 8 p.m. in emergency employment.	For women, girls, 16, 1 hour for meal at noon and 45 minutes extra for evening meal, between 5 and 8 p.m. in emergency employment.	For all employees, 1 hour for meal at noon.	For girls and women, 1 hour at noon and 45 minutes extra for evening meal between 5 and 8 p.m. in emergency employment.

TABLE SHOWING SOME PROVISIONS OF FACTORIES ACTS OF THE VARIOUS PROVINCES OF CANADA. (Continued).

	Nova Scotia	New Brunswick	Quebec	Ontario (b)	Manitoba	Saskatchewan	Alberta (c)	Br. Columbia
(6) Provision for meals (Contd.)	Inspector may direct employer to forbid women and children to take meals into workroom, and to provide suitable room for meals.		Inspector may direct employer to provide suitable place for meals, to forbid workmen to take meals in workshop, etc. Workers must in all cases have place to warm food and take meals in shelter.	Inspector may direct employer to forbid women, girls and boys under 16, to take meals into workroom, and to provide suitable room for meals; no person to take food into room where deleterious matter is exposed; attendant to be in charge of eating and dressing rooms where 35 employees.	Inspector may direct employer to forbid women and girls to take meals in workroom and to provide suitable room for meals. (The former rule is not applicable to home employment, or where young girls are not employed in a factory.)	Inspector may direct employer to forbid women and girls to take meals in workroom and to provide suitable room for meals. (The former rule is not applicable to home employment, or where young girls are not employed in a factory.)	Inspector may direct employer to forbid any employee to take meals in workroom and to provide suitable room. No person to take food in to room where deleterious matter is exposed.	Inspector may direct employer to forbid men and girls to take meals in workroom and to provide suitable room for meals. (The former rule is not applicable to home employment, or where young girls are not employed in a factory.)
7. Seats for employees.			Chairs to be provided for all employees whose work allows them to be seated.	Chairs to be available for shop employees.			Chair to be available for shop employees.	
8. Occupations forbidden for women and girls.	May not clean gearing machinery, etc., in motion. No girl may work between fixed and traversing parts of machine.	May not clean gearing machinery, etc., in motion nor work between fixed and traversing parts of machine.	May not be employed on belting or other transmission operations.	May not clean gearing machinery, etc., in motion. No girl may work between fixed and traversing parts of machine.	May not clean machinery in motion. No girl to work between fixed and traversing part of machine.	May not clean machinery in motion. No girl to work between fixed and traversing part of machine.	May not clean gearing machinery, etc., in motion.	May not clean machinery in motion. No girl to work between fixed and traversing part of machine.

9. Prevention of over crowding.	Health of employees not to be impaired by over crowding.	300 cubic feet of air space for each employee.	Health of employees not to be impaired by over crowding. Notices on doors to state number of workers allowed in room.	300 cubic feet of air space for each employee.	Health of employees not to be impaired by over crowding. Notices on doors to state number of workers allowed in room.
10. Ventilation and heating.	Air of work-room to be kept reasonably free of gas, etc. Special provisions for foundries.	Air of work room to be kept reasonably free of gas, etc., (applies to all factories, irrespective of numbers employed, where injurious dust is generated) minimum heat of 60 degrees. Special provisions for foundries.	Air of workroom to be kept reasonably free of gas, etc. (Applies to all factories, irrespective of numbers employed, where injurious dust is generated) Adequate heating required.	Air of workroom to be kept reasonably free of gas, etc. (Applies to all factories, irrespective of numbers employed, where injurious dust is generated) Special provisions for printing offices, bakeries, foundries.	Air of workroom to be kept reasonably free of gas, etc. (Applies to all factories, irrespective of numbers employed, where injurious dust is generated) Adequate heating required.

(a) The place where such children are employed to be separate from that in which the business of canning, cooking, etc., is carried on.

(b) Applies to shops as well as factories.

(c) Applies to shops and offices as well as factories.

\* An amendment of 1923 to the Education Act enables school authorities to raise the age for children coming under the act from 14 to 16 years in towns or cities.

and in the event of an accident causing the death of any boy under fourteen or of any girl under sixteen the employer, if blame is shown, "shall be liable to the same extent and in the same manner as the Board would be if such girl were of the full age of sixteen years or such boy were of the full age of fourteen years."

The provisions of the various factory act relating to the age of employment, hours of work, night employment, and in respect to the health and comfort of employees, are shown in the accompanying table, from which it will be seen that considerable diversity continues to exist in the practice of the several provinces of Canada.

---

### THE SCOPE AND AIMS OF VOCATIONAL EDUCATION.

IN order to assist the provinces in their efforts to develop adequate training systems for industrial workers, the Dominion Parliament, in 1919, passed the Technical Education Act setting aside the sum of ten million dollars to be expended over a period of ten years. Under the provisions of this Act the Dominion Government shares equally with the provincial governments all grants in aid of secondary vocational education in Canada. Vocational education which may be defined as that part of the training for life which has to do with one's present or future occupation is still in the early stages of its development in Canada, and it is difficult to predict the changes which will take place in the near future. The purpose of the Act is to promote any form of vocational, technical or industrial education or instruction deemed necessary or desirable in promoting industry and the mechanical trades, or in increasing the earning capacity, efficiency and productive power of those employed therein. Under the Agricultural Instruction Act, 1913, provision had been made for assisting the provinces to develop all forms of agricultural instruction. The Technical Education Act was enacted to provide similar assistance to other branches of industry for which adequate training facilities did not exist. Evidently it was intended that special efforts should be made to develop practical vocational training for boys and

girls intending to enter industrial occupations and for those persons, already employed, who needed special training to fit them for promotion or to increase their efficiency and earning capacity.

Since training schools for the professions, including teaching, engineering and nursing, had already been provided by provincial colleges and universities, and special assistance was being given by the Dominion government to agricultural education, it was agreed to confine grants under the Technical Education Act to vocational education of less than college grade, the controlling purpose of which is to fit young people for useful employment in skilled industrial occupations other than agriculture. The term "skilled industrial occupations" is interpreted to include all branches of work in trades, manufacturing, distribution, transportation, printing, applied art, homemaking and other human activities which require special training. Accordingly, the work which may receive assistance under the provisions of the Act includes industrial or trade training, commercial courses of less than college grade, homemaking courses, training in commercial or industrial art, and technical courses leading to industrial, commercial, household science and engineering courses in colleges and universities. Much valuable work along these lines is being done by industrial, private and religious schools throughout the Dominion but, as these schools are not part

of the publicly controlled system, they do not receive federal grants.

The scope and aims of the work being done by secondary vocational schools in Canada is indicated by the following list of courses which are eligible for grants under the Technical Education Act.

(1) Technical courses of secondary grade, conducted in technical schools, the purpose of which is to fit boys for entrance to engineering departments in universities or colleges.

(2) Industrial courses of secondary grade, the purpose of which is to fit each student for entrance into a previously selected trade or skilled occupation, either as an apprentice or improver or skilled worker.

(3) Commercial courses of secondary grade, the purpose of which is to fit young people for earning a livelihood in commercial occupations such as:—Bookkeeping, stenography, salesmanship, accounting, secretarial work, business administration, etc.

(4) Home economics or homemaking courses of secondary grade of at least two years' duration, the purpose of which is to fit girls for the duties and responsibilities of homemaking.

(5) Applied arts courses of secondary grade, the purpose of which is to produce skilled workers in the various branches of applied art, including commercial design, illustrating, poster work, show card writing, interior decorating, art metal work, etc.

(6) Prevocational courses of two or more years' duration commencing not earlier than grade VII, the purpose of which is to provide a variety of occupational experiences and information, while continuing the general training in English, mathematics and science, to boys and girls who do not intend to enter universities, in order that they may wisely select, after careful guidance and supervision, the most suitable

vocational training for their future life-work.

(7) Part-time vocational courses provided under compulsory school attendance laws and conducted during day working hours for the special benefit of young people who are employed.

(8) Continuation classes provided under compulsory school attendance laws, in which the training offered is directly related to the occupational needs of the students.

(9) Evening classes conducted for adults who are employed during the day and the purpose of which is to fit students for advancement in their occupations or to train them for other occupations.

(10) Short-term courses and special industrial courses—Day, short-term, unit courses for industrial workers or special students in secondary schools, the contents of which are confined to practical work and related subjects of direct vocational value to the students.

(11) Apprenticeship courses (other than part-time classes). Organized training for indentured apprentices in any occupation, which training should be supervised by a specially appointed official in the employ of either the school board, or an industrial corporation or an industrial organization responsible for apprenticeship in the industry.

(12) Foreman training courses — Organized training in industry or school for the purpose of improving the efficiency of foremen or for training competent workmen for the position of foreman.

(13) Teacher-training courses — Courses of various kinds (part-time, evening, short-term, summer school, etc.) which are conducted for the training and improvement of teachers and instructors in any branch of secondary vocational education.

## REPORT ON MINE EXPLOSION AT CUMBERLAND, BRITISH COLUMBIA

---

**A** REPORT on the explosion in No. 4 Mine, Canadian Collieries (Dunsmuir) Limited, at Cumberland, British Columbia, on February 8, has recently been made by Mr. George Wilkinson, formerly Chief Inspector of Mines in British Columbia, who was appointed to investigate the disaster. This report states that "indications are that the cause of ignition was a match lighted for some illicit purpose, close to where the body of the Chinaman Jung Tow was found, in the return air from No. 2 East Level and in the vicinity of where explosive gas was known to exist." Nineteen out of the thirty-three who lost their lives were overcome by afterdamp, some being within seventy feet of safety when overcome, after they had travelled distances varying from 80 to 1,100 feet.

No. 4 Mine, it is said, is very extensive, and has been in operation for twenty-five years. It consists of two haulage slopes, which converge at a point about 50 feet from the portal. The explosion was in No. 1 Slope. An accident also took place in No. 2 Slope on August 30, 1922, in which 18 lives were lost (See LABOUR GAZETTE, October 1922, page 1,113). The ventilation of the mine is maintained by two fans, each slope having a separate intake and return airway.

The report says that no men escaped out of No. 2 East Level and that explosive gas had been found and reported on the rise side of this level, intermittently for over two weeks, and had existed there practically steadily for five days prior to the explosion. Evidence given at the inquest by firebosses in charge of this section went to show that the amount of gas in this particular place at times assumed serious proportions. Mr. Wilkinson in commenting on the reports of firebosses states that no idea is given as to the size of a gas cap, if such is found, or the percentage of methane that may be in the air. The report adds:

From the evidence given at the inquest it is apparent that the officials actually in charge of operations at the faces do not give enough serious thought as to the danger of allowing miners to continue at work at the face when accumulations of explosive gas are present in the vicinity. This was brought out very plainly at the inquest by the cross-examination of the fireboss in charge of this district. The evidence of the fireboss on the morning shift would indicate that there was at least 236 cubic feet of methane, the inner end of which was within twelve feet of the working face, when he visited No. 2 East Level on his rounds, yet he admits in his evidence that he allowed the men to remain at work. What the conditions were during the afternoon of the explosion unfortunately cannot be ascertained. It would seem advisable that in a place where conditions arise such as those in No. 2 East Level, no one but the most skilled and careful miners should be allowed to work.

It has been already demonstrated both at this explosion and the one previous that small accumulations of explosive gas are very dangerous in this mine when working on the long-wall system, as no doubt the explosion is fed by gas drawn out of breaks in the roof, which are incapable of examination.

If the evidence of the two firebosses as given by themselves at the inquest is to be credited, it is very apparent that they are not making reports showing the actual conditions, and these reports are misleading to their superior officers. Some of them are not carrying out the provisions of the Coal Mines Regulation Act at times regarding blasting. The night-shift fireboss admits in his evidence that he fired a shot on the high side of No. 2 East Level, at half-past four on the morning of February 8, and that after firing this shot he found explosive gas about twelve feet away, and he further admits he did not examine so far back before he fired the shot. The 'Coal Mine Regulation Act' requires that he shall examine all places contiguous thereto for a radius of twenty-five yards.

With regard to the practice of employees taking matches and smoking materials into the different mines in the province, the report points out that it is becoming so serious that drastic methods should be taken to stamp it out. During 1922 there were fourteen convictions, one being against an oriental, one against a coloured man and twelve against white

men. In 1923, up to the time the report was issued, three orientals and eight white men were convicted of offences against the Coal Mines Regulation Act, most of them having to do with the carrying of smoking materials and matches while at work in the mines.

Most of the accidents occurring in the coal mines of British Columbia, Mr. Wilkinson claims, are readily traceable to laxity or indifference on the part of the officials locally in charge of the workings, or to the employees themselves. "It may be charitable to give verdicts of accidental death, misadventure, and error of judgment", he says, "but the fact remains that they could better be classed as downright carelessness or indifference". With the object of eliminating to some extent the indifference and carelessness, he makes the following recommendations:—

That the Coal Mines Regulation Act be amended to increase the maximum pecuniary penalty for violations, to one hundred dollars instead of ten dollars, as at present.

That regulations be prepared and issued by the Department of Mines to standardize the form of fireboss reports, so that the conditions with regard to inflammable gas will be described by a compulsory statement, in cubic feet, of all explosive gas found; and that the length of gas caps be stated in inches or fractions of an inch.

With regard to mine rescue apparatus, it is pointed out that by the time crews are organized and transported to the scene of the accident, valuable time is lost, and employees who have been unin-

jured by the explosion rush out to try and reach safety, with the result that many are overcome by the deadly afterdamp. In rare cases, it is stated, rescue is effected where men have stayed in their working places or near the face. "If any large effectual life saving is to be done", the report states, "it will have to be done through some type of portable apparatus that can be carried around by a miner and donned quickly after an explosion occurs, in a manner similar to that employed by the soldiers at the front. An apparatus of this kind would be ineffective in an atmosphere where the oxygen content is completely destroyed or very low; but in the case of the escape of men from districts that have not been affected, except possibly by a limited quantity of smoke or afterdamp, it would be very effective. With some apparatus of this type, it is highly probable that nineteen of these men would have escaped from this explosion, as no doubt the oxygen content was sufficient to sustain life."

The report draws attention to a portable mask called the "Self Rescuer", which is now being thoroughly investigated by the Department of Mines, it being stated that if it can be perfected and if it will last for one hour in an atmosphere containing afterdamp but with sufficient oxygen to sustain life, a similar loss of life might be avoided.

## WORKMEN'S COMPENSATION IN ONTARIO IN 1922.

---

**T**HE Workmen's Compensation Board of Ontario recently issued their report for 1922, the eighth year of the operation of the Provincial act. It is pointed out that the statement is necessarily provisional, being in part made up of estimates. Adjusted figures for the previous year also are given, the actual cost of all accidents happening during 1921 having been determined and the assessments accordingly adjusted since the publication of the previous report.

In a general review prefacing the report the statement is made that "though the Ontario Act is now providing, it is believed, the most liberal benefits of any compensation law upon the continent, it is very far from being the most expensive upon employers. This is largely because very little of what the employers pay goes for administration, or other expenses, and because the immense overhead and profit loading which are inevitable in ordinary insurance are absent. Apart from the cost of accident prevention or safety associations, nearly \$98 out of every \$100 which employers pay goes directly for the benefit of injured workmen or their dependents. And there is no litigation and a minimum of trouble and expense for both workmen and employers." It will be recalled that under the Ontario Act most of the industries covered, including all those enumerated in Schedule 1, are upon the collective liability principle, but a smaller number, including railways, navigation companies, municipalities, etc., (Schedule 2) are under individual liability, paying for accidents as they occur, instead of being assessed, as are industries under Schedule 1, to provide a general fund out of which the Board pays the cost of accidents. Showing the volume of business now handled by the Board it is stated that in 1922 the

number of accidents reported daily averaged 168, the number of cheques issued per day averaged 496, and the benefits awarded averaged \$18,967 per day. About 3,000 pieces of mail are handled by the Board each day.

Measured by the number of accidents which were dealt with and by the total benefits awarded during the year, the work of the Board showed some increase in 1922 over 1921. Reports of 50,411 accidents were received as compared with 45,191 in the preceding year and 54,851 in 1920. These figures, however, include some accidents not serious enough to require compensation or medical aid. The number of accident cases in which compensation or medical aid was awarded was 42,509 in 1922, 40,266 in 1921, and 47,851 in 1920. The number of fatalities reported in 1922 was 418 (of which 331 had been already paid for at the close of the year), 386 in 1921, and 452 in 1920. Permanent disability cases numbered 1887 in 1922 and 2,251 in 1921. The report points out that the permanent disability cases, while they form only a small percentage of all the accidents reported, represent nearly one-half the total amount of compensation awarded; death cases cost little less than one-quarter, and temporary disability cases cost a little over one-quarter of the total compensation.

The total benefits awarded during 1922 included \$5,000,077 for compensation and \$692,820 for medical aid, the total amount \$5,692,897 comparing with a total of \$6,189,263 for the previous year. The amount of payments does not strictly correspond with the number of accidents from year to year since the amount of compensation varies with the average wages of the workmen as well as with the number and severity of the accidents.

Of the total compensation payments \$3,417,102 was in Schedule 1 industries, \$1,184,669 in Schedule 2 industries and \$398,306 in Crown industries. The medical aid payments were entirely in connection with Schedule 1 industries, since this service is furnished by the employers at their own cost both in Schedule 2 and in Crown industries.

The total wage expenditure, in 1922, of industries coming under Schedule 1 was \$361,520,512, as compared with \$355,259,287 in 1921, and \$464,589,211 in 1920. The Board has no similar data for Schedule 2 and Crown industries as payrolls are not required to be filed, compensation and medical aid forming an individual liability; but it is estimated that the payroll is probably one-third of that of Schedule 1.

Based on provisional figures, the estimated average rate of assessment for 1922, in Schedule 1 industries, was \$1.08 for each \$100 of payroll, as compared with \$1.34 for 1921. The heaviest payments are those in connection with the lumbering and building industries; the group including steel construction, railway and canal construction, dredging, fishing, etc., comes next, followed by mining and explosives, metal articles, road construction, brick manufacturing and quarrying, etc., and pulp and paper, in the order named. During 1922, 23,613 assessments, including refunds, were issued, as compared with 23,677 in 1921.

Payments to safety or accident prevention associations during the year amounted to \$69,226, the associations being as follows: the Industrial Accident Prevention Association, which received \$53,576, the Lumbermen's Safety Association, the Ontario Pulp

and Paper Makers' Safety Association, and the Electrical Employers' Association. The assets of the Board totalled \$15,870,977, and the liabilities \$14,993,450 at the close of the year.

Administration expenses, to which reference is made above, were in the ratio of 2.36 per cent of the compensation and medical aid awarded during the year.

#### Method of Rating under the Ontario Act.

The following explanation of the method of rating under the Workmen's Compensation Act of Ontario forms the introduction to a separate publication by the Board, giving a table of rates for 1923.

For assessment and compensation purposes under the Act the industries covered are divided into 24 classes. Each class stands upon its own footing and carries its own burden, except that a very small general fund, one per cent, per year, known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may arise in any class. With the exception of this Disaster Reserve the moneys collection are just what are considered necessary to take care of the accidents that have actually happened.

Separate accounts are kept of all assessments received and all compensation and medical aid awarded for each of these classes. Each of the 24 classes of industry is thus in effect a mutual insurance association of the employers in that class.

The rates for each class are fixed and the assessments made much in the same way as a municipality levies its taxes. They are governed by the requirements.

The rates fixed for the year are intended to cover the burden for that year. At the beginning of the year each employer is required to furnish the Board with an estimate of his probable pay roll for the year and he is assessed provisionally upon that estimate. At the end of the year the actual amount of pay roll is ascertained and the assessment is adjusted accordingly, the rate provisionally fixed being also altered where the accident experience shows this to be necessary.

The rates are fixed in accordance with the accident experience. The amount of compensation and medical aid and the amount of assessments in the class for the preceding year are ascertained, an estimate being made of the amount still remaining to be paid for accidents which, by reason of continuing disability or for lack of reports, have not been finally disposed of before the end of the year, and allowance being also made for the difference between the estimates given by employers at the beginning of the year and the actual figures as ascertained and shown in their pay roll statements at the end of the year. In this way the total expenditure and the total income of the class for the year are arrived at as nearly as possible, and the sufficiency or insufficiency of the rate charged determined.

If it is seen that the rate charged has produced sufficient money, or if the surplus or deficit is small the rate will be maintained. If there is any considerable difference, it will be increased or decreased accordingly.

It is to be remembered always that any surplus to the credit of a class

remains in the class funds, and this is also taken into consideration in fixing the rates.

All industries in the same class do not necessarily, nor usually, bear the same rate. The classes are subdivided into groups, and even within the group the rate are different where this is shown to be justified. The experience is kept for the group as well as for the class. In fixing the rates, however, regard must always be had to the fact that each class is an insurance group and that all lines of industry in the class must share to some extent the good or ill fortune of the class as a whole. The rating for each separate line of industry cannot be made to depend upon the experience in that particular line alone. This is especially the case where the total amount of the pay rolls in any line of industry is small. To charge that line of industry with its own cost might place a very excessive burden upon its employers for one year while perhaps relieving them almost wholly from assessment another year. This would destroy the underlying principle of collective liability or mutual insurance which is the basis of the system.

Individual distinction between employers even in the same line of industry is made according to their accident experience by a system of merit rating. Where the accident cost exceeds or falls short of the amount of assessment by a stated percentage a merit rating charge or a merit rating refund, within specified limits, is made accordingly. It is not the intention to make the next application of merit rating until the experience for three years following the last merit rating has been ascertained.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA.

Reports by Dominion Bureau of Statistics on (a) Leather Boot and Shoe Industry, 1921; (b) Biscuit and Confectionery Industry, 1921.

**R**EPORTS were received during the month from the Dominion Bureau of Statistics with regard to the leather boot and shoe industry in Canada, 1921, and the biscuit and confectionery industry in Canada, 1921. (The former report contains not only statistics for the year 1921 but a brief historical sketch of the industry and statistics for the census years from 1871 to 1921 and principal statistics for the five-year period 1917 to 1921). Previous reports in this series relating to various industries for 1921 and 1920 were outlined in the issue of the LABOUR GAZETTE for April 1923 and in previous issues. A report on the leather boot and shoe industry during 1920 is contained in the issue of May 1922, and on the biscuit and confectionery industry, 1920, in the issue of July 1922.

### The Leather Boot and Shoe Industry during 1921.

The report on the leather boot and shoe industry during 1921 covers the operations of 177 factories as compar-

ed with 173 in the previous year, five additional factories being reported in operation in the province of Quebec and one less in British Columbia. The production of 1921 was lower in value than that of any year since 1917, and showed a decrease of 33 per cent as compared with the previous year, the totals being \$66,817,174 and \$44,665,381 for 1920 and 1921 respectively. The decrease in 1921 is accounted for as due in part to a general falling off in the prices of leather and in part to a decrease in the quantity of production, the production in 1921 being 14,745,851 pairs as against 17,693,966 pairs in 1920. There were 259 more employees (132 males and 127 females) engaged in the industry in 1921 than in 1920. In 1921, there was, however, a decrease of \$2,130,242 in the payroll. The capital invested in the industry in 1921 was \$31,644,855, a decrease of \$2,702,171 from the previous year.

The following table shows the principal statistics by provinces for the year 1921:

Province	Factories	Capital	Employees		Salaries and wages	Cost of materials	Value of product
			Male	Female			
Nova Scotia.....	\$ 4	\$ 999,191	193	35	129,367	220,972	435,932
New Brunswick.....	5	939,977	261	147	350,645	775,989	1,493,194
Quebec.....	98	17,540,654	5,304	3,172	6,982,519	13,905,135	26,309,522
Ontario.....	66	11,889,778	2,732	1,615	4,486,197	8,144,382	16,020,759
British Columbia.....	4	275,255	76	24	126,300	242,705	405,974
	177	31,644,855	8,496	4,993	12,075,028	23,379,183	44,665,381

The number of employees of different classes by sex, and the amount paid

in salaries and wages is shown in the following table:

Classes of employees	No. of employees		Salaries and wages
	Male	Female	
Officers, managers, etc....	564	31	1,894,985
Salaried workers, clerks, salesmen, etc.....	743	308	1,602,102
Wage-earners, average number .....	7,001	4,267	8,418,832
Outside piece workers.....	188	387	159,100
Totals .....	8,496	4,993	12,075,023

A classification of employees according to weekly wage earnings as at December 15, 1921, is shown below:

Weekly wage	Male	Female	Total employees
Under \$5.....	192	310	502
\$5 but under \$10....	788	1,342	2,130
\$10 but under \$15...	1,135	1,593	2,728
\$15 but under \$20...	1,451	1,005	2,456
\$20 but under \$25...	1,509	328	1,837
\$25 but under \$30...	1,085	104	1,189
\$30 and over .....	1,602	34	1,636
Total .....	7,762	4,716	12,478

#### The Biscuit and Confectionery Industry during 1921.

Decreases appeared in every item on the schedule as compared with 1920;

there were 28 fewer establishments reporting, capital decreased by \$561,992, the number of employees by 1,436, salary and wage payments by \$801,502, fuel costs by \$46,369, miscellaneous expenses by \$142,119, the cost of raw and partly manufactured materials by \$8,338,982 and the value of production by \$7,900,819. The large decreases in materials and products were due to the decline in the prices of commodities; the percentage of decrease in commodity prices in 1921 varied from 21.8 per cent for chocolate to 40.0 per cent for sugar and glucose. Of the 1,436 decrease in the number of employees, there was a decrease of 1,427 in the number of employees on wages (293 males and 1,134 females). The number of employees on outside piece work showed a decrease of 17 males and an increase of 4 females, and among clerks, typists, etc., there was a decrease of 86 males and 6 females. The following table gives some of the principal statistics of the industry:

Province	No. of plants	Capital	No. of employees	Salaries and wages	Cost of materials used	Value of products
Prince Edward Island.....	4	\$ 27,592	8	\$ 5,081	\$ 20,060	\$ 31,140
Nova Scotia.....	9	1,725,513	1,108	826,707	1,447,460	3,577,463
New Brunswick.....	10	1,829,965	662	563,201	1,338,352	2,823,506
Quebec .....	38	6,008,233	2,566	1,827,948	4,838,710	9,268,470
Ontario .....	207	17,936,774	5,637	5,210,921	11,918,618	25,296,313
Manitoba .....	24	1,013,184	547	543,794	1,383,447	2,474,338
Saskatchewan .....	8	40,622	18	25,185	36,298	79,316
Alberta .....	26	796,473	260	253,037	697,345	1,356,012
British Columbia .....	46	1,277,233	473	480,915	919,323	1,845,956
Canada .....	372	30,655,589	11,286	9,736,789	22,600,821	46,758,014

The number of employees of different classes, by sex, and the amounts paid in salaries and wages are shown in the following table:

	Classes of employees		Salaries and wages
	Male	Female	
			\$
Salaried officers of corporations .....	144	9	594,151
General superintendents and managers.....	173	19	442,042
Technical experts, accountants, etc.....	59	10	106,498
Clerks, stenographers, salesmen, etc.....	920	376	1,654,850
Employees on wages, average No.....	4,170	5,365	6,936,458
Outside piece workers....	29	12	2,790
Totals .....	5,405	5,791	9,736,789

A classification of employees according to weekly wage payments within specified groups is given below:

Weekly wage	Male	Female	Total employees
Under \$5.....	71	142	213
\$5 but under \$10...	394	2,149	2,543
\$10 but under \$20...	2,020	3,803	5,823
\$20 but under \$30...	1,605	127	1,732
\$30 but under \$40...	479	1	480
\$40 but under \$50...	56	.....	56
\$50 and over.....	13	.....	13
Total .....	4,638	6,222	10,860

The number of males under 16 years of age numbered 117 or a little more than 2½ per cent, while the females under 16 were 395 or approximately 6.35 per cent.

JUDICIAL DECISION RESPECTING PICKETING

AN important legal decision respecting picketing was recently delivered in the Superior Court of Quebec, District of Montreal, in the case of Dame Hannah Bercowitch *et al* vs. the Joint Board of the Cloak and Suit makers' Union of Montreal, *et al*. The plaintiffs applied for an injunction against the union and three of its officers to restrain them from certain illegal acts which they were alleged to have committed in the course of a strike, and asked for damages. In the judgment, which was delivered by Acting Chief Justice Martin, an injunction was granted, the union was condemned to pay damages, and all the defendants were condemned to pay the costs of the proceedings.

The complete text of the judgment is as follows:

The plaintiffs are manufacturers of ladies' cloaks, suits and other garments, having their respective places of business in the building No. 54-60 Crescent Street, Montreal which building is owned by Myer Dobrofsky, the

husband of one plaintiff and the father of the other.

The business, of which the wife is the registered proprietor, is carried on under the name of Empire Garment Company, that of the son under the name of the Montreal Garment Company. The former is a union shop and the latter is not.

On or about the 22nd of January last, there was a strike in the premises of the Empire Garment Company. The present proceedings are instituted against The Joint Board of the Cloak and Suit Makers' Union of Montreal, an unincorporated association having its office in Montreal and all the local branches and subsidiary associations of said Joint Board of the Clak and Suit Makers' Union, and Joseph Schubert, secretary, Thomas Jacobs, business agent, and Philippe Martel, organizer, all of Montreal aforesaid, as well personally as officers and organizers of the said Joint Board of Cloak and Suit Makers' Union, Plaintiffs alleging that the Defendants, by means of organized picketing and besetting the places of business of Plaintiffs, have intimidated Plaintiffs' employees and prevented such employees and customers from entering the establishments, and they pray for an injunction against Defendant restraining such illegal acts and for damages.

An interim order of injunction was issued by Mr. Justice Surveyer restraining the defendants, their officers, agents and representatives, from assaulting, molesting and interfering with plaintiffs' employees or from picketing in front of or in the neighbourhood of plaintiffs' places of business with the view to intimidating plaintiffs' employees.

The defendants pleaded to the action averring that the Empire Garment Company was a union shop and that the latter had not lived up to its agreement with the union as to the guaranteed minimum of employment, as to overtime, and as to diverting work from the Empire Garment Company to the non-Union shop of the Montreal Garment Company, that the defendants did not issue any strike call and did not order the strike, but that the employees, exasperated at plaintiffs' bad faith, of their own volition laid down their tools and walked out as they had a right to do, and that they picketed the plaintiffs' premises for the purpose of notifying to prospective employees unacquainted therewith the breaches of plaintiffs' contract and the resultant strike, and that they had a right to strike and to make known to the public the fact that there was a strike and that the picketing had been peacefully and quietly carried on. They also aver that plaintiffs were not the owners of the business and that if plaintiffs have suffered any damage, it was due to their own fault and breach of contract.

By the answer to plea, plaintiffs aver that defendants were responsible for the strike and took part in the illegal picketing which followed.

Issue was joined on the petition for injunction substantially to the same effect and the case tried before me and submitted as well upon the petition for the injunction as upon the merits.

Dealing first with the preliminary question raised that Myer Dobrofsky, the husband and father of the plaintiffs, is the owner of the businesses and the real plaintiff, I am not disposed to dismiss the action on this ground. True, there were some loose and more or less irrelevant assertions by Myer Dobrofsky that the business was his, but I think all he implied in such expressions was that he was intimately associated with and interested in the businesses and it is quite natural that he should be.

It would appear that the Empire Garment Company business was formerly carried on in his name but as he became involved in real estate investments, his wife became the registered owner of the business. As to the other business carried on by his son, he supplied the son with the machinery. The son is the registered owner, though the father no doubt keeps a paternal eye over the business of his son.

It is unnecessary to decide as to who is the real and ultimate owner of these businesses. The ostensible and registered owners are the parties, the plaintiffs before this Court, and the illegal acts alleged and invoked against Defendant were committed with respect to the Empire Garment Company and the Montreal Garment Company, and the parties before the Court are the registered owners of that business and entitled to complain.

The existence of a strike in the premises of the Empire Garment Company is abundantly established, in fact, it is impliedly admitted in defendants' plea. The participation of the defendants in that strike and in the picketing of plaintiffs' premises which followed is abundantly established.

I am not called upon to enquire into and decide on the merits of that strike, whether it was justified or not. Leaving aside the question of responsibility for damages, I assume that employees may strike if they want to. That is not what is complained of. It is rather the concerted effort to prevent others from working of which plaintiffs complain.

If employees make up their minds individually or even concertedly not to work and go on strike, that is their own affair, but if they agree to watch and beset a man's place of business to interfere with or prevent him from carrying on his lawful business, such act is wrongful.

I think the legal principles governing cases of this kind, at least, so far as this province is concerned, are laid down in the reported case of *International Ladies' Garment Workers Union & Rother*, 34 K.B. 69. Mr. Justice Rivard (86) very clearly and tersely expresses the law of picketing when he says:—

“Et puisqu'il s'agit ici de “picketing”, ajoutons que le fait d'organiser des groupes et de les envoyer à l'entrée des usines, dans le but d'empêcher les ouvriers de travailler, est une manœuvre frauduleuse ou un acte de violence ou de menace, constituant un délit qui porte atteinte à la liberté du travail”.

[*Trans.*— And since this is a matter of picketing, we add that the fact of organizing groups and sending them to the entrance of shops for the purpose of preventing the employees from working is a wrongful proceeding, or an act of violence and intimidation, constituting an offence which is directed against the freedom of labour.]

Of course, each case must be considered and determined on its own facts. In the present case, it is established by *Sergt. Laporte* of No. 10 Station that on the 22nd. of January he was called to Crescent Street about 6 p.m. opposite the premises of Plaintiffs and found there fifty or sixty employees speaking and

shouting. He recognized the defendant Martel and some of the others. He told them to move on, but Martel said that he had business there. The following morning at 7 a.m. he found seven men and four women picketers, Martel being among them. In the evening of the same day, there were five men and four women picketers there. On the 24th at 6 p.m. there were fifteen men and three women picketing, four in front of the premises and the rest of them walking up and down. Jacobs, one of the Defendants, was among them and several of them remained until about 8.30 p.m. On the 25th at 6 p.m. there were five men and three women picketing in front of the premises. He was not on duty on the 26th but was on duty on the 27th and arrested four of the picketers.

The interim injunction was issued on the 26th.

This evidence was corroborated by other constables.

It is established that several of the employees of the Montreal Garment Company who remained and others hired to replace employees of the Empire Garment Company who had gone out on strike, were housed and fed in the building. They were afraid to go home.

Albert Musicant was an operator in the Montreal Garment Company. He saw defendants Jacobs and Schubert there. Someone took him by the arm, called him a 'scab' and other unpleasant names, and he was so afraid, as a result of this treatment, that he slept in the building where the plaintiffs' business was carried on, for a period of three weeks. About a dozen or more slept there. He says he was afraid that he would get hurt.

J. Silverman, an employee of the Empire Garment Company, had his windows broken, milk bottles thrown through them, but cannot identify who did it.

Alec Emerson, a tailor working for the Empire Garment Company, was threatened by four men; thinks they were connected with the Union; they told him he had better quit or he would be treated like Izzy, the tramp, that is, would lose an eye; says he does not know the names of these four men, but he had seen them at the union meetings. They were not officers of the union. He was afraid of his life.

Cohen was shop chairman in the Empire Garment Company. He does not quite know the reason of the strike, though it would appear to have been because of the employment of three non-union men in the non-union shop of the Montreal Garment Company. He told Rosenthal, the superintendent of the Empire Garment Company, that they had been ordered to go out on strike and they went out right away.

Jacobs, one of defendants, told the men to picket, to tell anyone who came along to go into the plaintiffs' premises that there was a

strike on. He reported to the union that a strike had been called. He says that all negotiations previous to the strike were conducted through him as business manager of the union; that he also instructed the strikers to picket.

Schubert addressed the employees on strike on the subject of picketing. He told them to walk up and down in front of the plaintiffs' premises and report who went in and who came out.

Martel, as organizer for the union, was actively interested in the matter of the strike. He went to Crescent Street after the strike and reported to the union on the question of picketing and said that the police were interfering with some of their picketers. He spoke to a woman whom he did not know, entreating her to join the union. He addressed meetings of strikers and advocated picketing and says that he thought it was his duty to do so.

What was the object and effect of all this demonstration? No doubt it was to prevail upon and prevent others from working for plaintiffs. It also had the effect of preventing customers from getting into plaintiffs' places of business, and I would hold this to be an actionable wrong.

When urged by officers of the union to picket places of business, strikers are apt to exceed the bounds of mere peaceful persuasion, and I have no doubt what the defendants did produced a state of fear in the minds of the plaintiffs and those employees who desired to remain at work for plaintiffs. This is evidenced by the fact that employees were housed and fed for a considerable time in the premises and the assault and threats of assault would produce the same effect.

Whatever may have been the cause of the strike or the manner it was put into effect, I am satisfied defendants were all active participants in carrying on the picketing complained of and should be restrained by injunction.

The whole purpose of placing these pickets around plaintiffs' establishment was to interfere with their business and intimidate those employees and others who desired to continue in plaintiffs' employ; and in going to and from work, all employees are entitled to use the streets and sidewalks without obstruction or molestation.

The action of the defendants was an unjustifiable invasion of the property rights and business of the plaintiffs and an obstruction and annoyance savouring of intimidation. The restraining order should go enjoining the defendants from molesting or interfering with plaintiffs and from in any way picketing in front of or at their places of business or from besetting or watching such places of business or the residence of any of plaintiffs' employees or from following them with a view to in-

limitating the latter from entering or remaining in plaintiffs' employ.

There is some general evidence tending to establish a money loss to plaintiffs by reason of defendant's unjustifiable interference with plaintiffs' business. It is said that plaintiffs had to pay more and obtained less results than before the strike; that the time chosen for the strike was a busy season; that some confusion and loss of time was occasioned by a wanton mixing of parts of garments cut out and in course of manufacture, as well as some expen-

diture for housing and feeding the employees who were afraid to go home. It might be questioned whether the whole of this damage on the basis of plaintiffs' computation could be charged against the defendants.

Having given the matter my best consideration, I am disposed to and do condemn the defendant, the Joint Board of the Cloak and Suit Makers' Union, in the sum of \$200 with interest. All the defendants are jointly and severally condemned to pay the costs of the present proceedings.

## INDUSTRIAL ACCIDENT PREVENTION ASSOCIATION OF ONTARIO.

**T**HE annual meeting of the Industrial Accident Prevention Association of Ontario was held at Toronto on March 6, under the chairmanship of Mr. J. S. McCannell of the Milton Pressed Brick Company. Over 25 cities and towns were represented. Addresses were delivered by the chairman, by Mr. J. E. Walsh, general manager of the Canadian Manufacturers' Association and by Mr. W. C. Coulter, chairman of the Industrial Relations Committee of the Canadian Manufacturers' Association.

The general manager of the Association, Mr. R. S. Morley, presented a report showing that during the year over 425,000 posters and other material had been distributed to employers in about 7,000 plants in the province. He also reported that the Association had at present an inspection force consisting of a chief inspector and six assistant inspectors and that there was a marked improvement in the manner in which employers were co-operating with the inspectors. Approval was expressed of the action of the Workmen's Compensation Board in changing its merit rating plan from an annual to a triennial basis. The financial statement showed expenditures of about \$53,000 which, it was stated, was well inside the budget presented last year.

A statement presented by Mr. S. Price, chairman of the Ontario Workmen's Compensation Board, showed that 50,411 accidents had been reported to the Board

in 1922. Of this number 418 were fatal. The total number of accidents reported in 1921 was 45,191, and in 1920, 54,851. It was pointed out that the increase in the number of accidents did not, so far as tabulations had proceeded, indicate a bad accident cost experience. Total benefits awarded had amounted to \$5,692,896 as compared with \$6,189,263 in 1921, the decrease being accounted for to a considerable extent by the decrease in workmen's average earnings, as well as by the good accident experience in a number of the industries. The amount paid for medical aid was \$692,819 (including doctor, hospital and nurses' bills), as compared with \$662,793 in 1921. The Board's administration expenses showed a slight decrease. Mr. Price stated that the figures did not represent the number or cost of accidents actually happening during the year, but they were for the work handled, and that the amount awarded was therefore not correct basis for fixing rates of assessment. In 14 out of 24 classes for which tabulation of provisional statements of accident costs had been completed, nine belonged to the Industrial Accident Prevention Association. Eight of these nine classes (the woodworking industries; foundry; rolling mills; heavy iron; light iron; agricultural implements, automobiles, etc.; and the abattoir class) had a good showing but the quarries, stone crushing and brickmaking class had an unfavourable experience.

The following officers were elected: Chairman, A. R. Goldie, of Goldie and McCulloch Company, Galt; first vice-chairman, George Valentine of the Massey-Harris Company, Toronto; second vice-chairman, J. C. Callaghan, of the

Steel Company of Canada, Hamilton. These with the representatives of the class safety associations under the Workmen's Compensation Act, comprise the executive committee of the Association for the ensuing year.

---

### BRITISH POLICY RESPECTING INTERNATIONAL LABOUR CONFERENCE CONVENTIONS.

ON May 9, Sir Montague Barlow, Minister of Labour, speaking in the British House of Commons, outlined the policy of the British Government with reference to the draft conventions and recommendations of the Third and Fourth Sessions of the International Labour Conference. (The texts of these conventions and recommendations appeared in the LABOUR GAZETTE for January, 1922, and December, 1922, respectively.) With regard to the convention prescribing that children under fourteen should not be employed in agriculture during school hours, but allowing exemptions, provided school attendance was not reduced to less than eight months, this represented the law in England, but with regard to Scotland a difficulty arose because exemption from school attendance was in the hands of local authorities, which was not the case in England. The Government had therefore decided to refer to the International Labour Organization the question whether exemption certificates should not be granted in England as in Scotland. The government proposed to ratify the convention securing to agricultural workers the same rights of association and combination as were enjoyed by industrial workers; also the convention placing agricultural workers on the same footing as industrial workers in regard to compensation for injuries. With regard to the draft convention prohibiting, with certain exemptions, the use of white lead in painting interiors of buildings and prohibiting the employment of males under

eighteen years of age and of females in any painting work involving the use of white lead, the Minister stated that serious misunderstandings as to the interpretation of this convention had arisen. In view also of the report of the committee on the use of lead in paints (see note on page 580), it was decided to give the matter further consideration. The draft convention concerning the weekly rest day in industrial undertakings provided for arrangements that would be very difficult of application in Great Britain, and the Government, therefore, did not propose to ratify it.

The Government were in favour of prohibiting the employment of persons under eighteen as trimmers and stokers at sea, subject to certain exceptions, and making compulsory the medical examination of persons under eighteen employed on board ship. A bill would, accordingly, be introduced to give effect to these draft conventions. The Government could not accept the recommendation that each member of the Industrial Labour Organization should consider measures for providing against unemployment in agriculture until it was made clear that it did not necessarily involve unemployment insurance provisions being applied to agriculture. The Government did not propose to adopt the recommendation dealing with the protection of women wage-earners in agriculture before and after childbirth as it would confuse the present system under which agriculture women

workers had precisely the same protection and assistance as had other women workers in England. The Government proposed to accept a recommendation in favour of ensuring women wage earners in agriculture not less than nine consecutive hours abstention from work at night. It would accept the recommendation that children under fourteen years of age should have ten consecutive hours' abstention from work, but would not accept the recommendation that children between fourteen and eighteen years should have nine consecutive hours abstention. They would also accept the recommendation concerning the development of agricultural technical education but would not accept the recommendation regarding living-in conditions of agricultural workers, as it seemed to involve an infringement of personal liberty, nor would they accept the recommendation concerning social insurance in agriculture. The Government would not accept the recommendation of a weekly rest day for commercial establishments as the staffs of commercial establishments do by custom enjoy this weekly rest, but in the limited number of cases where Sunday trading is practised, its regulation would involve considerable

difficulties. The 1922 Conference adopted only one recommendation, which dealt with statistical and other information with regard to emigration. The Government proposed to accept Article (1) providing that members of the Organization should communicate to the International Labour Office all available information concerning emigration and the transit of emigrants, and Article (2) providing that members were to communicate the total figures of emigrants, but they could not accept without substantial alterations Article (3) which provided that members should, if possible, conclude agreements with other members for the adoption of a uniform definition of the word "emigrant", uniform identity papers, and uniform methods of recording statistics. With regard to a further proposal of this conference to increase the number of the governing body from twenty-four to thirty-two, the Government were in communication with the Dominions and India on this subject.

A motion approving the policy of the Government respecting these draft conventions and recommendations was subsequently agreed to, an amendment opposing it being defeated by a vote of 176 to 235.

---

### JUDGMENT OF UNITED STATES SUPREME COURT CONCERNING THE RIGHTS OF PRIVATE EMPLOYERS.

**A**N important judgment was rendered on June 11 by Chief Justice Taft of the Supreme Court of the United States. The case involved the question of the right of the Kansas Court of Industrial Relations of fix the wages which shall be paid by an employer who is engaged in an industry the classification of which as "clothed with a public interest" is open to doubt. The Supreme Court found that the action of the Kansas Court in fixing wages in an industry of this character was in conflict with the Fourteenth

Amendment to the United States constitution, inasmuch as it deprived the employer of his property and liberty of contract without due process of law.

The judgment involves the validity of the Kansas Court of Industrial Relations. The act which established the Kansas Court declared certain industries to be affected with a public interest, including the manufacture of food and clothing, the production and transportation of fuel; public utilities, and common carrying. In 1921 the

Kansas Court ordered the Charles Wolff Packing Company, a small Kansas meat-packing corporation, on the ground of emergency, to increase the wages paid to their men over the scale to which the wages had lately been reduced. The Supreme Court of the State upheld the ruling of the Industrial Court, holding that the evidence showed a sufficient emergency, and the Packing Company appealed to the Supreme Court of the United States, citing the Fourteenth Amendment.

Chief Justice Taft, in giving judgment, pointed out that the necessary postulate of the Industrial Court Act is that the State as representing the people, may compel producers in certain lines, whether employers or employed, to continue in their business, on terms fixed by an agency of the State if they cannot agree. The act "curtails the right of the employer on the one hand, and of the employee on the other, to contract about his affairs." While it is true that there is no such thing under the constitution as absolute freedom of contract, the restraints imposed by authority must not be arbitrary or unreasonable. "Freedom is the general rule and restraint the exception." Three classes of business, the Court stated, may be said to be "clothed with a public interest": (1) Those which are carried on under authority of a charter or grant of privileges which either expressly or impliedly imposes the affirmative duty of rendering a public service demanded by any member of the public; such are the railroads and public utilities; (2) certain exceptional occupations, such as inns, cabs and grist mills; (3) businesses which though not public at their inception may be fairly said to have risen to be such and have become subject in consequence to some governmental regulation. In these the owner, by devoting his business to the public use, in effect grants the public an interest in that use and subjects himself to public regulation to the

extent of that interest, although the property continues to belong to its private owner and to be entitled to protection accordingly.

In a sense the public is concerned about all lawful business because it contributes to the prosperity and well-being of the people, but the expression "clothed with a public interest" means more than that the public is affected by continuity or by the price at which a commodity is sold or a service rendered. "It has never been supposed, since the adoption of the Constitution, that the business of the butcher, the baker, the tailor, the wood chopper, the mining operator or the miner was clothed with such a public interest that the price of his product or his wages could be fixed by regulation. It is true that in the days of the early common law an omnipotent parliament did regulate prices and wages as it chose, and occasionally a colonial legislature sought to exercise the same power; but nowadays one does not devote one's property or business to the public use or clothe it with a public interest merely because one makes commodities for, and sells to, the public in the common callings of which those mentioned above are instances." To say that a business is clothed with a public interest is not to determine what regulation may be permissible in view of the private rights of the owner; it is not to import that the public may take over its entire management and run it at the expense of the owner.

"If the common callings", the Chief Justice said, "are clothed with a public interest by a mere legislative declaration, which necessarily authorizes full and comprehensive regulation within legislative discretion, there must be a revolution in the relation of government to general business. This will be 'running the public interest argument into the ground'."

The avowed object of regulation under the Industrial Courts Act being

continuity of food, clothing and fuel supply, an even more drastic control is involved over the employee than the employer. Such control may be justified "only where the obligation to the public is direct, clear and mandatory, and arises as a contractual condition, express or implied, of entering the business either as owner or worker... The power of the legislature to compel continuity in a business can only arise where the obligation of the continued service by the owner and its employees is direct and is assured when the business is entered upon... Not so

the owner when by mere changed conditions his business becomes clothed with a public interest. He may stop at will whether the business be losing or profitable. The minutely detailed government supervision, including that of their relations to their employees, to which the railroads of the country have been gradually subjected by Congress through its power over interstate commerce, furnishes no precedent for regulation of the business in the present case, whose classification as public is at the least doubtful."

---

### HEALTH AND THE WORKERS.

**A**N article entitled "Health and the Workers" by Dr. René Sand, Secretary-General of the League of Red Cross Societies, Geneva, appeared in the April, 1923, issue of the *International Labour Review* published by the International Labour Office, Geneva.

In this article the author stresses the importance of health propaganda work in industry and mentions the contributions which can be made by the community, the employers, and the workers respectively. Health experts, he says, have tried to estimate the relative contribution of the community and of the individual in the prevention of disease; the result is given as 20 per cent for the community and 80 per cent for the individual. While it is obvious that these figures are only a rough approximation it is none the less true that the power of the state to fix periods of quarantine, supervise the purity of the water and milk supply, regulate or prohibit the use of industrial poisons and alcoholic drinks, and promote housing schemes, has its complement in the duty of the individual to order his own way of life so as to escape the evils caused by unsuitable food, lack of air and exercise, and neglect of cleanliness. It follows, therefore, that widespread

education in hygiene is a fundamental necessity of the moment.

Certain defects are noted in the conduct of such propaganda which have often been observable and which have retarded the effectiveness of the work attempted. In the first place, health lectures, leaflets and posters according to the writer, have as a rule been far too theoretic and pedantic, and completely out of touch with the needs and mentality of the workers. Here, as in most social and international problems, it is a question of psychology; the profoundest learning and the best intentions will achieve nothing without insight and understanding. However, considerable progress has been made during the last twenty years and an entirely new conception of popular health education has been developed, the purpose of which is to spread a knowledge of the principles of hygiene and to show how the practice of it can be made attractive. The educational problems in this field call for the collaboration of health experts, psychologists, artists, writers, publishers, cinema operators, publicity agents. Again, no teaching, he says, can be wholly imposed from outside; the learner, besides contributing goodwill, must also take an active

personal share in the lesson. In order to be fully effective, the teaching should be supported by a recognized moral authority, such as the Red Cross, which is a democratic organisation with a wide popular membership, voluntarily associated for a humanitarian end. Attempts towards education and health are incompatible with extreme poverty. Experience has shown that when the material condition of the workers is improved, a corresponding improvement takes place in general health conditions.

Lack of co-ordination of the various efforts made is given as having been another cause of failure of health propaganda. A new factor has now come on the scene. The various societies which formed the League of Red Cross Societies in 1919 committed themselves

to a peace-time programme with the primary aim of improving public health throughout the world. This aim was to be accomplished by propaganda on a large scale, by the work of health visitors in homes, and not least by the Junior Red Cross. Since 1920, the Swedish Anti-Tuberculosis League has been co-operating with the trade unions. The foundations for a wider co-operation in health education between the Red Cross and employers' and workers' organisations were laid at the Third International Labour Conference in October-November 1921 in speeches by Sir Claude Hill, Director-General of the League of Red Cross Societies and by Dr. René Sand. An account is given of a number of instances of successful work along these lines, which has been initiated in many different countries.

---

### UNEMPLOYMENT INSURANCE BY INDUSTRIES.

**A** REPORT on Unemployment Insurance by industries prepared by the British Ministry of Labour has recently been issued (London: H. M. Stationery Office. Cmd. 1613, Price 9d). The report contains a brief account of the unemployment insurance acts which have hitherto been in force in Great Britain with a more complete statement of the provisions of the Unemployment Insurance Act, 1920, relating to special schemes, mainly contained in Section 18 of the act; an account of action taken to give effect to this section and steps taken to examine the possibility of developing unemployment insurance by industries.

The first unemployment insurance scheme was embodied in Part II of the National Insurance Act, 1911, which established insurance against unemployment for a limited number of industries, covering about 2,500,000 people. The Act, 1916, added other trades with about 1,250,000 workers. These acts required all insured workpeople and their em-

ployers to contribute at a flat rate, to a central fund, which would be supplemented at a fixed rate by the Exchequer; and they provided during unemployment a flat rate of benefit governed by uniform conditions. The only difference made in contribution and benefits was that there were different rates for those over or under eighteen year of age.

The act of 1920 applied compulsory insurance against unemployment to practically all industries outside agriculture and domestic service, bringing under it nearly 12,000,000 workpeople, but at the same time it allowed industries to form special schemes of their own and so contract out of the general scheme. It was stipulated that the benefits under a special scheme must be not less favourable on the whole than the benefits provided under the general scheme. On account of the abnormal amount of unemployment which arose in the autumn of 1920 and has since continued, an embargo was placed in 1921 on new

special schemes until the deficiency under the general scheme had been extinguished. Although the time for submitting special schemes had been extended from November, 1920, to June, 1921, only one special scheme, that of the insurance industry, was established before the embargo was placed on them. One other scheme, that of the banking industry, had been submitted to the Minister of Labour but not put into operation. The delay in submitting special unemployment insurance schemes was attributed partly to the unemployment situation and partly to the novelty of unemployment insurance, especially of independent schemes administered by the industries themselves. During 1920 and in the early months of 1921, the question of forming special schemes was being examined by many Joint Industrial Councils, Trade boards, and associations of employers and employed, and numerous inquiries were made of the Ministry of Labour. In working out a special unemployment insurance scheme by industries however, many difficulties were disclosed. These were mainly in regard to the grouping of occupations and the area to be covered in any special scheme. In connection with a scheme projected by the Joint Industrial Council for the iron and steel wire manufacturing industry it appeared that some establishments manufactured their own steel rods while others bought them from steel companies, and again some made the wire into finished articles which were commonly manufactured in plants outside the wire industry. The question was whether men engaged in rod rolling or in the manufacture of articles should be insured under a special scheme limited to establishments manufacturing wire although such men normally belonged to other industries. In the hosiery trade there was a question whether the area to be

included under a special scheme should comprise four counties or five; and as to the line of demarkation between hosiery manufacturing and hosiery finishing. In some cases owing to the absence of data there was difficulty in fixing the rate of unemployment to be taken as a basis for working out the finances of a scheme. No decisions had been reached on these questions at the time the embargo on new special schemes was put into effect.

On February 22, 1922, Dr. Macnamara, Minister of Labour at the time, sent a circular letter to representative bodies of employers and workers, in order to ascertain their views on the subject, but comparatively few replies were received, and those that were received indicated a wide diversity of opinion and lent support to the view that no great extension of unemployment insurance along industrial lines could be looked for on the present basis. An informal committee was then set up to explore the whole problem under the chairmanship of Sir Montague Barlow, the present Minister of Labour. Last November the Minister issued a memorandum to the National Confederation of Employers' Organisations and to the Trade Union Congress General Council, requesting their views on the questions contained therein. It is understood that these bodies are taking steps to ascertain the views of their members.

Appendices to the report contain (1) the text of Sections 18-21 of the Unemployment Insurance Act, 1920, and of the Sixth Schedule to that Act, (2) An outline of the special scheme for the insurance industry and the text of the regulations governing it, (3) a summary of certain reports and proposals upon the question of unemployment insurance by industries.

## UNEMPLOYMENT INSURANCE IN AUSTRALIA.

---

**L**AST October the parliament of Queensland, Australia, passed a law entitled "The Unemployment Workers' Insurance Act of 1922," which came into effect by proclamation on March 1.

The law provides for the establishment of an unemployment council composed of the Minister of the Crown in charge of the administration of the Act who is chairman, the Registrar of Friendly Societies, the Director of Labour, a workers' representative elected by the executives of the registered industrial unions, and an employers' representative elected by the executives of employers' organizations. It will be the duty of the Council to obtain all available information as to the condition of the labour market, and it may inquire into the causes and extent of unemployment within the State, consider the most effective measures for dealing with unemployment and report to the Governor in Council upon all matters relating to unemployment and the labour market and state labour exchanges.

Provision is made for the creation of an unemployment insurance fund to be formed by contributions from employers and adult workers who are parties to awards or industrial wage agreements, and from the State; employers, workers and the State each contributing one third. The workers' contributions are to be paid by the employer who may deduct the amount from the wages. On failure to pay the amount of contribution the minister may enforce payment before a police magistrate with an additional one-tenth by way of penalty but in case of hardship the Council may remit the whole or part of a contribution.

Upon report of the Council that any employers are failing to begin or proceed with works, which might reason-

ably be begun or proceeded with, and unemployment is likely to be caused by such failure, the Governor in Council may order such employers to take such measures as may be effective for reducing or eliminating unemployment, but an appeal against such order may be made to an industrial magistrate. An order-in-council may also be passed directing local authorities and other local governing bodies to carry on certain works for the relief of unemployment, or local authorities may be ordered to postpone works until the slack season.

The law authorizes the establishment by order-in-council of a labour farm where men will be admitted who are normally unemployable and unable to support themselves. The Council may make rules as to the rate of wages to be paid to workers at a labour farm, and as to the general management of the farm.

Regulations may be made by order-in-council fixing rates of contribution to the fund, exemptions, methods of assessment and payment, fees and allowances to members of the Council, and prescribing forms of returns and statistics. The regulations, which were gazetted on February 10, provide that every employer coming under the Act shall contribute to the fund threepence per week with respect to each employee over eighteen years of age, and shall deduct a like sum weekly from the wages of each such worker, and pay the deduction to the fund. Every employer is required to keep a roll of employees showing the name of each person in his employ each week and the amount of wages paid each one weekly. On payment of the wages shown on the roll, the employer is required to fix to the roll a stamp or stamps to be obtained from the Director of Labour or

authorized labour agents, representing the contribution to the fund due by the employer. Stamps representing the amounts deducted from employees' wages for the fund must be affixed to employees' cards. A card for each employee must be obtained from the Director of Labour for this purpose.

In cases where employees are paid wages or salary fortnightly, monthly or less frequently, the regulations will apply as if these payments were weekly but the amount of the contributions each pay day will be increased proportionately to the number of weeks between payments.

When an employee is discharged or leaves his employment he will be entitled to receive from his employer his stamped card which he shall deliver either to his next employer or to the Director of Labour on applying for sustenance from the employment fund. Unemployed workers may receive passes on government railways to any place of prospective employment at the

discretion of any labour agent or of the Director of Labour, when authorized by the Minister. Labour agents at certain centres are authorized to distribute sustenance allowances. Applications for sustenance allowances will be lodged with the labour agents, and the distributing agents shall determine the granting of the application or refer the matter to the Director. The Minister may authorize the Director to determine all matters relating to the granting of sustenance allowance, or to refer any such matters in connection with which any doubt or dispute arises to the Council for decision.

The Council may exempt any class or classes of persons from the operation of the Act, if such persons are entitled to rights in a superannuation fund in connection with their industry, and are not subject to dismissal except for misconduct or unfitness, or if the terms of their engagement make it unnecessary that they should be insured under this Act.

## ORGANIZATION IN INDUSTRY, COMMERCE AND THE PROFESSIONS.

THE Second Report on Organization in Industry, Commerce and the Professions has been issued by the Department of Labour. The volume contains much information concerning classes of associations of which particulars are frequently sought, many of the organizations named being very important bodies in the trade and commerce of the Dominion. The associations the chief objects of which are briefly stated, are arranged in twenty sub-divisions as follows:

- I. Manufacturing.
- II. Building and Construction.
- III. Mining.
- IV. Transportation.
- V. Printing Trades.
- VI. Laundering and Cleaning.
- VII. Personal Service and Amusement.
- VIII. General Manufacturers and Employers.

- IX. Financial.
- X. Agriculture.
- XI. Dairying.
- XII. Horse, Live Stock, Sheep Breeders, etc.
- XIII. Co-operative Societies.
- XIV. Wholesale Dealers.
- XV. Retail Dealers.
- XVI. Real Estate Dealers.
- XVII. Professional.
- XVIII. Technical and Scientific.
- XIX. Insurance.
- XX. Funeral Service.

The report states that while in the main the fundamentals of the several associations comprising the above-mentioned groups are naturally the advancement of the common interests of the bodies thus associated, in some instances their functions include the promotion of legislation. In a synopsis of the report it is pointed out that the first eight

divisions enumerated above embrace associations whose memberships are mainly concerned with industries where the employment of labour is an important factor, and in some of these working agreements are negotiated between the organized employers and the corresponding union of workpeople. In the remaining groups the employment of help in some instances is only incidental, and with the exception of the retail trade there is no general corresponding body of organized employees. Although a number of the associations discussed in the report are in affiliation with kindred bodies in the United States, the bulk are wholly Canadian, the Dominion and provincial association meeting annually in some Canadian city, the local bodies at more

frequent intervals. The report indicates that there are organizations covering almost every aspect of Canadian activities and gives the numerical standing, where such was obtainable, of the respective associations, as well as the combined membership of the several groups. According to the figures presented, there are in the Dominion 635 main associations of the classes listed in the report, an increase of 215 over the number mentioned in the first volume; the branch associations of the purely Canadian and international bodies number 391, an increase of 52, the aggregate reported membership of all being 743,447, as against 525,423 members for the 420 main and 339 branch associations recorded in the previous report.

---

### THE EMPLOYMENT SITUATION DURING APRIL, 1923, AS REPORTED BY EMPLOYERS.

AS anticipated in last issue, employment during April showed marked revival from the losses recorded at the close of March, the recovery being supplemented by general improvement in manufacturing and in construction and the other outdoor industries. The increases as the end of April, according to returns table tabulated by the Dominion Bureau of Statistics, provided work for approximately 32,000 workers. These gains were considerably more extensive than those recorded the corresponding month of last year and the general situation was much more favourable than at that time.

The accompanying chart shows the curve of employment as reported by employers each month from 1921 until the close of April. It will be seen that the movement has been generally upward during 1923, in spite of the large losses reported at the end of March, which were mainly attributable to the temporary shutdowns over Easter. The level of employment is not, however, as high as before the winter contraction of in-

dustry set in and caused considerable losses during November and December. The tendency so far this year repeats that indicated during the first four months of last year, although conditions have been much better than at that time. It is anticipated that continued expansion during the next few months will cause the curve to rise to a point higher than at any period of 1922; it may be remarked that the index number of employment at the close of April already exceeds that indicated at any period of 1921.

An aggregate working force of 752,037 persons was reported by the 5,820 firms making returns, who had employed 720,270 workers at the close of March. The index number reflecting this gain stood at 91.4 as compared with 87.6 at the end of the preceding month and with 83.3 and 84.1 on April 30, 1922, and 1921, respectively. Over 75 per cent of the increase occurred in the manufacturing industries, where the iron and steel division, in particular, afforded greatly increased employment. In

addition, construction was very much more active as would be expected at the season and improvement was also indicated in transportation, trade and communication. Heavy seasonal declines were recorded in logging and coal mines employed a smaller number of workers.

Improvement on a large scale was indicated in all provinces except the Maritimes during April. The gain in Quebec and Ontario of over 22,000 persons or 4 per cent was the largest in actual numbers, though the percentage expansion in the Prairie Provinces and British Columbia was somewhat greater. Manufacturing, construction and transportation absorbed the majority of the additionally employed workers. The only severe declines in Quebec, Ontario and the Prairie Provinces were recorded in bush operations while, on the other hand, activity in British Columbian logging camps was on a higher level. In that pro-

to staffs in manufacturing were largely offset by declines in mining and logging and also in transportation, due to the closing of the winter ports. The level of employment in all provinces was considerably higher than in April, 1922, and 1921, as may be seen from the accompanying table of index numbers.

Five of the six cities for which separate tabulations are made recorded increased employment as compared with March, additions to staffs being registered in Montreal, Toronto, Hamilton, Ottawa and Vancouver, while in Winnipeg the tendency was unfavourable. Statements were compiled from 729 firms in Montreal employing 101,893 persons as compared with 95,568 workers in March. The greater part of this increase of 6.6 per cent was recorded in iron and steel, due to the resumption of operations in railway car shops. Several other branches of the manufacturing industry reported increased employment although boot, shoe and garment factories were slacker. Building contractors were decidedly busier and a favourable movement was also evidenced on street railways and cartage, on telephones and in trade. The expansion in Toronto was somewhat less pronounced, the 822 firms making returns having added 1,672 persons to their staffs. As they employed 98,387 workers as compared with 96,715 at the close of March, this represented a gain of 1.7 per cent.

District	Relative weight	Apr. 30 1923	Mar. 31 1923	Apr. 30 1922	Apr. 30 1921
Maritime Provinces...	8.9	90.0	90.5	83.0	87.5
Quebec and Ontario..	69.8	91.1	87.3	82.0	82.6
Prairie Provinces.....	12.8	90.4	83.5	85.4	86.8
British Columbia.....	8.5	97.5	92.8	91.3	90.1
Canada .....	100	91.4	87.6	83.3	84.1

vince and Alberta decreases were recorded in coal mining. The losses in the Maritime district were slight; additions

Biscuit, meatpacking, iron, steel, printing, publishing, gas and glass factories reported greater activity, but leather and garment plants showed some curtailment. The employment afforded on street railways and in building construction increased considerably. General improvement was indicated at Ottawa; sawmills and paper factories recorded expansion as did several other manufacturing industries, while construction also absorbed a larger number of workers. The 128 Ottawa firms making returns reported an aggregate payroll of 9,953 persons or 514 more than at the close of March, being an increase of 5.4 per cent. The greatest improvement in Hamilton was registered in knitting, garment and cotton factories and in sheet metal, railway car and other iron and steel industries, Tobacco works were busier, and the employment afforded by building contractors increased. Returns were tabulated from 200 employers in Hamilton, whose staffs included 28,182 persons as compared with 26,913 workers in the last report, the difference indicating a 4.7 per cent increase. Varying conditions were shown in Winnipeg; losses in printing and publishing and on street railways rather more than offset gains in building construction, trade and in several other divisions. A combined payroll of 24,778 persons was indicated by the 301 concerns making returns which had employed 24,812 workers in March. Moderate increases in a number of industries contributed to the expansion of 3.8 per cent in Vancouver. Sawmills, sugar refineries and construction in particular afforded increased employment. The firms making returns, 222 in number, reported a total working force of 19,911 persons as compared with 19,174 in the preceding month. The following table gives the index numbers of employment as at April 30 and March 31, 1923, and April 30 of last year. The column headed "relative weight" shows the proportion of employees reported in these cities to the

total number of employees reported in Canada for the period being surveyed.

City	Relative weight	Apr. 30 1923	Mar. 31 1923	Apr. 30 1922
Montreal .....	13.5	88.8	83.3	82.1
Toronto .....	13.1	88.1	86.7	84.9
Ottawa .....	1.3	94.8	90.6	.....
Hamilton .....	3.7	92.6	88.4	.....
Winnipeg .....	3.3	86.3	85.7	88.6
Vancouver .....	2.6	91.8	86.9	95.4

#### The Manufacturing Industries.

The additions to staffs recorded in this division during April were considerably larger than the declines indicated at the close of march, when shutdowns over Easter had affected the situation to a marked degree. Statements compiled from 3,850 manufacturers showed a total working force of 447,040 persons as compared with 422,553 in March. Approximately half of this increase of 5.8 per cent was reported in the iron and steel group, in which the resumption of activity in the railway car shops, which had been closed at the end of the preceding month, together with improvement in various other sections, caused employment to be in much greater volume. Sawmills, textile, fish and meat preserving, pulp, paper, clay, glass, stone, biscuit, gas smelting, refining, roofing, electric current, electrical appliance, tobacco and chemical works also reported larger staffs than at the close of March. The only declines recorded in manufacturing were in boot, shoe and leather factories. The expansion registered during April was very much more pronounced than in the same month of last year and the index number stood approximately 10 points higher than in 1922 and also than in 1921, when the tendency had been downward.

**ANIMAL PRODUCTS—EDIBLE.**—For the first time since the end of August, the trend of employment in this division was favourable. The commencement of seasonal operations in lobster and fish canneries in the Maritime Provinces and in salmon canneries in British Columbia, together with gains in dairies, abattoirs and meat-packing houses in Ontario, caused employment to increase by over 11 per cent. The working forces of the 179 firms making returns included 12,994 persons as compared with 11,683 in March. Additions on a somewhat smaller scale had been reported during April, 1922, but the index number then was rather higher than for the month being surveyed.

**LEATHER PRODUCTS.**—Continued curtailment was indicated in boot, shoe, tanning and currying factories, mainly in Quebec and Ontario, although the tendency in all provinces was unfavourable. According to reports tabulated from 206 firms, they employed 17,450 persons or 812 less than at the close of March. This decline of 4.4 per cent caused the index number to be very slightly lower than during the corresponding period of last year, when contractions, though on a smaller scale, had also been recorded.

**LUMBER AND ITS PRODUCTS.**—Further expansion was shown in this industry during April, 3,751 persons having been added to the staffs of the 695 concerns reporting. As they employed 47,003 persons as compared with 32,252 workers in the last report, this indicated an increase of 8.7 per cent. Saw and lumber mills were decidedly busier, and container, furniture and vehicle works also recorded improvement. All provinces shared in the expansion which, however, was especially heavy in Ontario. This gain was much smaller than during April 1922, in spite of the more pronounced activity experienced by the logging industry during the past season. The index number during the period under review was however higher than at that time.

**PLANT PRODUCTS—EDIBLE.**—The upward movement indicated in this industry since the beginning of the year, except for a temporary check in March, was resumed in April, when there was a 3.9 per cent increase in employment. Biscuit factories, in particular, showed substantial recovery and canneries, sugar refineries, starch and glucose plants were busier also. The production of chocolate and cocoa products, on the other hand declined. Practically 80 per cent of the net increase was recorded in Ontario; improvement was indicated in British Columbia, but activity in the Prairie Provinces showed a moderate decrease. Statements were tabulated from 294 manufacturers, employing 24,401 persons as compared with a staff of 23,495 employees on March 31. The tendency during April, 1922, had been unfavourable and the situation then was not so good as for the period being surveyed.

**PULP AND PAPER PRODUCTS.**—Considerable revival was recorded in the pulp and paper group during April. Manufacturers of pulp and paper reported greatly increased payrolls, and paper product factories also were busier, but printing and publishing shops were rather slacker. The improvement was largely centered in Quebec, although there was also increased activity in Ontario and British Columbia. In the Prairie Provinces declines were registered. According to reports from 458 firms employing 52,007 persons there was an increase of 1,791 workers or 3.6 per cent in their payrolls. This increase caused the index number for the first time since the beginning of 1921 to be higher than in the base week; it was several points above the level indicated during April 1922 and 1921.

**TEXTILE PRODUCTS.**—The trend of employment in textiles, largely owing to the resumption of operations in factories temporarily closed down over Easter, was favourable, 1,130 persons having been added to the working forces of the 576 employers reporting. As their payrolls comprised 73,076 workers as

compared with 71,946 on March 31, this was an expansion of 1.6 per cent. Ontario concerns absorbed practically all the additionally employed workers; moderate improvement was indicated in the Maritime district, while elsewhere slight curtailment was registered. Thread, yarn, cloth, hosiery, knitting, carpet and cordage factories reported the bulk of the increase. Garment and personal furnishings works, on the other hand, were decidedly slacker, being affected by the depression usually indicated in the spring. Activity in the textile industries as a whole had declined during April of last year, when employment was in less volume.

**TOBACCO, DISTILLED AND MALT LIQUORS.**—Returns were received from 99 manufacturers in this division employing 10,677 persons or 533 more than in their last report. This increase of 5.3 per cent, which took place chiefly in Quebec and Ontario, was rather larger than the combined declines registered during February and March, but it was considerably smaller than the increase indicated during April, 1922, when the index number had stood slightly higher. The expansion during April of this year was reported chiefly in tobacco factories.

**CHEMICALS AND ALLIED PRODUCTS.**—The production of explosives, fireworks, drugs, medicines, soap and organic acids increased during April, mainly in Ontario. A total working force of 7,055 persons was reported by the 114 firms making returns, who had employed 6,797 workers at the close of March. This increase of 3.8 per cent caused the index number to be several points higher than in April, 1922, when the tendency had also been upward.

**CLAY, GLASS AND STONE PRODUCTS.**—General activity was evidenced in this industry during April, brick, tile, glass, stone and other works within the division showing considerably larger staffs than in March. Increases were registered in all provinces, those in Quebec and

Ontario being the largest. Statements were tabulated from 117 manufacturers with an aggregate payroll of 9,583 persons as compared with 8,542 in the last report, and increase of 12.2 per cent. Expansion though on a somewhat smaller scale had been indicated during the corresponding period of last year, when employment was in lesser volume than during the period being reviewed.

**ELECTRIC CURRENT.**—Further improvement was recorded by manufacturers of electric current, mainly in Quebec. The reports indicate that the 84 producers making returns had enlarged their payrolls by 205 persons, the working force including 10,334 workers as compared with 10,129 at the close of March. The increase of 2 per cent caused the index number to be rather higher than in April of last year, when a slightly upward trend had also been evidenced.

**ELECTRICAL APPARATUS.**—The progressive movement indicated in this industry practically without exception since the end of June of last year, was continued during April. A total payroll of 8,211 persons was shown by the 33 manufacturers making returns, who had employed 8,012 workers in March. This increase of 2.5 per cent was confined to Quebec and Ontario. The situation was decidedly more favourable than during April, 1922, when a downward tendency had been in evidence.

**IRON AND STEEL.**—The increases reported during April were a good deal larger than the declines indicated during March; in addition to the reopening of the railway car shops temporarily closed down during the last few days of March, there was improvement in the crude, rolled, forged, general plant machinery, shipbuilding, fabrication, tool and sheet metal divisions and in foundries and machine shops. Automobile manufacturers also recorded considerably increased activity. The expansion was general throughout the country, although the largest actual

gain occurred in Quebec. Reports were compiled from 644 employers, whose staffs aggregated 131,850 persons as compared with 119,142 workers on March 31, an increase of 10.7 per cent. The decline registered on that date had involved the release of 6.2 per cent of the payroll. Employment during April of last year had shown curtailment, chiefly owing to shutdowns over Easter and the index number then was almost 23 points lower than in this spring.

**NON-FERROUS METAL PRODUCTS.**—The upward movement indicated in this industry during the first three months of the year continued during April. Nickel, copper, silver and cobalt refineries and reduction plants in Ontario afforded considerably more employment and the production of tin cans and brass, bronze and copper articles also increased. One hundred and six manufacturers in this division reported a combined working force of 11,849 persons, an increase of 414 or 3.6 per cent over their March staffs. The trend in April of last year had also been favourable, but the index number then was very much smaller than for the period being surveyed.

**MINERAL PRODUCTS.**—Further general improvement was shown in this industry during April, when additions to staffs were reported in gas, coke, cyanamide and petroleum factories, chiefly in Ontario and Quebec. The working force of the 72 firms making returns aggregated 9,255 persons as compared with 8,598 in March. The difference represented an increase of 7.6 per cent. Expansion on a rather larger scale was in evidence during April, 1922, but the volume of employment at that time was smaller than in April of this year.

**MISCELLANEOUS MANUFACTURING INDUSTRIES.**—Reports were tabulated from 67 concerns in this division, whose staffs totalled 4,378 persons as compared with 4,159 at the close of March. The greater part of this gain of 5.3 per cent occurred in roofing factories in Quebec.

### Logging

Further considerable losses on the whole were reported in logging camps during April, in spite of some increases in Quebec and British Columbia, those in the former province being to river driving operations. Ontario firms recorded heavy contractions and the tendency in the Maritime and Prairie Province was decidedly unfavourable. The payrolls of the 200 firms making returns declined from 21,227 persons on March 31 to 17,786 at the close of April, a shrinkage of 16.2 per cent. Marked improvement had been registered during April of last year, but in spite of that the level of employment then was rather lower than for the period being surveyed.

### Mining

**COAL MINING.**—A continuation of the downward movement evidenced since the end of January was apparent during April when 1,123 men were released from the staffs of the 94 operators making returns. Their payrolls comprised 28,734 persons as compared with 29,857 in March. The Maritime and Prairie Provinces and British Columbia shared in this contraction of 3.8 per cent. Losses affecting a somewhat smaller number of men had been reported during April of last year, but employment then was in about the same volume as in the month being discussed.

**METALLIC ORES.**—Gold, nickel and copper mining in Ontario absorbed a larger number of workers and minor increases in activity were also indicated in British Columbia mines. Statements were received from 45 concerns employing 10,200 persons on April 30; this was 228 persons or 2.3 per cent more than in the preceding month. Additions to staffs of practically the same size had been indicated during April, 1922, but conditions then were decidedly worse than for the period being surveyed.

**NON-METALLIC MINERALS OTHER THAN COAL.**—General activity was shown in

the various divisions of this industry, asbestos, salt and stone quarrying in Quebec and Ontario employing larger working forces than for some time. According to reports from 64 firms, 5,806 persons were employed in the group during April as against 5,292 in the preceding month. There was therefore an increase of 514 men or 9.7 per cent. The improvement recorded during April of last year had been somewhat more pronounced but the level of employment then was lower.

#### Communication

The upward movement indicated in the communication industry during the two months preceding continued during April, when 373 persons were added to the staffs of the 170 concerns making returns. Their payrolls included 20,624 persons as compared with 20,251 in the last report. The majority of these additionally employed workers were absorbed on telephones in Quebec. The movement is seasonal in character, repeating that experienced during the same period of last year.

#### Transportation

**STREET AND ELECTRIC RAILWAYS AND CARTAGE.**—For the first time since the end of September improvement was recorded by street railways, the staffs of the 106 concerns making returns having been enlarged by 745 persons. As they employed 18,852 workers as compared with a staff of 18,107 at the close of March, this was an increase of 4.1 per cent, the greater part of which occurred in Quebec and Ontario. The expansion registered during April of last year was a good deal more extensive and the index number then stood several points higher.

**STEAM RAILWAYS.**—The volume of employment afforded on steam railway operations showed a substantial increase during March, there being general improvement throughout the country. Reports were tabulated from 118 concerns and divisional superintendents employing 74,010 persons in comparison

with a total payroll of 73,339 in the preceding month. Varying conditions contributed to this net increase; in the Maritime Provinces and Quebec declines were recorded, but in Ontario and the Prairie Provinces there were large additions to payrolls. Contractions had been indicated during April of last year and the situation then was not so favourable as for the period under review.

**SHIPPING AND STEVEDORING.**—The commencement of seasonal activity mainly in Ontario, caused fairly big increases in employment in this division, which, however, were largely offset by contractions in the Maritime Provinces where the closing of the winter ports affected the situation considerably. A working force of 10,080 persons was reported by the 53 concerns making returns, whose staffs had included 9,945 workers in March, the difference indicating an increase of 1.4 per cent. The tendency during the corresponding month of last year, when employment was in greater volume than for the period being surveyed, had also been upward.

#### Construction and Maintenance.

**HIGHWAY CONSTRUCTION.**—Further improvement was shown in this industry during April, when 378 men were added to the staffs of the 37 concerns reporting. Their payrolls totalled 2,335 persons, an increase of 19.3 per cent over the total for March. Highways in Ontario absorbed practically all the additionally employed workers. The index number was higher than during April of last year, although additions to staffs on a slightly larger scale had been indicated then.

**BUILDING CONSTRUCTION.**—Seasonal activity in building projects resulted in greatly increased employment throughout the country, especially in Quebec and Ontario. Returns were received from 293 contractors employing 15,040 persons, as compared with 13,016 at the close of March. This increase of 15.6 per cent was somewhat smaller than

that recorded during April of last year, when employment had been in somewhat greater volume than for the period under review.

**RAILWAY CONSTRUCTION AND MAINTENANCE.**—The commencement of spring and summer operations in extension and repair work caused the railways to enlarge their construction staffs by over 6,000 persons during April. Thirty concerns and divisional superintendents registered a combined working force of 34,531 persons as against 28,503 in the last report. Over half of this increase of 21 per cent took place in the Prairie Provinces, while activity in Ontario also increased largely and there were lesser gains in Quebec and British Columbia. In the Maritime district declines were recorded. The expansion shown during April of the preceding year had provided work for a slightly larger number of workers. Nevertheless the level of employment at that time was lower.

#### Services.

**HOTELS AND RESTAURANTS.**—General improvement was reported in this industry during April: the increases in Ontario and Quebec were rather larger than elsewhere. Statements were tabulated from 73 hotels and restaurants employing 6,092 persons as compared with 5,928 workers in the preceding month. The difference represented an increase of 2.8 per cent, which caused the index number to be slightly higher than in April, 1922.

#### Trade.

Renewed activity was apparent in the employment afforded in this industry during April, improvement being recorded in both retail and wholesale establishments. A combined sales force of 54,920 persons was reported by the 582 firms making returns, who had employed 54,392 persons in March. The greater part of this increase of one per cent was registered in retail stores in the Prairie Provinces and Ontario. Expansion on a slightly larger scale had been

indicated during April, 1922, when employment was in very slightly smaller volume than for the period under discussion.

The table on page 654 gives the index numbers of employment in the various industries as on April 30 and March 31,

1923, and April 30, 1922 and 1921. The first column shows the proportion of employees in each industrial group in relation to the total number of workers in all groups for the month under review. (Number of workers employed on January 17, 1920, equals 100).

### EMPLOYMENT OFFICE REPORTS FOR APRIL, 1923.

THE decline in employment reported during the latter part of March (due partly to the approach of the Easter holidays) was followed by a marked expansion during April, 1923, according to the returns from the offices of the Employment Service of Canada in various provinces. A comparison with the month of April, 1922, shows an increase during this year in applications and vacancies while approximately the same volume of placements were made. A glance at the accompanying chart which shows the returns from the offices on the basis of daily averages over half month periods, will show that the rise of vacancies continued steadily, crossing the curve of applications during the latter half of the month, demand exceeding supply for the first time since the harvest period last fall. The curve of placements also rose steadily throughout the month. The summary of the reports from the offices indicates that the average number of registrations daily at the offices was 1,769 during the first half of April as compared with 1,337 daily during the previous period and 1,554 during the same period a year ago. During the latter half of the month applications averaged 1,894 daily as compared with 1,889 during the same period in 1922. Vacancies reported by employers averaged 1,604 and 1,903 daily during the first and second half of the month, respectively, as compared with 1,392 and 1,796 daily during the same periods last year. Vacancies during the preceding period averaged 1,138 daily. The offices effected an

average of 1,263 placements daily during the first half of March as compared with an average of 969 during the previous period and with 1,119 during the same period a year ago. During the latter half of April placements averaged 1,464 daily as compared with 1,432 during the same period in 1922. The average number of placements in regular employment during the period was 918 and 1073 daily, while placements in casual work averaged 345 and 391 daily during the first and second half of the month respectively. The following table gives placements effected to date by the offices of the Employment Service:

Year.	Placements		
	Regular	Casual	Total
1919 (10 months)....	268,001	37,904	305,905
1920.....	366,547	79,264	445,811
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923 (4 months).....	66,604	51,404	118,008

During the month of April the number of references to positions was 34,171, while a total of 32,933 placements were made. The placements in regular employment totaled 24,047, of which 20,869 were of men and 3,178 of women, while placements in casual work numbered 8,886. The number of vacancies reported to the offices was 42,393, of which 31,811 were for men and 10,582 for women. Applications for employment registered at the offices

were 44,082, of which 33,977 were from men and 10,105 from women.

Placements in regular employment by provinces were as follows: Nova Scotia, 309 men, 103 women; New Brunswick, 300 men, 61 women; Quebec, 649 men, 446 women; Ontario, 7,700 men, 889 women; Manitoba, 2,384 men, 522 women; Saskatchewan, 3,812 men, 501 women; Alberta, 2,859 men, 410 women; British Columbia, 2,856 men, 246 women.

#### MARITIME PROVINCES.

Many farm workers were in demand during the month despite the continued bad weather and placements in this group were made from New Glasgow and Moncton. Prospects were bright for employment in the construction groups, especially in road work. The work available during the period was mainly for carpenters, labourers and inside workers, for repair and alteration jobs. Logging operations were quiet during the first half of the month, with a fairly brisk demand for river drivers and sawmill men for Northern New Brunswick. At Halifax numbers

of longshore workers were employed. Difficulty was experienced in securing trained women to fill positions as maids, cooks, etc., for city and country homes.

#### QUEBEC.

The demand for farm labour was very brisk, the increase being reflected in the reports from all offices. Activities in the building and construction groups showed a marked advance with many new projects under way. Manufacturing industries continued active, especially the metal trades, and the office at Montreal had available many orders for skilled factory labourers.

#### ONTARIO.

The improvement in the employment situation in province of Ontario may be attributed to the increased demand for farm workers, especially in the vicinity of Toronto, Niagara and the Western Peninsula. The offices at Chatham, Oshawa, Hamilton, and London, reported a surplus of orders. Activities in the building industries showed continued delays in all localities, although a

definite advance was reported in positions available. Bricklayers, plasterers, painters and construction labourers, were called for at Guelph, Kitchener, London, North Bay, Sault Ste. Marie, Toronto and Windsor, while at Belleville a shortage of skilled workers was anticipated in the near future. At Windsor the supply of carpenters was in excess of the demand. Extensive orders for section men and extra gang workers for steam and electric railway construction were received at Fort William, Toronto and Timmins. At North Bay rock drillers and graders were required for railway extension work. The demand in the logging industry was on the decline, bush work having almost ceased, while the number of river drivers asked for was not large. The calls were felt mainly at Timmins, Sault Ste. Marie, Port Arthur and Pembroke, and the offices reported no difficulty in securing men. In the manufacturing industries a further augmentation in demand was felt, especially in the lumber yards and saw mills at North Bay and Pembroke, and in the iron and steel industries at Chatham, Sarnia, Peterboro, Toronto and Windsor. The textile trade required numbers of women workers for knitting and weaving mills and also boys and girls as learners in the trade. At Kitchener men were in demand for the rubber tire factories. A promise of revival in the mining industry was reported from Cobalt and district and orders for a number of shaft sinkers and miners were received. Opportunities for employment of women clerical workers were not good, but experienced household help of all kinds was required in large numbers.

#### MANITOBA.

Agricultural work has absorbed a large part of the surplus labour and workers have been placed from all offices on farms in Manitoba and Saskatchewan. A noteworthy feature of the situation is the apparent shortage of farm help in the Prairie Provinces.

With the advent of more favourable weather, opportunities for employment in the construction groups became more numerous. Repairs and alterations to houses, bridge building and railway maintenance work afforded the chief employment, especially at Winnipeg and Portage la Prairie. From Winnipeg a few loggers were placed chiefly for the spring cut at Ontario points, but on the whole the group showed a decline. There was a predominating demand for domestic workers for farms with an increase also in the number of calls in the city. Placements of day workers continued to form a large part of the business of the women's division.

#### SASKATCHEWAN.

A further increase in the calls for farm labour was reported but the supply of experienced workmen, although greatly increased, is not yet sufficient to meet the requirements. It is thought that the peak of the spring demand has been reached, however, and the offices will be enabled to fill future orders easily. While the building industry has not expanded rapidly, the outlook for the spring and summer is encouraging. At Moose Jaw and Saskatoon, carpenters were required for building in the city and also for elevator repair work in outlying districts. Ground men, bridge builders, section men and grade workers were required in large numbers at Moose Jaw, North Battleford, Regina, Saskatoon and Swift Current. The logging season was about over and only a few placements were made in this group. A strong demand for women workers was reported at Regina and Saskatoon, the number of experienced housekeepers and maids for country work being insufficient to meet the demand.

#### ALBERTA.

Seeding was well under way during the month, and men were placed on farms in considerable numbers from Calgary, Drumheller, Lethbridge and

\*107 placements effected by offices since closed.

Medicine Hat. Several men transferred in from British Columbia were placed at various points. Prospects were fair for employment in the building trades. At Lethbridge and Edmonton calls for bricklayers, lathers and painters were filled, while road work and irrigation projects created a demand near Calgary and Lethbridge. Men for extra gangs, section workers and steel track layers were placed with the railway companies in large numbers from all the offices. The demand was not so brisk in the logging group but from Edmonton placements of bushmen and saw mill men were made.

#### BRITISH COLUMBIA.

Calls for farm workers were not so numerous though several placements were made in this group, and from Vancouver and Victoria men were transferred to points in Alberta and Saskatchewan. At Victoria, a slight shortage of workers for farms was reported. Increased activities were shown in the construction group and sufficient building was in progress to employ a majority of the workers. At New Westminster and Prince Rupert labourers were required for wharf building and drydock repairs. Extension of roads near Revelstoke created work for a number of men, but near Vancouver all provincial road work was completed. A demand for carpenters was felt generally, although at Victoria there was a number registered as unemployed. Irrigation work at Vernon found jobs for many, while city sewer work, railway, bridge and track repairs, called for workers at New Westminster, Kamloops and Revelstoke. Some activities were shown in logging, but the seasonal downward trend had commenced. The allied trades, however, such as lumbering and saw mills were busy, and many vacancies were filled in Cranbrook, New Westminster, Vancouver and Victoria. Quarry workers and miners for quartz and metal mining were required at New Westminster and

Prince Rupert. An increased number of orders for institutional help was reported at Vancouver and Victoria with approximately the same demand for household workers. Day workers and cleaners were placed without difficulty.

#### The Movement of Labour.

The offices of the Employment Service of Canada made 24,047 placements in regular employment, of which 15,008 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter, 2,296 were granted the Employment Service reduced transportation rate, 1,703 going to points within the same province as the despatching office and 593 to points in other provinces.

The transfers from Quebec offices, which involved the issuing of special rate certificates were 30 in number, all bushmen, 20 from Hull to North Bay and Pembroke, Ont., 9 from Montreal to Sault Ste. Marie, and 1 from Montreal to a point within the zone. Ontario offices granted 427 vouchers of transportation, of which 2 were farm workers going from Fort William to Winnipeg and Moose Jaw; 1, a farm worker, from Port Arthur to Winnipeg and 1 a building construction labourer from Port Arthur to Brandon. From the offices at Fort William, Ottawa, Pembroke, Port Arthur and Sudbury, about 130 bushmen and mill hands were sent to the lumber camps. Farm workers were transferred to various points within the province from North Bay, Sault Ste. Marie, Sudbury and Toronto, while bricklayers, carpenters, steamfitters and building and railway construction labourers were sent from Port Arthur, Sault Ste. Marie, Toronto and Ottawa to various points. From Manitoba offices 831 persons were sent to employment at outside points, 232 of whom were going to points in Saskatchewan, 95 to Ontario, 2 to British Columbia, and 502 to points within the province. The two workers going from

Winnipeg to British Columbia were machine miners for Vancouver. To the province of Saskatchewan the Winnipeg office sent 135 farm workers, 1 blacksmith, 3 cooks, 1 waitress and 1 maid, while the office at The Pas sent 9 farm workers. To Ontario points, 3 railway construction labourers were sent from The Pas; from Winnipeg 33 station men were sent to Timmins, 3 pit labourers, 43 river men and bush workers to Port Arthur, and crane men, labourers, and women workers to various other points. The majority of the provincial transfers were of farm labourers and household workers. Saskatchewan offices issued 198 certificates, of which 2 were farm workers going to Edmonton, and 2 were miners going to Vancouver, B.C. The 194 special rate vouchers granted to persons going to points within the province were mainly to farm workers, with several domestic workers, a few bushmen and river drivers, 5 teachers and 1 bricklayer. The offices in Alberta despatched 445 workers at the reduced

rate, 37 of whom were farm hands going to points near Saskatoon, North Battleford and Moose Jaw, Sask. Of the 408 transfers within the province, 198 were farm labourers, 94 were bushmen and mill hands, 31 were miners, and the remainder, carpenters, building labourers, machinists, etc. From British Columbia offices, 76 farm labourers were sent to points in Alberta, and 113 farm labourers and house workers to Saskatchewan, and 1 farm labourer to Winnipeg, Man. Of the 146 persons going to points within the province, 11 were miners going from Nelson to Vancouver and Cranbrook, about 90 were bushmen and mill labourers, and the remainder were station men, labourers, and house workers.

Of the 2,296 workers who benefited by the Employment Service reduced transportation rate, 1,198 were carried by the Canadian National-Grand Trunk Railways, 1,081 by the Canadian Pacific Railway, 6 by the Pacific Great Eastern Railway, and 11 by the Temiskaming and Northern Ontario Railway.

---

### BUILDING PERMITS ISSUED DURING APRIL, 1923.

**A** PRONOUNCED expansion in building operations during April was indicated in the monthly reports on building permits furnished by municipal officials to the Dominion Bureau of Statistics. The aggregate value of the building authorized by the 56 cities making returns stood at \$17,544,061, a total \$8,999,833 or 105.3 per cent higher than in March, when the prospective building was estimated at \$8,544,228. The value for April, moreover, exceeded that for the corresponding month of last year, \$14,047,198, by \$3,496,863, or 24.9 per cent. It was also higher by 43 and 18 per cent than in April 1921 and 1920, respectively.

Detailed reports received from 50 cities showed that they had issued permits for approximately 1,600 dwellings,

valued at \$6,821,000. As mentioned in former reports, the construction of several dwellings is very often authorized by a single permit. Over 3,100 permits for such buildings as garages, stores, factories, etc., aggregated more than \$9,549,000 in value.

As compared with the figures for March, 1923, all provinces except British Columbia recorded increases in the value of building contemplated. The gains in Quebec and Ontario of \$5,473,802, or 257 per cent, and \$2,714,876 or 55 per cent respectively, were especially pronounced.

The amount of building authorized in Quebec and Saskatchewan exceeded that reported for April, 1922, but in all other districts declines were recorded.

In Quebec there was an increase of \$4,980,657 or 190 per cent, and in Saskatchewan of \$90,694 or 29 per cent. Of the reductions in the remaining provinces that in Manitoba of \$891,389 or 64.6 per cent was the largest.

Montreal, with permits valued at \$6,616,757, reported very much more prospective building than any other centre, the total being 130 per cent higher than in March, 1923, and 125 per cent above that for April, 1922. Toronto and Winnipeg registered rather larger values of permits granted than in the preceding month, but less than in April of last year. At Vancouver there were declines in both comparisons. Of the smaller centres, Quebec, Three Rivers, Westmount, Kingston, Port Arthur, St. Catharines, Regina

and Victoria reported increases in the building authorized as compared with the preceding month and with the same month of 1922.

An analysis of the returns from the 35 cities for which records are available since 1910 shows that the total for the month under review was higher than in April of any of those years except 1912 and 1913, being substantially larger than in recent years in spite of the fact that there have been considerable declines in building costs since peak prices were reached in 1920

The following table shows the value of the building permits issued during April as compared with March, 1923 and April, 1922, the 35 cities originally used being marked by asterisks.

## FAIR WAGE CONTRACTS, MAY 1923.

**D**URING May, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to one fair wage contract which was awarded by the Department of Public Works. This contract contains the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to the supplies ordered by the Post Office Department, subject to the regulations for the Suppression of the Sweating System and the securing of fair wages, ect.

### DEPARTMENT OF PUBLIC WORKS.

Dredging at the pier of Acadia Coal Company, Pictou Harbour, N.S. Name

of contractor, Glasgow Dredging Company, Queensport, N.S. Date of contract, March 12, 1923. Amount of contract, Class "B" 70 cents per cubic yard (scow measure).

### POST OFFICE DEPARTMENT.

The following is a statement of payments made in May for supplies ordered by the Post Office Department subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
Making metal dating stamps and type, and other hand stamps and brass crown seals	\$633.59
Making and repairing rubber stamps, daters, etc.....	141.84
Making up and supplying letter carriers' uniforms, etc.....	12,505.86
Supplying mail bag fittings.....	7,283.65
Repairing scales.....	88.95
Repairing boxes and hampers, etc.....	135.95
Supplying ink.....	120.00

## FAIR WAGES ON PROVINCIAL PUBLIC WORKS IN MANITOBA.

**T**HE Minister of Public Works of Manitoba, acting under the authority of the Manitoba Fair Wage Act of 1916, has approved the following schedules of rates of wages and maximum number of working hours in connection with the execution of provincial public works, the schedules to be in

effect from June 1, 1923 until April 30, 1924, or until another order may be made by the Minister. The first schedule relates to the City of Winnipeg and a radius of thirty miles around it, and the second to the rest of the Province.

# FAIR WAGE SCHEDULE FOR WINNIPEG

The following schedule shall apply to the City of Winnipeg and a radius of thirty miles therefrom, effective from the First day of June, 1923; to the Thirtieth day of April, 1924:—

	Rate per Hour	Hours per week
1. Labourers—		
(a) Skilled—Comprising the following:—Unloading, Piling and Handling Face Brick, Cut Stone, Architectural Terra Cotta, Marble (real or imitation), Roofing Slate, Plaster Castings, Ornamental Bronze and Iron, Interior Joinery, Laying Drain Tiles, Mixing Concrete by Machinery, Puddling Concrete in Forms or Levelling in Slabs, Bending and Placing Reinforcing Material, Movable Scaffolding and Runways.....	.50	50
(b) Unskilled. Comprising all labour other than the occupations above defined or elsewhere provided for in this Schedule.....	.42½	54
2. Teamsters .....	.50	60
3. Bricklayers .....	1.10	44
(a) (Subject to all the conditions contained in a certain agreement dated June 17th, 1922, between the General Contractors' Section of the Winnipeg Builders' Exchange and the Bricklayers' and Masons' International Union of Manitoba, No. 1.)		
(b) Helpers—		
1. Mixing and Tempering Mortar .....	.55	50
2. Attending Bricklayers on or at Scaffold.....	.50	50
4. Stonemasons .....	1.10	44
(a) (Subject to all the conditions contained in a certain agreement dated June 17th, 1922, between the General Contractors' Section of the Winnipeg Builders' Exchange and the Bricklayers' and Masons' International Union of Manitoba, No. 1.)		
(b) Helpers—		
1. Mixing and Tempering Mortar .....	.55	50
2. Attending Stonemasons on or at Scaffold.....	.50	50
5. Cement Finishers.....	.70	50
6. Marble Setters.....	1.05	44
(a) (Subject to all the conditions contained in a certain agreement dated June 17th, 1922, by and between the Winnipeg Builders' Exchange, Marble Section, and the Bricklayers' and Masons' International Union of America, Local No. 1, Winnipeg.)		
(b) Helpers .....	.55	50

	Rate per Hour	Hours per week
7. (a) Mosaic and Tile Setters....	1.00	44
(b) Helpers .....	.55	50
8. Terrazzo Workers—		
(a) Layers .....	.72½	44
(b) Helpers .....	.55	50
9. Stonecutters—		
(a) Carvers .....	1.07½	44
(b) Journeymen .....	.95	44
10. (a) Plasterers .....	1.07½	44
(b) Helpers .....	.55	50
11. Wood, Wire and Metal Lathers .....	.80	44
12. (a) Plumbers .....	.90	44
(b) Helpers .....	.50	50
13. (a) Steamfitters .....	.90	44
(b) Helpers .....	.50	50
14. Operating Engineers on Construction—		
(a) Engineers in charge of machines of three or more drums .....	1.00	50
(b) Engineers in charge of double drum machines....	.90	50
(c) Engineers in charge of single drum machines.....	.85	50
(d) Firemen .....	.60	50
15. Sheet Metal Workers.....	.80	44
16. Painters, Decorators, Paperhangers and Glaziers.....	.75	44
17. Blacksmiths .....	.75	44
18. Electrical Workers, Inside Wiremen—		
(a) Licensed Journeymen.....	.85	44
(b) Journeymen working under permit .....	.77½	44
(c) Experienced Helper.....	.65	44
(d) Helper .....	.45	44
19. Bridge and Structural Steel and Iron Workers.....	.90	44
20. Asbestos Workers—		
(a) Journeymen .....	.80	44
(b) First Class Improvers.....	.70	44
21. Asphalters—		
(a) Finishers .....	.65	44
(b) Men engaged preparing, mixing and heating materials .....	.50	50
22. Carpenters .....	.85	44
(a) (Subject to all the conditions contained in a certain agreement dated June 17th, 1922, by and between the General Contractors' Section, Winnipeg Builders' Exchange, and the United Brotherhood of Carpenters and Joiners of America District Council, Winnipeg, Man., Locals No. 343 and No. 2655.)		
(b) Helpers .....	.50	50

# FAIR WAGE SCHEDULE FOR THE PROVINCE OF MANITOBA

(Exclusive of Winnipeg)

The following schedule shall apply to any portion of the Province of Manitoba, other than the City of Winnipeg and a radius of thirty miles therefrom, effective from the First day of June, 1923, until the Thirtieth day of April, 1924:—

	Rate per Hour	Hours per week		Rate per Hour	Hours per week
1. Labourers—			7. (a) Mosaic and Tile Setters....	1.09	44
(a) Skilled. Comprising the following:—Unloading, Piling and Handling Face Brick, Cut Stone, Architectural Terra Cotta, Marble (real or imitation), Roofing Slate, Plaster Castings, Ornamental Bronze and Iron, Interior Joinery, Laying Drain Tiles, Mixing Concrete by Machinery, Puddling Concrete in Forms or Leveling in Slabs, Bending and Placing Reinforcing Material, Movable Scaffolding and Runaways.....	.45	50	(b) Helpers .....	.50	50
(b) Unskilled. Comprising all labour other than the occupations above defined or elsewhere provided for in this Schedule.....	.35	54	8. Terrazzo Workers—		
2. Teamsters .....	.45	60	(a) Layers .....	.72½	44
3. Bricklayers .....	1.10	44	(b) Helpers .....	.55	50
(a) (Subject to all the conditions contained in a certain agreement dated June 17th, 1922, between the General Contractors' Section of the Winnipeg Builders' Exchange and the Bricklayers' and Masons' International Union of Manitoba, No. 1.)			9. Stonecutters—

			(b) Helpers .....	.45	50

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

---

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction

**HALIFAX, N.S.—LOCAL EMPLOYERS AND THE BRICKLAYERS' UNION.**—Agreement to be in effect from May 1, 1923, to May 1, 1924.

Wages per hour, 90 cents.

**HULL, QUE.—CONTRACTING PLUMBERS OF HULL, AND THE SYNDICATE OF PLUMBERS AND STEAM-FITTERS.**—Agreement to be in effect from May 4, 1923, to May 4, 1924, with three months' notice of termination from either party.

Members of the Syndicate to be given preference of employment over members of the International Union.

Lockouts originating in other trades and sympathetic strikes are absolutely forbidden.

Hours of labour, from May 1 to November 1, 49 and 50 per week, 9 hours a day with 4 or 5 hours on Saturday. Master plumbers not to work

9 hours per day for contractors who operate under an 8-hour day. Hours of labour from November 1 to May 1, 44 per week, 8 per day except Saturday. Overtime, until midnight including Saturday afternoons, double time. After midnight and holidays, double time. Catholic workmen not to be obliged to work on holy days.

Wages per hour, plumbers and steam-fitters, 1st class, 75 cents; 2nd class, 65 cents.

The question of apprenticeship to be studied by a special committee to be formed on May 1, of not less than three or more than five members of each side.

A permit joint committee to be formed to settle disputes.

Men to be paid at the shop in the employer's time whether the work is by contract or not.

**MONTREAL, QUE.—OPERATIVE PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL 33, AND CERTAIN INDIVIDUAL CONTRACTORS.**—Agreement to be in effect from May 1, 1923, until May 1, 1924.

Hours per day, eight for five days, and four on Saturdays. No work on Saturday afternoon except under a permit from the business agent.

Wages per hour, \$1.00. Overtime, Sundays and holidays, double time.

Employers not to be entitled to more than two apprentices. No apprentice to begin his service in the trade during term of agreement.

Plasterers on out of town work to receive transportation, board expenses and wages when travelling between 8 a.m. and 5 p.m.

Either party to give three months' notice of change in agreement.

Any delegate, officer or business agent of the union on union business to have access to work during working hours.

BRANTFORD, ONT. — GENERAL CONTRACTORS AND BUILDERS, AND THE DISTRICT COUNCIL OF CARPENTERS—Agreement to be in effect from May 1, 1923, to April 30, 1924, with thirty days' notice of change.

Hours of labour: eight per day for five days and four on Saturdays.

Minimum rate per hour, 80 cents.

Overtime work and work on specified holidays, time and one-half; such work to be done only by sanction of the carpenters' secretary.

Employers to employ union carpenters only, except in event of the secretary being unable to supply same.

A board of conciliation to be appointed of two from each side, with an additional member chosen by them, to settle disputes.

When work is by shift, second and third shifts to be straight time. Man working on more than one shift in the twenty-four hours to be paid overtime.

WINDSOR, ONT. — MASTER PLUMBERS' ASSOCIATION AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, No. 552. Agreement to be in effect from May 1, 1923, for one year, with thirty days' notice of change, and for an additional year if no notice be given.

Hours per day, eight; Saturdays, four. Overtime, Saturday afternoons, Sundays and all legal holidays, double time. The first hour after closing time to be straight time, but this privilege only in case of necessity. Travelling time, single time up to 10 p.m.; if at night a sleeper to be provided.

Any man superintending work requiring three or more men, 10 cents extra per hour.

Men working out of town to be provided with transportation and board.

Plumbers not to do steamfitting when steamfitters are available. Wages per hour, \$1.10.

#### Manufacturing: Printing and Publishing

REGINA, SASK.—LEADER PUBLISHING COMPANY AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, No. 205 — Agreement as summarized in the LABOUR GAZETTE for September, 1922, pp. 1005-1006, extended for two years, from May 1, 1923, until May 1, 1925.

#### Transportation and Public Utilities

STREETS RAILWAYS.—The Lethbridge Municipal Street Railway Schedule is given under "Service" in this article. The schedules for the municipal street railways in Saskatoon, Saskatchewan and Calgary, Alberta, are given in the special articles on civic agreements.

#### Service: Public and Municipal

MEDICINE HAT, ALBERTA.—THE CITY COUNCIL AND CIVIC EMPLOYEES' FEDERAL LABOUR UNION, No. 46.—Agreement to be in effect from January 1, 1923, until December 31, 1923.

City Council to appoint a committee upon proper notice being given, to receive a grievance committee from the union. No discrimination against employees for being connected with a trade union. Heads of departments not to use their position to solicit donations from employees. Pay days to be twice monthly.

All employees except those employed by hour or day to be paid for specified public holidays. Wages not exceeding one month to be paid for sickness after six months' employ. Union members appointed delegates to conventions to be granted leave of absence to attend

same without pay. In cases of vacancy senior men to be given preference of promotion, if efficient.

Outside labour to work eight hours per day; two weeks' holidays with pay each year after twelve months' service to all except men employed by the hour or day; overtime to men employed by hour or day, time and one-half.

In taking on employees, former employees who are returned soldiers to be given preference if efficient, and after them, other former employees. Questions arising regarding hours, pay or conditions to be settled by the Council with a committee of the Civic Union.

#### A.—CITY TREASURER'S DEPARTMENT.

Hours of work, 8.30 a.m. to 5.30 p.m., with 1¼ hours for lunch, five days a week. Saturdays, 8.30 a.m. till noon. Cashier's cage to be closed at 4.30 p.m. five days a week, and at noon on Saturday.

Temporary men to be paid at the rate of \$100 per month, or \$4.50 per day.

Permanent staff to be granted 14 days leave of absence each year with pay, after one year's service.

#### B.—CITY POLICE DEPARTMENT.

Hours per day, eight; six days per week.

Clothing and equipment to be supplied as specified, on April 1 and October 1 each year. Uniforms to be handed in on resignation.

After one year's service, leave with pay to be granted each year as follows: constables, fourteen days, sergeants and detectives, eighteen days.

All ranks to be granted pay, less compensation, on account of sickness or injuries through accident resulting from employment, not exceeding 60 days.

Wages per month, constables, \$125, \$115 and \$107, sergeants and detectives \$135 and \$140.

#### C.—POUND DEPARTMENT.

Equipment to be supplied as at present. Two weeks holiday each year with pay after one year's service.

#### D.—PUBLIC WORKS AND ENGINEER'S DEPARTMENT.

Hours per day, eight, excepting ten for teamsters.

#### E.—SANITARY DEPARTMENT.

Hours per day, eight; overtime for hourly or daily men, time and one-half. Two weeks' leave of absence with pay after one year's service.

Wages: per month—night soil men, \$120; scavengers, \$115.

#### F.—GAS DEPARTMENT.

Hours per day, eight. Wages: per month, pipe fitters and lamp repairers, \$120; per day, labourers, \$4.

#### G.—PARKS DEPARTMENT.

Hours per day, eight. Wages per day, labourers, \$4.

LETHBRIDGE, ALTA. — CITY OF LETHBRIDGE AND THE LETHBRIDGE CIVIC EMPLOYEES' FEDERAL UNION No. 70. — Schedules and conditions of employment to be effective from January 1, 1923, until December 31, 1923.

When failing to settle disputes parties to refer same to a conciliation board.

Group sickness and accident insurance to be retained.

Leave of absence without pay to be granted to delegates or committees.

City commissioners at all times to receive a grievance committee. No discrimination against employees on account of connection with a trade

organization. Heads of Departments not to use their position to solicit donations from employees. Hourly employees to be paid twice monthly. Check-off system as in force to be maintained. Seniority and efficiency to be generally recognized. Hours per day, eight, except where otherwise specified. Overtime to hourly men, time and one-half. No overtime allowance to monthly men.

It is agreed that wage adjustments shall be "based on the cost of living as indicated by the *Labour Gazette* of the just past October in each year, and that parties hereto shall meet on November 30, 1923, or as soon thereafter as possible to discuss and arrive at a basis for a future agreement." Questions as to whether further adjustments shall be applied on a flat percentage basis or in the ratio of increases given between 1914 and 1920 shall be open to discussion.

**POWER HOUSE EMPLOYEES.** — Men working six days per week to be paid time and one-half for all overtime.

Wages per hour for conveyormen and oilers, 58 7/10 cents.

Present allowance of coal to power house employees is abolished; hereafter total coal value is to be divided by the total hours worked by power house employees and divided proportionally as an hourly increase.

**WATER WORKS EMPLOYEES.** — Wage schedule to be adjusted as above by the cost of living. Men to receive one

hour's pay if requested to report when services are not required for the day. Overtime, time and one half. Suitable boots to be furnished to men working in water.

**STREET RAILWAY DEPARTMENT.** — Wages to be adjusted by cost of living. Overtime after midnight and all day on Sunday, time and one-half. Preference for overtime to be given by seniority. Preference in vacancies in regular shift to be given to the senior man whose day off occurs on that day. If senior men are not available, spare man to work longer than a regular shift, provided he be allowed a reasonable time off for meals and not required to work longer than six hours at a stretch without time for a meal.

**OTHER DEPARTMENTS.** — Wages to be adjusted by cost of living. Engine drivers: employees to be paid engineers' wages when on engines or on mechanical work. Overtime, time and one half. Parks and boulevards, garbage department and street department: men to receive one hour's pay if asked to report if services for day are not required. Blacksmith: time and one half for overtime. Stables department: One hours pay when asked to report if services for day are not required; hours, eight on the streets, with half an hour additional night and morning for teamsters if required to groom team.

All departments to be paid double time for all "overtime" on Sunday.

## WAGES AND WORKING CONDITIONS OF CIVIC EMPLOYEES AT SASKATOON.

**T**HE schedules of rates of pay and working conditions for various classes of municipal employees of the city of Saskatoon, Saskatchewan, to be effective to January 1, 1924, retroactive to January 1, 1923, were established under by-laws passed on May 7, 1923, after negotiations between the organizations of the municipal employees affected and the civic authorities, a committee of the council appointed early in the year having recommended as a basis for the schedule a reduction of three per cent. As a protest against this reduction, three electric linemen quit their work, and the city replaced them.

The main features of the schedules are as follows:—

### Pumping Plant and Electrical Departments.

#### A. OUTSIDE ELECTRICAL WORKERS.

Hours per day: eight and one-half for five days; four and one-half on Saturdays. Special hours for wiring inspector, and arc and tungsten patrolmen.

Overtime after working regular hours, time and one-half until 10 p.m.; and from 10 p.m. to 8 a.m., after 5.30 p.m. on Saturdays and on specified holidays, double time.

Workers having charge of four or more journeymen or twelve or more labourers to be deemed sub-foremen, provided they have had at least three years' experience. Not more than one apprentice to two journeymen. Apprentices not to be allowed to work on high voltage wires or on primaries. The electrical engineer or line foremen may dismiss any worker without notice when his work is completed or if he proves unsatisfactory. In filling any vacancy seniority of service to be given preference.

Minimum wages: per hour — sub line foremen, 91.8 cents; leading lineman, 88.7 cents; lineman, 86.2 cents; wireman electrician, 76.0 cents; arc patrolman, meter installers, 70.2 cents; are trimmers, 65.2 cents; tungsten patrolmen, 58.9 cents; groundsmen, 55.2 cents. Apprentice linemen, from 54.8 cents to 67.4 cents. Temporary employees to be paid union rates.

#### B. POWER HOUSE WORKERS.

Hours per day, nine for five days; four and one-half on Saturdays, except for men on shift work. Work to start and stop earlier in summer.

Overtime until 10 p.m., time and one-half, thereafter and on holidays, double time. In case of a double shift for trouble or breakdown, no overtime for first nine hours of the night shift. Workers on monthly basis not to work over eight hours except in case of breakdown. One day off in seven for men working on Sundays, or overtime pay for seventh day. In filling any vacancy, seniority of service to be given the preference. The electrical engineer may dismiss anyone without notice when the work is completed or when the worker proves unsatisfactory.

Wages: Per hour—skilled mechanic, 70.4 cents; motor mechanic, 70.4 cents; blacksmith, 65.4 cents; foreman boiler cleaner, 65.1 cents; boiler cleaners and ash men, 55.3 cents; coal handlers, 55.4 cents; spare firemen, 64.6 cents; flue blower, 55.5 cents; mechanics' helpers, 55.3 cents. Other employees paid on monthly basis. Temporary employees to be paid union rates.

Employees on monthly salaries to give reasonable notice of inability to take up duties.

#### C. PUMPING STATION WORKERS.

Monthly workers not to work over eight hours except in case of breakdown.

Sunday workers to be allowed one day in seven; or overtime for seventh day. Vacancies to be filled giving preference to seniority. Hours for hourly employees, nine per day; four and one-half on Saturdays. Work to start earlier in summer.

The city engineer may dismiss any worker without notice when work is completed or worker proves unsatisfactory.

Employees at the pumping station and filtration plant are all on monthly salaries. Temporary employees to be paid union rates. Employees to give reasonable notice of inability to perform duties. Overtime to 10 p.m. time and one-half; thereafter and holidays, double time.

#### D. ALL CLASSES.

All workers under the bylaw on a monthly basis, except chief engineers, wiring inspector, draughtsman and construction foreman,

14 days' holidays with pay each year after one year's service.

The above mentioned employees to have twenty-one days' annual leave with pay after one year's service. These employees not to have overtime pay.

Hourly employees after one year's service, one week's holiday with pay; after two years, two weeks. Those temporarily laid off to be entitled to holidays on *pro rata* basis.

Sick leave with pay for hourly employees not to exceed two weeks without sanction of the council. Before sick pay is granted certificate must be produced and case approved by a committee of electrical workers.

#### Members of the Fire Department.

Two platoon system to be carried out. Day force to work ten hours 8 a.m. to 6 p.m.; night force fourteen hours, 6 p.m. to 8 a.m. In case of a large fire entire force to be subject to call.

In case of any vacancy being filled seniority of service to be chief consideration. No fireman to be dismissed until cause for dismissal has been discussed by the chief with the grievance committee. If decision is not satisfactory matter may be referred to the city commissioner and later laid before the council. An employee resigning without giving due notice must give satisfactory reason to the chief.

After ten hours' service men may have fourteen hours' rest except in cases of emergency.

All members after one year's service to be entitled to fourteen days holidays with pay each year, and after two years' service, twenty one days.

At least one complete uniform to be issued each year to each member.

Union officials to be granted leave of absence to carry out union duties provided this does not interfere with service of the department, and twenty-four hours' notice is given.

Employees to submit requests for changes in wage schedule not later than December 1 in each year, new schedule to take effect as from January 1, following.

Wages per month: Captains, \$147.50; motor mechanic and lieutenants, \$142.50; firemen, \$117.50, \$127.50 and \$137.50.

### Municipal Street Railway

#### A. OPERATION OF ONE MAN STREET CARS.

Wages per hour, motor conductors and inspectors, from 56 cents per hour for first six months to 66 cents per hour for third year. Motor Conductors training students, 5 cents per hour above schedule. Sunday work, time and one-quarter; holidays, time and one-half.

Spare and regular men, one hour's pay for reporting when asked to do so, if a regular run is not assigned. Extra trips after regular schedule to be paid time and one-half.

A motor-conductor leaving the service shall if taken back receive former rate of pay but not seniority rights.

Motor Conductors working on snow sweeper or work car, maximum rate for time actually worked up to ten hours; thereafter, time and one-half.

A motor Conductor suspended or discharged and after investigation found not guilty, shall be reinstated and paid for time lost. No employees or officials to discriminate against any motor conductor for being or not being a union member.

Runs to be selected by seniority. Superintendent to arrange runs to conform as nearly as possible to the 8 hour day; this clause not to apply to inspectors, who shall work nine hours per day. When it is anticipated that a number of men will not be required, six months' leave of absence to be granted to as many as can be spared. One week's leave with pay to be granted after one year's service prior to May 1, and two weeks' after two years. Sick pay to be granted after one year's service, not exceeding two weeks without sanction of council, granting of pay to be approved by a committee of employees.

Provisions made for issue of uniforms. Free transportation to be granted. Provisions made for arbitration on matters in the interests of the employees or of the city. Complaints to be heard by officials, and an employee failing to get satisfaction to have right to appeal to the Mayor, Commissioner or City Council.

#### B. MECHANICAL DEPARTMENT.

Wages: per hour—linemen, 88.4 cents; line-men's helper, 77.6 cents; blacksmith, 67.5 cents; junior mechanic, 66.6 cents; skilled mechanic, 72.5 cents; pitman, general worker, 56.5 cents; car cleaner and helper 51.5 cents.

Hours of barn men, shopmen and linemen, eight per day; over-time, time and one-half. Sunday work as regular duty, time and one-

quarter. Employees to be entitled to one day's rest in seven, with double time for emergency work on seventh day. Car-barn men, shopmen and linemen, time and one-half on all public and civic holidays, this not to apply to trackmen or greasers, who shall only be allowed extra pay as determined by Superintendent.

In event of men being taken on, city reserves right to pay wages according to ability.

Usual provision for holidays and sick leave.

#### C. OFFICE STAFF.

Salaries paid by month. Clerks to perform such duties as assigned to them by the Superintendent, on Saturday afternoons, Sundays and holidays.

Twenty-one days holidays with pay each year after one year's service. No overtime pay. Provision made for sick leave.

## WAGES AND WORKING CONDITIONS OF CIVIC EMPLOYEES AT CALGARY

THE agreements in effect since 1920 between the City Commissioners of Calgary and the Calgary Federation of Civic Employees have contained a clause providing that if the wage schedule as in effect for the previous year is not renewed at the expiration of the first sixty days of any year either party may require that the matter be submitted to arbitration. In February, 1923, when the City Commissioners' proposal that the wages of certain classes of employees should be reduced was laid before the employees, the changes which involved certain reductions in wages were not accepted and it was found necessary to submit the matter to arbitration. The result was that the entire matter of civic wages and working conditions was considered by the board, a new preamble to the agreement being substituted for the one formerly in effect, and a few changes being made in wages and working conditions throughout the agreement.

The preamble to the agreement is as follows:

#### The Agreement

*Clause 1. Date Effective.* All agreements between the city of Calgary and the Calgary Federation of Civic Employees shall be effective as to wages from May 15, 1923, and as to hours and working conditions from the date of adoption by the council.

*Clause 2. Term of Agreement.* This agreement shall remain in full force and effect until the end of the present year, subject to the conditions named hereinafter in this clause.

Either party may upon one month's notice given subsequently to the 1st day of November but prior to the 31st day of December, 1923, submit a new schedule of wages and working conditions.

It is hereby agreed that for a period not to exceed thirty days from the 1st day of January, 1924, or until arbitration proceedings, if any, are completed, no change in wages or working conditions shall be made unless an agreement is arrived at before the expiration of the said thirty days and during the same period no strike or lockout shall take place.

*Clause 3. Grievance Committee.* The city commissioners shall at all times receive a grievance committee.

*Clause 4. Discrimination.* The city shall not at any time show discrimination against any of its employes because of their connection with trade organizations.

*Clause 5. Pay-Days.* That all hourly employes shall be paid on the 5th full working day after the 15th and last day of the month.

*Clause 6. Holidays.* (a) The following shall be considered legal holidays: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labor Day, Thanksgiving Day, Christmas Day.

Also one-half day will be set aside annually and declared a Civic holiday for the City Employees annual picnic.

(b) All permanent employes shall be given two weeks holiday each year after one year's service and shall be paid for same. Public holidays are not included in the two weeks.

*Clause 7. Overtime. Hourly or Monthly Employes.* (a) Time and one-quarter shall be paid for the first hour; time and one-half for the next three hours, and double time thereafter; double time for Sundays and holidays; double time for calls after 10 p.m. or emer-

agency work, and not less than two hours for any one call.

(b) Where monthly men receive overtime, it shall be calculated on the proportional rate.

(c) In the event of a man being called upon to work on his regular day off, or on a legal holiday, he shall be paid double time. In the case of men on running, double or revolving shifts, should a legal holiday occur during the regular shift, he shall be paid one-fourth of a day's pay extra, and should Sunday occur during the regular shift he shall be paid one hour's pay extra, computed on a basis of 25½ days per month, at his regular monthly salary.

(d) Running shift to mean occupation that is carried on consequently from day to day.

*Clause 8. Working Hours.* The regular working time shall be eight hours per day, 44 hours per week, except in cases of double running or revolving shifts, or when otherwise mentioned in the different agreements attached hereto.

*Clause 9. Sickness and Non-occupational Accident.* All permanent employes shall be covered from sickness and accident pay except where affected by the Workmen's Compensation act, under benefits as outlined and agreed upon in the commissioners' report of August 19, 1922, adopted by the city council on the 21st August, 1922, and in consideration of these benefits shall each contribute seventy-five cents per month toward the fund necessary to provide payments for the said benefits, the same to be deducted from their pay, the city agreeing to contribute the balance needed.

*Clause 10. Accident.* When an employe is incapacitated and unable to work caused by an accident of any kind while engaged in the city's service, he shall receive such compensation from the city which, added to the amount received from the Workmen's Compensation act, will equalize his regular wage.

In such cases the city commissioners reserve the right to terminate at any time in their discretion the benefits received under this clause.

*Clause 11. Senior Work.* When an employe is placed in a senior position for a period exceeding two days, he will receive the senior rate of pay while holding that position.

*Clause 12. Promotions.* In making promotions in any of the departments, such appointments shall be made from the staff, provided in the opinion of the city commissioners the applicants have the necessary qualifications.

Both in promotions and reductions seniority and efficiency are to be considered.

*Clause 13. Dismissals.*—Except for cause, when a permanent employe is relieved of his position, he shall be given thirty days notice, or in lieu thereof, one month's pay. Except for cause, permanent hourly employes shall receive two weeks' notice or two weeks' pay in lieu thereof.

*Clause 14.* A permanent Employe shall be one who has been in the city's service continuously for a period of at least one year. This shall not be construed to include men commencing their service with the city on new construction work or works of a temporary nature, no matter how long their period of service extends. In the event of a man who is a permanent employe of the city as defined above, being transferred to employment on new construction work, or work of a temporary nature, he shall be considered a permanent employe whilst in the service of the city.

In the event of a man other than a permanent employe being discharged or laid off duty owing to the completion of the work or the reduction of staff on the work upon which he is now engaged, his continuity of service is thereby broken even though he be re-engaged at some future time.

*Clause 15. Special Clauses.* When a specific clause in any attached agreement differs from the working of a similar clause in this preamble, the clause in the agreement shall govern the action of that particular local.

The separate agreements and schedules are summarized below.

*Street and Electric Railway Employees, Division 583.* — Wages: per hour — motormen and conductors, 1st 6 months, 55 cents; 2nd 6 months, 57½ cents; thereafter 62½ cents. Motor conductors, 1st 6 months, 57½ cents; 2nd 6 months, 62½ cents; thereafter 67½ cents. When training students, 5 cents extra per hour. Shop and barnmen: foremen, \$175, \$180 and \$185 per month; per hour — foreman carpenter, 90 cents; leading hand carpenter, 85 cents; blacksmiths, 82 cents; carpenters, 80 cents; motor and controller men, 77 cents; motor and leading hand, 82 cents; air brake and wheel lathe operators, 80 cents; painter foreman, 85 cents; painters, 75 cents; cleaners, washers and yardmen, 52 cents; truck and car repairers, 1st 6 months, 57½ cents; 2nd 6 months, 62½ cents; 3rd 6 months, 67½ cents;

armature winders, 80 cents; electric welder, track welder, 84 cents; leading hand, 5 cents per hour extra; foreman 10 cents extra.

Track Maintenance: Switch repairmen, 60 cents; trackmen, 57½ cents; greasers and switch cleaners, 52½ cents. Office staff, all paid on a monthly basis.

Men operating cars to be paid on the same basis with one hour extra for time worked on Sundays. Legal holidays, time and one-quarter; work on employee's regular day off, double time.

#### Working conditions:

##### 1.—MOTOR-CONDUCTORS AND CONDUCTORS.

The clause guaranteeing to employees four lectures a year, and the payment of \$1 per lecture for attending same has been deleted. This applies also to the barn staff.

Employees to become efficient in contents of Rule Book and to be subject to an examination thereon at any time.

Hours per day, eight. Straight time up to eight hours and thirty minutes. Not more than six hours overtime to be worked per week.

Regular runs to be completed within twelve hours. A new sign-up sheet to be posted every three months. Vacant regular runs to be filled from the list of spare men. Runs to be selected in order of seniority.

Senior men to be given preference and choice in case of holidays.

Spare men to be given preference, according to seniority, of 8 hours work per day, or as nearly as possible.

Spare men reporting and not allotted a run to be paid for 1½ hours if before 6 a.m. and one hour if after. Spare men if reporting at or before 6 a.m. and allotted a run to be paid for extra time according to length of run. Otherwise, straight time for all time worked except on legal holidays and Sundays when spare men will be paid same rate as regular men.

Uniforms to be supplied by the city, men under one year in service paying half the cost, and city paying full cost to men in service over one year.

Leave of absence up to one month in one year may be granted, and in special cases, a further period of sixty days. Sick leave may be granted up to 30 days, and in special cases additional leave up to six months.

Employees may be disciplined for misdemeanors. Employee may have the case investigated by a grievance committee of the union who may appeal to the superintendent or further to the city commissioners. If a satisfactory settlement is not reached, division 583 through the Federation shall require matter to be referred to a board of Arbitration. When employees are exonerated, payment shall be made for lost time.

##### 2.—BARN STAFF.

Hours per day, eight, for 5½ days. One hour extra to be allowed for all Sunday work.

In reduction of staff, last on to be first laid off. In filling vacancies for day work, preference to be given according to seniority and ability. Other conditions as in preamble.

##### 3.—TRACK MAINTENANCE MEN.

Hours per day, eight. Six days per week; one day off in seven, or on occasion 5½ days per week. Trackmen and switchmen, time and one-half for all Sunday work. Switch repairmen to be named by track foreman. Other conditions as in preamble.

*International Union of Steam and Operating Engineers*, No. 838.—Wages per month — engineers at hospital, \$130.20 and \$139.50; incinerator engineer, \$147.25; steam roller engineer, per hour, 85 cents. Other conditions as in preamble.

*International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers*, No. 528.—Salaries and wages: per

month — teamsters, truck drivers and stablemen, \$120; helpers, \$112; garage men, foreman mechanics, \$164; mechanic, \$144; night man, \$114.

Sundays and holidays, double time, except for men working on regular shift.

Hours of work: from March 16 to November 15, teams and trucks to leave the stable or garage at 7.45 a.m. and remain on the job until 5 p.m., or at noon on Saturdays. Horses to be cared for morning and evening. No reduction of pay for loss of time through inclement weather. Other conditions as in preamble.

*United Association of Plumbers and Steamfitters*, No. 496.—Wages to be at regular union rate. Other conditions as in preamble.

*International Association of Machinists*, No. 357.—Machinists' work, as specified, to be done by a practical machinist. Drilling and screwing machine work may be done by a specialist.

Minimum wages per hour: machinists, 82 cents; specialists, 70½ cents. Other conditions as in preamble.

*City Hospital Employees' Association*, No. 8.—The agreement and schedule includes professional and clerical classes skilled employees and unskilled help, laundry workers receiving \$15 and \$16 per week, painters and carpenters, \$139.50 per month; floor polishers and wall washers, elevator men, porters and corridor cleaners, \$110 per month, orderlies \$110-120 per month, chefs, \$139.50 and \$103.50 per month; 2nd cook, \$95; and kitchen men \$70 and maids \$45 per month, rooms and meals being provided for the last two classes.

In event of any help being required to live in or out, \$10 per month to be allowed for room rent and a reasonable allowance for board.

Two weeks' holiday with pay after one year's continuous service. An employee whose regular duties necessitate

working on a legal holiday to be given another day off.

Orderlies to be supplied with uniforms each year.

Hours per week for engineers, orderlies, etc., second cook, kitchen help and maids, 48 hours with one clear day off in seven; for plumber, painter, carpenter, floor polishers, washer, ironers, mangle hands and laundry help, 44 hours per week; office staff, 47 hours, business secretary, storekeeper, laundry foreman and chef as their duties may require.

Other conditions as in general preamble.

*Calgary Fire Fighters' Federation, Union No. 19*.—Wages: per month — Fire alarm superintendent, \$175; master of mechanics and senior captain, \$170; motor mechanic, \$165; assistant motor mechanic, \$145; captains, \$160; lieutenants, carpenters, plumbers, painters, \$145; firemen, \$115, \$125 and \$145; fire alarm operators, \$110, \$115 and \$117.50; fire chief's secretary, \$105.

Full time to be allowed and no reduction in salary for sickness resulting from the occupation of a fireman.

Hours for operators, eight per day, six days per week.

Summer and winter uniforms to be issued to employees wearing uniforms.

The agreement mentions that it is "desirable that a pension fund be created".

Free transportation on street cars to men when in uniform.

Other conditions as in preamble.

*International Brotherhood of Electrical Workers, Local No. 348*.—Wages: per day — linemen: foreman, line inspector, \$7.50; man in charge, \$7.25; journeyman lineman, \$6.75; apprentices (4 years) \$4.60; \$5.10; \$5.60; \$6.10; ground men in gangs, \$5.15.

Cablemen: foreman, \$8.25; journeyman, \$7.55; underground conduit man, \$7.50.

Station and inside wiremen: foremen, \$7.50; journeyman, \$6.75; apprentices (4 years) \$4.60; \$5.10; \$5.60; \$5.95.

Repair and testing department:

Classes and rates as above.

Maintenance and troublemen: foreman, \$7.50; journeyman, \$6.75; arc trimmer (3 years) \$4.75; \$5.15; \$5.55.

Operators per month — chief operator and plant electrician, \$178; others, \$133-163; senior operator, \$153; apprentices (3 years) \$98, \$108, \$118. Per month: meter readers, foreman, \$138; checker, \$133; meter reader (2 years) \$123, \$128.

Miscellaneous: wiring inspection: \$15 per month; armature winders, \$7 per day.

A journeyman must have had four years' experience. An apprentice to be one who has worked 3 months at the trade.

Hours of work: eight per day with four on Saturday. Eight hours in shift work, and shifts to be so arranged that there shall be 16 consecutive hours rest between. Work in this intermission other than changing shifts or relief, to be paid overtime. An agreement to shift hours to be for not less than fourteen calendar days, or shift hours to be paid at the overtime rate.

Work out of hours to be overtime except for maintenance men who may work any nine consecutive hours with one hour for lunch. Maintenance men and arc trimmers to have one half day holiday the day previous to their day off, instead of Saturday afternoon.

Overtime for hourly or monthly employees: first hour, time and one-quarter; next three hours, time and one-half, thereafter and Sundays, holidays and after 10 p.m. and emergency work, double time. Overtime to be on base of

eight hours per day for daily men and twenty-five and a half days a month for monthly men. No overtime payment to be for less than two hours.

Except for men working their regular shift, Sundays and Dominion holidays to be double time, Saturday afternoon to be time and one-half and work after 5 p.m. to be double time.

Men employed by the month to be subject to reduction for time lost.

Apprentices to serve four years at the trade. One apprentice to three journeymen except in case of inside wiremen and operators where ratio shall be one to one.

The agreement describes different kinds of work, the class each is to be done by, and the qualification necessary for certain classes of employees.

All employees are to receive at least one day off duty each week.

*Calgary Civic Employees' Association, No. 37.*—Salaries and wages: caretakers, cemetery and park: \$120.90 to \$142.10 per month; greenhouse man, \$138.90 per month. Per hour—head gardener, 65 cents; gardeners, 60 cents; permanent skilled labourers, 57½ cents; permanent unskilled labour, 52½ cents; temporary unskilled, 50 cents. Paving Department: concrete finishers, 65 cents; permanent labourers, 52½ cents. Power Department: elevator man, \$125.55 per month; ashman, coal handler and janitor, \$108.80 per month; per hour, boiler washer, 70 cents; boiler washer's helper, 57½ cents; coal trimmers or permanent labourers, 52½ cents; unskilled labourers, 50 cents. Public works department, per hour—sub-foreman, 60 cents; permanent general labourers, 52½ cents; street cleaners, 45 cents. Sewer maintenance, all classes, 57½ cents. Waterworks department: hydrant foreman, 63 cents; pipe layers, hydrant men, caulkers, metermen, 57½ cents; maintenance diggers, 52½ cents; temporary unskilled labour, 50 cents.

The agreement does not cover wages for labour employed for relief purposes during unemployment.

A permanent employee paid by the day working two or more hours in a half day and unable to continue on account of inclement weather to be paid for a full half day.

In the power house there shall be a head fireman with each shift, other employees to be classed as labourers.

Hours per week, forty-eight when two or more shifts are in operation. One month's work to consist of twenty-five and one-half days for revolving shifts.

*International Brotherhood of Blacksmiths, Drop-forgers and Helpers, No. 585.*—Minimum wage for blacksmiths, 80 cents.

A blacksmith to have served an apprenticeship or have had four years of varied experience at the trade, and be capable of operating a fire and successfully completing work within reasonable length of time.

Other conditions as in general preamble.

*City Hall Staff Association, No. 38.*—Employees all on monthly salaries.

Hours of work to be 8.45 a.m. to 5.15 p.m. 1 $\frac{1}{4}$  hours off for lunch; hours on Saturday, 8.45 a.m. to 1 p.m.

Suitable uniforms to be issued to inspectors at discretion of city commissioners.

Other conditions as in general preamble.

---

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1923.

THE movement in prices as indicated by the index number of wholesale prices continued upward during May due largely to seasonal advances in prices of fish, potatoes, apples, cattle, and sugar. The family budget in terms of retail prices at the beginning of May was lower than in April due to a seasonal fall in the prices of dairy products, especially butter.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.36 at the beginning of May as compared with \$10.64 for April; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. The total for food, fuel, and rent averaged \$20.89 for May, as compared with \$21.21 for April; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); and \$14.21 for May, 1914. In foods, butter accounted for most of the decline of 29c showing

a net fall of nearly 27c. for the three pounds included in the budget. Eggs, milk, cheese, mutton, bacon, and evaporated apples showed small declines, but advances occurred in sugar, sirloin steak, potatoes, and tea. Fuel was again slightly lower while rent advanced in a small number of cities and declined in others.

In wholesale prices the Departmental index number stood at 228.5 for May, as compared with 227.4 for April; 226.1 for May, 1922; 247.3 for May, 1921; 356.6 for May, 1920 (the peak); and 136.3 for May, 1914. In addition to the advances in fish, potatoes, apples, cattle and sugar there were also substantial increases in the prices of dressed beef, oranges, cotton fabrics, oilcloth, paint, and in raw furs, mink skins, with smaller increases in corn, hay, maple sugar, bar iron, galvanized iron sheets, and in pine lumber. The most important declines were in western grains, butter, eggs, raw cotton, coal, coke,

gasoline, coal oil, linseed oil, turpentine, raw rubber, benzine, birch, maple, and in copper wire. Compared with a year ago the groups Grains and Fodder, Animals and Meats, Fruits and Vegetables, Fuel and Lighting, House Furnishings, and Drugs and Chemicals were lower. All the other groups were higher.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices for the several commodities in relation to the average prices for the base period, 1890-1899, these being, therefore, made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

The new index number of wholesale prices in Canada calculated by the Dominion Bureau of Statistics and published in a report "Prices and Price Indexes, 1918-1922" and brought down to May, 1923, in a bulletin is described in the article following in this issue. For May this index number showed a slight decline, namely from 156.3 to 155.0, there being increases in iron products, vegetable products, wood products, but decreases in animal products, and textile products, but practically no change in non-ferrous metals and chemicals.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Department list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, declined slightly, being down to 155.3 for May, as compared with 155.9 for April; 156.2 for March; 148.6 for May, 1922; 159.5 in May, 1921; 260.5 in May, 1920 and 99.9 in

May, 1914. The decline was due chiefly to decreases in butter, coal, gasoline, linseed oil, and turpentine. Beef, cattle, potatoes, oilcloth, and paint were substantially higher.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100 stood at 155 for March as compared with 152 for February; 148 for January; and 150 for March, 1922, all of the groups being up.

The Canadian Bank of Commerce index numbers of both imports and exports were higher, the former at 167.92 for mid-May as compared with 167.05 for mid-April and the latter at 153.83 for May as compared with 152.57 for April. The combined index of both imports and exports advanced to 160.87 for May as compared with 159.81 for April.

Professor Michell's index number of wholesale prices in Canada, based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, advanced to 179.1 for May as compared with 176.2 for April; 160.9 for May, 1922; 270.2 for May, 1920; and 115.1 for May, 1914. Both foods and Manufacturers' goods advanced.

The table of retail prices and rentals shows the prices at the beginning of May of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for **six-roomed** houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city etc. The prices

of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being

the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA.

products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices.

Sirloin steak advanced from an average of 27.3c per pound in April to 28c in May. In all provinces the prices averaged higher, except Nova Scotia where it was slightly lower. Round steak was up from 22.4c per pound to 22.9c. Rib roast advanced from 20.7c per pound in the average to 21.2c. Shoulder roast showed little change, advances in some localities being offset by declines in others. Veal was steady. Mutton was down slightly in the average from 28.1c per pound in April to 27.6c in May. Nova Scotia and Manitoba, however, averaged slightly higher. Fresh and salt pork were steady while bacon declined slightly to an average of 31.9c per pound. Boiled ham was down in the average from 59.2c per pound to 58.8c. In fresh fish, cod and halibut were slightly lower while whitefish advanced. Salt herrings were up from 12.9c per pound to 13.8c while salt cod was slightly lower at 20.8c per pound. Lard was steady.

Eggs continued to decline, averaging 33.4c per dozen in May as compared with 36.3c in April and 53.3c in March. Nearly all localities were lower. Cooking eggs also were down to an average of 30.6 per dozen in May as compared with 31.7 in April and 41.9c in March. The declines were general. Milk was lower in Three Rivers, Sherbrooke, Sorel, St. Hyacinthe, and Calgary. Other localities were reported to be unchanged. Dairy butter was down from an average of 48.3c in April to 40.1c in May. The decline was general.

Creamery butter showed about the same general decline as dairy, averaging 44.4c per pound in May as compared with 55.3c in April. Cheese was down from 35.8c per pound in April to 34.6 in May.

Bread, soda biscuits, and flour were steady. Tapioca averaged slightly higher at 13.2c per pound. Canned vegetables were unchanged. Potatoes advanced from an average of \$1.21 per 90 pounds in April to \$1.29 in May. The increase was general in all provinces. Evaporated apples and prunes were slightly lower. Raspberry jam and canned peaches showed little change. Granulated sugar was up from 12c per pound in the average in April to 12.8c in May. All provinces showed an increase. Yellow sugar showed about the same changes as granulated. Tea was slightly higher. Cream of tartar fell from an average of 70.5c per pound to 67.5c. Laundry starch was steady.

Anthracite coal averaged \$17.83 per ton in May as compared with \$18.52 in April. Declines of from 50c to \$2.00 occurred in Halifax, Three Rivers, Sherbrooke, Sorel, St. Hyacinthe, St. John's, Thetford Mines, Montreal, Brockville, Peterborough, St. Catharines, Brantford, Galt, Woodstock, Stratford, London, and St. Thomas. Bituminous coal fell from an average of \$11.87 per ton in April to \$11.59 in May. Hard wood, four feet long, declined slightly from an average of \$12.79 in April to \$12.72 in May. Soft wood also was slightly lower at \$9.45 per cord in May as compared with \$9.52 in April. Coal oil was steady.

Rent was slightly higher, increases occurring in Quebec, St. John's, and Montreal.

#### Wholesale Prices.

GRAINS AND FODDER.—Wheat No. 1 Manitoba Northern, at Winnipeg, declined from \$1.21 per bushel toward the end of April to \$1.14 per bushel toward the end of May, while Ontario winter wheat at Toronto advanced from

\$1.22 per bushel in April to \$1.27 in May. Western barley declined from 58c per bushel in April to 52c by the end of May. Oats at Winnipeg fell from 51c per bushel the last week in April to 45c the last week in May. Corn at Toronto advanced from 99c per bushel toward the end of April to \$1.01 about the middle of May and then declined to 96c. Flaxseed fell from \$2.93 per bushel in April to \$2.34 by the end of May. Hay at Montreal advanced from \$14 per ton to \$15 and at Toronto from 14.50 per ton to \$15.50. Baled straw at Toronto was 50c per ton higher at \$9.50. Bran and shorts were steady.

**ANIMALS AND MEATS.**—Western cattle at Winnipeg advanced from \$7 per hundred pounds about the end of April to \$7.50 toward the end of May. Butcher cattle at Toronto also advanced from \$7.50 per hundred pounds the last week in April to \$8.00 the last week in May. Beef, dressed hindquarters, advanced from \$16.50 per hundred pounds to \$20 and forequarters from \$9 per hundred pounds to \$10. Dressed hogs were steady. Sheep declined from \$9 per hundred pounds to \$7.50.

**DAIRY PRODUCTS.**—Butter remained steady at the lower levels reached toward the end of April. Cheese fell from 18c per pound to 16½c. Fresh eggs remained steady at the levels reached at the end of April.

**FISH.**—No improvement was reported in the demand for cod as the markets in Europe were said to be overstocked. Business in pickled fish and in smoked fish continued very dull. Some improvement was noted however, in the demand for lobsters and good catches were reported. Fresh salmon trout and white-fish were quoted at 25c-26c per pound.

**FRUITS AND VEGETABLES.**—Apples, No. 1 Spies, advanced from \$9 per barrel to \$11. Oranges were up from \$6 per box to \$7. Evaporated apples declined from 13½c per pound to 11c. Currants were

slightly higher at 18½c per pound. Potatoes at Montreal advanced 20c per 90 pounds reaching \$1.30, and at Toronto the advance was 15c per 90 pounds to \$1.45. Tapioca was slightly higher at 10½c per pound. Flour was steady. Granulated sugar advanced from \$10.99 per hundred pounds about the middle of April to \$11.74 early in May and then declined to \$11.09 about the middle of May. Barbados molasses was slightly higher at 88c per gallon. Maple sugar advanced from 21c per pound to 24c.

**TEXTILES.**—Ontario unwashed wool was quoted at 17c-27 per pound. Raw cotton declined from 28.75c per pound to 26.20c while cotton fabrics advanced from an average of 84.52c per pound to 87.02c. Raw silk was slightly lower at \$9.05 per pound while machine silk advanced 75c per pound to \$19.75. Hessians were down slightly at 12.49c per yard. Table oilcloth advanced from \$4.20 per piece to \$4.56.

**HIDES, LEATHER, BOOTS AND SHOES.**—No changes were reported.

**METALS AND IMPLEMENTS.**—Bar iron rose from \$3.75 per hundred pounds to \$3.90. Galvanized sheets were up from \$6.80 per hundred pounds to \$7.30. Wrought iron scrap declined from \$18 per ton to \$17. Steel billets were slightly higher at \$44.15-\$56.00 per ton. Nickel advanced from 30c per pound to 31c while quicksilver declined \$1 per 75 pound flask to \$68. Axes were slightly higher.

**FUEL AND LIGHTING.**—Bituminous coal at Montreal declined 40c per ton to \$6.50 and anthracite coal 50c per ton to \$13.75. Connellsville coke at the ovens fell from \$6.00-\$6.60 per ton to \$5.00-\$5.25. Gasoline was 4c per gallon lower at 25c. Coal oil declined 3c per gallon to 18c.

**BUILDING MATERIALS.**—Pine, No. 1 cuts and better, advanced \$5 per M, reaching \$155-\$165. Red oak was up

(\*) Preliminary figures. (†) Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

from \$140 per M to \$145, while birch and maple each declined \$5 per M, being down to \$50. Flooring at Victoria fell from \$65 per M, to \$60. Iron pipe advanced from \$13.26 per hundred feet to \$13.77. Copper wire was slightly lower at 19c per pound. Barbed wire advanced from \$4.10 per hundred pounds to \$4.55. Linseed oil declined from \$1.38 per gallon to \$1.23, and turpentine from \$2.30 per gallon to

\$1.95. Benzine fell 4c per gallon to 25c. Prepared paints were down from \$3.85-\$4.20 per gallon to \$4.10-\$4.45.

HOUSE FURNISHINGS. — No changes were reported.

DRUGS AND CHEMICALS. — Alum advanced from  $3\frac{1}{4}$ c per pound to  $3\frac{1}{2}$ c.

MISCELLANEOUS. — In raw furs, mink advanced from \$7.50-\$12.50 each to \$7.50-\$14.00. Raw rubber at New York fell from  $27\frac{3}{4}$ c per pound to  $24\frac{1}{2}$ c.

## PRICES AND PRICE INDEXES 1918-1922.

### The New Index Number of Wholesale Prices in Canada Constructed by the Dominion Bureau of Statistics.

THE Dominion Bureau of Statistics, in the Department of Trade and Commerce, has issued a report entitled "Prices and Price Indexes 1918-1922", which is a continuation of the series issued from 1910 to 1917 by the Department of Labour on wholesale prices in Canada. By an arrangement made in 1919 under the Statistics Act, 1918, (confirmed by Order-in-Council October 16, 1922) the Bureau undertook the collection and compilation of statistics of wholesale prices, and the calculation of index numbers, etc. The Department of Labour, therefore, with the issue of the report for the calendar year 1917, discontinued the publication of statistics of wholesale prices in detail but continued to collect the statistics and calculated the index number for publication in summary form in the LABOUR GAZETTE from month to month (as had been done since 1911) until the Bureau of Statistics should bring out a reconstructed index number of wholesale prices in Canada. The present report is the result of this arrangement and contains prices in detail for the years 1918, 1919, 1920 and 1921, and summary tables of index numbers for 1922.

The index number of wholesale prices constructed and hitherto published by

the Department of Labour was first issued in a report on Wholesale Prices in Canada 1890-1909, by R. H. Coats, then Editor of the LABOUR GAZETTE, appointed in 1915 Dominion Statistician, in charge of the Census and Statistics Office, now the Dominion Bureau of Statistics. This report was followed by annual reports on prices for each calendar year 1910 to 1917, summary figures of index numbers (subject to revision) being issued each month in the LABOUR GAZETTE, from 1911 to the present time. For this index number the base period was 1890-1899, no system of weighting according to the importance of commodities being adopted (except in a supplementary calculation). The articles were grouped mainly according to purpose or use, partly according to origin and component material. The number of articles included was 230 until 1910, after which the list was increased to 272, and one article was dropped in 1915. The quotations were secured chiefly from trade journals and the market reports of newspapers, while for upwards of 100 articles quotations were secured from dealers or manufacturers. When constructed the index number was similar to that issued by the United

States Bureau of Labour and it was considered that it was advantageous to have the official index numbers of prices in the two countries on comparable bases. Since that time the United States Bureau of Labour Statistics has reconstructed its index number, using the year 1913 as base, adopting a weighted system and new groupings.

The new index number is calculated from 238 series of price quotations, there being more than one series for a small number of the commodities included. The year 1913 is adopted as the base period, the index number is weighted to allow for the importance of the various commodities, and three systems of groupings of commodities are used. In the publication of detailed statistics and in the principal analyses the commodities are grouped or classified according to "Chief Component Material" (vegetable, animal, wood, iron, etc.) The other classifications are according to "Purpose" (wood, clothing, producers' goods, etc.) and according to "Origin" (farm, forest, mineral, marine, etc.) The various points in the construction of the index number are discussed in the report as follows:

#### Commodities Included.

The original index number of the Department of Labour was constructed from 230 price series. Although a number of changes were introduced from time to time, some commodities having been dropped and others added (the net result of which was to increase the series to 272), the index has been substantially the same as when first published. It has been recognized, however, for some time that a revision of the list was called for. Several of the items had ceased adequately to represent the field from which they were drawn, and the sources from which others were obtained had proved no longer reliable. The new list contains 238 price series, as many as possible being obtained directly from reputable business concerns as the most dependable sources of information. This represents the addition of 51 new series, and the dropping of 85 others, whilst substitution of various kinds have been made in 130 cases.

#### Method of Grouping Commodities—Group Indexes.

The method of grouping the items for presentation and also for calculating group indexes is new, being in conformity with the general plan adopted throughout the Bureau in presenting statistics relating to commodities, so that co-ordination will be possible between the statistics of prices and those of imports and exports, production, transportation, etc. Briefly, the items are grouped on three distinct principles which are each applied separately. In the detailed tables of prices and in one of the series of group indexes the principle of grouping according to "Chief Component Material" (vegetable, animal, wood, iron, etc.) is adopted. At the same time independent classifications are constructed according to "Use or Purpose" (food, clothing, producers' goods, etc.), and according to "Origin" (farm, forest, mineral, marine, etc.). By this method each group has a degree of comprehensiveness and accuracy which is difficult to secure in a classification scheme which adopts more than one of these principles within the same category.

In the case of the Purpose classification a few very important commodities have been included twice so as to appear in both Consumers' and Producers' goods. In the Origin classification, in the sub-division into raw materials and finished products, it is of course the case that certain commodities cannot be classified definitely as raw or finished products, what is raw material from one point of view being finished product from another; e.g. copper ingots may be finished products from the point of view of the smelter but are the raw materials for several other industries such as that for producing copper wire. The Bureau, however, has divided all its commodities into two groups (1) Raw or Partly Manufactured Products; (2) Fully or Chiefly Manufactured Products. It was found impossible to define these two groups so precisely as to make them mutually exclusive, but the commodities were classified with the best judgment that could be brought to bear upon the matter. The results are thought to be better than if a few commodities had been selected as representative.

#### Base Period.

The original index number of the Department of Labour was based on the period 1890-1900. In view of the upheaval in prices occasioned by the war, comparisons are now called for in the main with the period immediately preceding it. In any event, comparisons with a period now so remote as 1890-1900 are not practical, and it is a fact.

that the more remote the base the wider is the margin of error in the index. In the revision carried out by the Bureau the year 1913 was therefore adopted as the base period, in conformity with the practice in most other countries. Prices in the year 1913 will in the present and in future reports be represented by the figure 100, and prices in prior and subsequent years will be expressed as percentages of those prevailing in 1913.

Weighting.

The Labour Department's index number was unweighted, but the number as published in future will be weighted, i.e., in calculating the general trend of prices each commodity will be assigned its relative importance in the trade of the country. That a weighted index number is more accurate and useful than an unweighted one is now generally conceded. Unless the list of commodities is very extensive a random selection does not always represent actual conditions; classes of commodities accordingly will be disproportionately represented and within each particular class the relative importance of individual items concealed.

The formula which has been used in computing the Bureau's weighted Index is that known as Laspeyres' viz:

$$\Sigma QoPi$$

$$\Sigma QoPo$$

Where  $\Sigma$  = Sum  
Qo=Quantities in base year.  
Pi=Prices in year compared with base year.  
Po=Prices in base year.

Qo represents the quantities of each commodity included in the index, marketed in 1913; where 1913 was not considered as a sufficiently representative year, an average of several years was taken. When data for 1913 were not available the best obtainable were used. In some cases where there was no specific information an estimate was made. The securing of exact weights is not feasible but it is thought that those adopted are approximately accurate.

The quantities used as weights are the quantities of the commodity actually marketed. Weighting according to quantities consumed or produced would doubtless give different results but the method of weighting according to quantities marketed or exchanged is more logical because much of what is produced does not reach the market in its original state, if at all, and would not affect prices in the same way as if it did. A strict consumption standard would not take account of quantities exported.

In arriving at the weights duplication was avoided as much as possible. For example, wheat appears again as flour and flour as bread. A deduction was therefore made from wheat for the amount that went into the manufacture of flour and from flour for the quantities made into bread. The same principle was applied throughout, as in the case of pig-iron and its finished products; oats, rolled oats and oatmeal barley and malt; cotton and its products; and so forth.

One of the advantages of this system of calculation and weighting is that the index numbers are "reversible", that is, the series of index numbers over a term of years (or months) may be calculated to a new base period by dividing the figures for each year (or month) by the index figure for the period or year to be used for the new base and multiplying by 100, without an appreciable margin of error as would be the case if the ordinary arithmetic average index number were so "reversed".

For the new index numbers in the present report the Bureau secured records of prices for the years 1919, 1920 and 1921 and also for the base year 1913, monthly quotations being obtained for most of the articles but weekly quotations for a number of the farm products.

An unweighted index for all articles is given by months and years for 1919, 1920 and 1921, and carried back from 1918 to 1890, by using the records of 260 of the articles for which the Department of Labour published quotations from 1890 to 1917 while the figures for 1918 to complete the series are given in Appendix E of the report. Table No. 1 affords a comparison of the weighted and unweighted figures by months for 1919, 1920 and 1921, and this is discussed in the report as follows:

It will be seen by reference to this table that the weighted index moves on a lower level than the unweighted. In the peak month May, 1920, there is a difference of 9.6 points. The smallest difference .1, was in March, 1919, and the greatest 14.4, in August, 1919. Comparing the yearly index numbers it will be seen that in 1919 the difference was 5.7 points or 2.7 per cent; in 1920 there was a difference of 6.9 points or 2.9 per cent and in 1921 it was 6.9 points or

4 per cent. It may be explained that weighting has reduced the influence of certain commodities which had risen to very high price levels and which in the unweighted number influenced the final results

unduly. The system of weighting has ensured that these can exercise an influence proportionate to their relative importance only, and the effect has been to reduce the level of the index numbers.

TABLE I.—WEIGHTED AND UNWEIGHTED INDEX NUMBERS, 1919, 1920  
AND 1921  
(Prices in 1913=100)

### The Prices Movement, 1919, 1920, and 1921.

In 1918, general prices rose steadily until December when a downward movement commenced which continued into the beginning of the year 1919. This was followed by a rise until August, prices remained nearly stationary during September and October and then rose rapidly from November until May, 1920, which was the peak month. Commencing with June, 1920, the descent began. July prices did not change much as compared with June, but both months were lower than May. August and September were much alike but both months showed a considerable decline from July. After September there was a steady drop until July, 1921. A momentary halt occurred in August of that year when prices rose slightly; then the descent continued until December.

The reduction of the price level in the early months of 1919 was a natural sequence of the cessation of hostilities in November, 1918. The vast war demand had suddenly ceased and industry and commerce had to take a new direction. This was quickly achieved and with the spring of 1919 what was, in effect, a boom period developed. The recent belligerents and others were in urgent need of many commodities and at this period there was an effective demand for them. Funds secured for the carrying on of the war by the liquidation of securities, loans and taxation were not yet exhausted. A very important factor was the demobilization of millions of soldiers, a large proportion of whom did not long retain the war gratuity which they received. The demand for com-

modities thus created, accelerated the industrial machinery which had tended to slow up immediately after the armistice and a further period of expanding credits, currency inflation, and rising prices occurred. The general level of Canadian prices stimulated by both home and export demand rose almost steadily, though the index of certain groups, noticeably the vegetable, animal and textile groups, may be said to have given in the fall of 1919 a sort of premonitory downward flutter, but by December all groups were again on the upward trend. The general price index turned definitely downward in May. Two groups, animal and non-ferrous metals, had commenced the descent earlier. Whilst the effective demand for commodities had been strong, stocks had been accumulating and when the slump in trade came these were thrown upon the market at greatly reduced rates. Raw silk was affected early in 1920 causing a crisis in Japan in March which was communicated to other countries. In Canada as in some foreign countries, the period of inflation was now succeeded by a period of restricted credit, currency deflation and falling prices, these factors causing unemployment, further decrease of effective demand, further price recession and so on.

For 1922 the report contains index numbers by months, in the grouping according to chief component material and a brief analysis of the prices movement. The unweighted index numbers have not been calculated for a later date than 1921.

The Bureau will in future issue from month to month bulletins giving the figures for the group index numbers and an analysis of the movement of prices. This information will also be given in summary form in the LABOUR GAZETTE. Following the publication of the report, the Bureau issued the first of its regular monthly bulletins bringing the figures for 1922 down to May, 1923.

The accompanying Table No. II gives the index numbers of the classification according to the "Chief Component Material" classification for the year 1922 and by months for 1922 and for 1923 down to May. Table No. III gives figures for the year 1922 and for each month of 1923 down to May for certain groups shown in the classification according to "Purpose" and according to "Origin".

The report contains, with the summary table of index numbers for 1922, a brief analysis of the movement from which the following extract is taken.

TABLE II WEIGHTED INDEX NUMBERS OF WHOLESALE PRICES IN CANADA, COMMODITIES, CLASSIFIED ACCORDING TO CHIEF COMPONENT MATERIAL, JANUARY 1922 TO MAY 1923  
(Average Prices 1913=100)

Groups	I Vegetable Products	II Animals and their Products	III Fibres, Textiles and Textile Products	IV Wood, Wood Products and Paper	V Iron and its Products	VI Non-Ferrous Metals and their Products	VII Non-Metallic Minerals and their Products	VIII Chemicals and Allied Products	ALL COMMODITIES

### Advance Note on 1922 Prices.

General prices in January, 1922, had fallen to 149.8. In February there was a rise of about two points and the index remained close to that level for four months. There was a slight drop in June but the level was restored in July. After that month, due largely to the influence of falling grain prices, the index dropped to 145.4 in September and then the movement turned upward reaching 150.9 in December so that prices were at the end of the year approximately one point above what they were at the beginning.

The course of the index number in 1922 clearly indicates that the deflationary movement, so obvious in the latter half of 1920 and during 1921, had, for the time being, been arrested. There was indeed a tendency for the price level to rise again up to and including July. The rise was, however, slight and seemed inclined to remain around a point approximately 50 per cent above pre-war prices. A fine harvest, bringing abundant supplies of grains and fodder, had forced prices down temporarily below this level but by the end of the year they were again hovering around 150.

Several interesting movements may be mentioned which contributed to the results just mentioned. In the beginning of the year there were heavy supplies of grain on hand,

as visible supply figures show; coupled with this was the fact that European markets had allowed stocks to decline and were existing on a hand to mouth basis. This policy was carried so far that in February and March an actual shortage was threatened. Consequently, there was an increased demand for Canadian wheat and this came at a time when visible supply figures had fallen considerably, with the consequence that prices rose steeply. Another factor was the failure of the Argentine crop to come up to expectations. After May the demand was not so acute, hence prices declined. The movement of new wheat was delayed a little because of uncertainty regarding the wheat board and when it did move the large supplies depressed the price to approximately \$1 in September. Bearish influences such as the European financial discussion were also effective. At the end of the year prices reached a higher level due largely to reports that European supplies and American supplies, visible and afloat, were below last year's figures, that the Australian crop estimates showed a falling off, and that world figures were expected to reveal a decline of 40,000,000 bushels from last year.

The sugar market also had an interesting development. In the beginning of the year Cuba had an abnormally large carryover and it was thought by many that the commodity would fall to lower values than prevailed at the end of 1921. They actually did so in January but certain factors created an influence which caused the price to climb

steadily until September. These factors were—extremely low stocks in the possession of American manufacturers, jobbers and retailers, necessitating a heavy demand, and the failure of the European beet sugar industry to recover as much as was expected, thus creating a strong demand from that quarter also for Cuban sugar.

*Rubber.*—Raw rubber was in a very critical condition during most of the year; the average price for plantation ribbed smoked sheets was in August 14 cents but the last quarter of 1922 showed a marked improvement. In December the price of this grade had risen to 27½ cents. Several facts contributed to this result. The world's absorption of rubber had proved to be greater than was anticipated. It was expected that the consumption for the year in America would be 240,000 tons instead of an earlier estimate of 180,000. Production was also smaller than was anticipated. Another factor which tended to improve the situation was the result of the report of the Stevenson Committee in England which had recommended curtailment of production by means of export duties.

*Wool.*—Wool prices have improved steadily throughout the year. For some time after the slump of 1920 the large stocks of wool held by the British Australian Wool Realization Association, coupled with cautious demand, depressed prices and it looked as though wool could scarcely recover until the huge stock which had been accumulated had been used up. But a situation developed in

TABLE III—GROUP INDEX NUMBERS (WEIGHTED) OF WHOLESALE PRICES OF COMMODITIES IN CANADA FOR THE YEAR 1922 AND JANUARY TO MAY, 1923.  
(Prices 1913=100)

Groups	Number of Commodities	1913	Year 1922	January 1923	February 1923	March 1923	April 1923	May 1923
CLASSIFIED ACCORDING TO PURPOSE FOR WHICH USED								
CONSUMERS' GOODS	98	100	149.5	150.4	150.4	152.6	152.1	146.8
Foods, Beverages and Tobacco	74	100	145.9	148.1	148.5	150.6	150.0	144.9
Clothing, Boots, etc.	11	100	161.8	164.1	164.1	165.1	165.3	165.6

Equipment and Supplies	16	100	189.0	188.3	187.0	188.8	188.8	184.5
Building Materials	32	100	162.0	163.7	164.6	166.8	166.1	167.3
Manufacturers Materials	100	100	137.5	132.9	137.1	139.4	143.0	143.6
CLASSIFIED ACCORDING TO ORIGIN								
I Farm (Canadian Products)	36	100	139.2	128.2	128.5	127.2	132.3	132.4
II Marine	8	100	142.7	132.3	127.6	126.7	128.6	138.0
III Forest	21	100	166.4	175.7	174.5	175.3	173.5	175.1
IV Mineral	68	100	155.5	156.4	155.9	158.3	159.0	157.8
All Raw (or partly manufactured)	108	100	145.5	142.7	144.2	145.2	148.0	147.9
All Manufactured (fully or chiefly)	130	100	154.9	156.5	160.0	164.2	164.3	160.0

the latter part of 1921 and during 1922 in which great inroads were made upon these stocks, and it was found that the woollen industry was consuming much more merino wool and more of other grades also than was being grown. In fact some observers predicted that once the rapidly diminishing reserve stock is gone the world will be faced with an actual wool shortage. In the face of these facts wool prices necessarily improved throughout the period under review.

*Cotton.*—When the post-war boom broke about May, 1920, the demand for cotton, as in the case of many commodities, fell off and this greatly decreased demand, coinciding with the largest crop since the war, brought prices to a very low point. In 1921 reduced acreage and a very poor crop brought the supply, including carryover from the previous season, almost to the level of a restricted demand. In 1922 it became apparent that future consumption would have to be met from current supplies and as, owing to the

depredations of the bollweevil, restriction of acreage, and somewhat unfavourable weather conditions, the American crop was not expected to be very big, some opining that it would be no larger than last season, prices in cotton rose considerably.

*Iron and Steel.*—An improved demand for iron and steel firmed prices about May. During the summer demand for these commodities was augmented because of the coal strike and later of the railroad shopmen's strikes in the United States, buyers being anxious to secure available supplies since lack of fuel and transportation difficulties made future supplies uncertain. Owing to these developments prices rose in the United States and sympathetically in Canada. With the cessation of the strikes the keen buying which had set in owing to threatened scarcity eased off, and markets became somewhat easier since there was no further question of supplies. Pig iron prices declined in October but rolling mill products retained their strength somewhat longer.

---

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES** — The Board of Trade index number of wholesale prices in April showed an advance of 0.7 per cent on the March level. Foods fell 1.1 per cent, with a rise of 2 per cent in cereals, a fall of 2 per cent in meat and fish, and one of 3.3 per cent in other foods. Industrial materials rose 1.7 per cent, owing chiefly to an increase in the prices of iron and steel. In the group of other metals and minerals advances were shown in the prices of coal. Prices of textiles showed little change from the previous month.

The *Statist* index number, in continuation of Sauerbeck's figures, was 134.0 at the end of April, or one per cent above the level at the end of March, and the highest recorded since July last. Foodstuffs rose 1 per cent and materials rose 0.9 per cent. Increases were shown by vegetable foods, and sugar, coffee and tea, in the foodstuffs division and by textiles in the materials division. The other groups showed slight declines.

The *Economist* index number at the end of April was 4,440, 1.1 per cent higher than a month previous, and the highest since the end of November, 1921. This increase was due to the movements of two of the groups, namely, primary foodstuffs and textiles. The principal changes in the former were increases in wheat, potatoes and pork. "Other foods" showed no change as the rise in sugar was exactly offset by a decline in butter. In the textiles group the chief change was a rise in silk. In the minerals group, steam coal advanced, and steel

rails and iron bars were unchanged, but there was a reduction in pig iron. Lead fell for the second successive month and copper and tin dropped slightly.

**COST OF LIVING.**—The index number of the Ministry of Labour showed a marked decline at May 1, falling 4 points, or 2.3 per cent to 170 (July, 1914=100). Foods fell from 168 to 162, mainly owing to the introduction of summer prices of milk, to a seasonal fall in the prices of butter and to important reductions in prices of butter and eggs. On the other hand granulated sugar rose in price during the month by  $\frac{3}{4}$ d per lb. Other articles of food showed slight change. The other items in the budget showed no change with the exception of rent which is given as 145-150 instead of 150 as in the previous month. At June 1, foods had fallen two more points, to 160, which brought the cost of living down one point to 169 although the other items of the budget showed no change.

#### Austria

**COST OF LIVING.**—The index number of the cost of living compiled by the Paritatische Kommission is now appearing in the new Austrian government journal "Statistische Nachrichten". The journal is to be published monthly by the Statistical Office, assisted by various employers' and workers' organizations, for the purpose of producing exact statistical data and thus assisting in the work of reconstruction. The index number showed for March a monthly increase of 6 per cent in the cost of living and for April one of 7 per cent. The contributing increases in each month were mainly found in the food group, with the addition of an increase in the price of coal in March. The prices of the majority of foods showed very little change during the period, the movement being caused mainly by rising prices of sugar and beef.

#### Belgium.

**WHOLESALE PRICES.**—The index number calculated by the Ministry of Industry and Labour (April, 1914=100) rose again 8 points or 1.7 per cent to 482 in March. All groups increased except food products and raw rubber, which decreased considerably and fertilizer, textile products and paper products, which showed little or no change.

**RETAIL PRICES.**—The index number for the Kingdom compiled by the Ministry of Industry and Labour (April, 1914=100) was one point higher in April, or 409. The weighted index of 30 foods declined 23 points or 5.3 per cent to 411 in the same month.

#### Finland.

**COST OF LIVING.**—The official cost of living index number of the "Socialministeriet" showed another slight decline to 1128.5 in March, on the base July, 1914=100. Foods, clothing and tobacco declined, rent, newspapers and taxes showed no change and the lighting and fuel group advanced. The separate index numbers are as follows: foods, 1065.7; clothing, 1078.7; rent 804.2; lighting and fuel, 1483.5; tobacco, 1287.0; newspapers, 1079.4; taxes, 2526.3.

#### France.

**WHOLESALE PRICES.**—The index number of the Statistique Générale (1901-10=100) was 479.5 for April, a decline of 2.2 per cent. The total index for foods showed a decline of one per cent although the sugar, coffee and cocoa group showed an increase. The total index for industrial materials showed a decline of 3 per cent, all groups sharing in the decline.

**COST OF LIVING.**—The index number compiled for the Commission of Studies on the Cost of Living showed for Paris an increase of 11 points or 3.8 per cent to 300 in the family budget for the 4th quarter of 1922 and a further increase of 8 per cent to 324 for the 1st quarter

of 1923—(1914=100). Food, heat and light, rent and clothing all contributed to the increase, sundries showing no change.

#### Germany.

**WHOLESALE PRICES.**—The official index number of the Federal Statistical office declined in March to 4888.2, from the February average of 5584.7, on the base 1913=1. Official efforts to support the mark, which were carried on in March have since been abandoned and with the fall of the mark the prices index rose steadily during April making the average for the month 5211.6, an increase of 6.6 per cent. Later the mark fell in value from 29,900 marks to the dollar in Berlin at the end of April to 46,000 marks at the middle of May and 70,000 marks at the beginning of June. This collapse was followed by corresponding price increases.

#### WHOLESALE PRICES IN GERMANY. (1923=100)

1923	18 foods	22 Industrial materials	All
Average for Feb....	4308.4	7971.0	5584.7
Average for March..	3336.2	7789.6	4888.2
Average for April..	3952.4	7565.6	5211.6

**COST OF LIVING.** — The official index number of the Federal Statistical Office for cost of Living (food, rent, heat and light and clothing) on the base 1913-14=1 was 2954 for March, just 100 points or 3.5 per cent above the March level. Heat and light and

clothing showed declines while foods and rent showed increases.

#### Spain.

**WHOLESALE PRICES.**—The official index number of the Institute of Geography and Statistics (1913=100) rose one point during March to 171. The index numbers of both foods and industrial materials participated in the increase, the largest increases by groups being in the two groups vegetable foods and textiles and leather. Slight declines in price were shown in the animal foods group and construction materials. The other foods group declined one point and the remaining groups showed no change.

**RETAIL PRICES.** — The official index number of retail prices at Madrid (1914=100) fell 3 points in March to 178. Animal foods declined 9 points and fuel and miscellaneous articles 5 points, while vegetable foods rose 7 points.

#### Italy.

**WHOLESALE PRICES.**—The index number compiled by the Chamber of Commerce and Industry of Milan advanced steadily during the first four months of the present year. In April the increase over the March level showed a decided slackening, three of the groups, textile materials, miscellaneous vegetable products and miscellaneous industrial materials, showing declines in price. The index numbers for the past four months are as follows:

\* For South Africa, Australia and New Zealand base is taken as 1900 instead of 1901. a. Average for year b. Quarter beginning in specified month. c. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. d. New index number is joined to old index number (38 commodities) and all converted to base 1913-1900. For the years 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. e. The commodities in these two index numbers are in the one case, articles chiefly imported. f. First of month. g. Middle of month. h. End of month. j. Monthly average. k. New Göteborgs Handels och Sjöfartstidning.

## India.

**COST OF LIVING.**—The official index number of the Bombay Labour Office showed a rise of one point in the cost of living in April, returning to the February level. The increase was due to a rise of one point in the index for all foods, rice having risen by 5 points and jowari by one point. The pulses group declined 3 points and other foods showed no change. Fuel and lighting and house rent showed no change, while clothing declined 7 points to 216.

## United States.

**WHOLESALE PRICES.**—The index number of the Federal Reserve Board showed for all commodities no change in April, remaining at 169 (1913=100). Goods produced rose one point to 165 and goods imported rose 2 points to 156, while goods exported fell 7 points to 186. Raw materials fell 3 points and producers' goods and consumers' goods rose 4 and 3 points respectively.

Bradstreet's index number of wholesale prices for June 1 was \$13.3841, a further decrease of 2 per cent. This is the lowest level since November 1, 1922, but is still 37.5 per cent above the level of August 1, 1914. For the month under review only the group building materials showed an advance. Eleven groups were slightly lower and fruits showed no change.

Dun's index number showed its second successive decline, standing at \$191.414, at June 1, 0.8 per cent below the figure of the preceding month, and 58.5 per cent above the pre-war basis. For the month under review five groups showed declines, while "other food" and clothing were higher than a month previous. All foods together declined about  $2\frac{1}{2}$  per cent, influenced by dairy and garden products. Compared with June 1, 1922, there were advances in every group except meats and dairy and garden articles.

Gibson's index of the average cost of foodstuffs embracing 22 articles of food was down to 75.6 for the May average, a decrease of 2.6 per cent on the previous month's level.

The *Annalist* index number of wholesale prices of a food budget of 25 foods, which has been declining fairly steadily since the end of March, dropped to 175.161 at June 9. This is the lowest point since the middle of February, 1922, and is 3.4 per cent below the figure of a year ago.

The index number of the Bureau of Labour Statistics showed no change for all commodities from the previous month, standing at 159 for April (1913=100). The largest increases for groups were 2 per cent in cloths and clothing, 3.4 per cent in metals and metal products and 3 per cent in building materials. Slight increases were shown in foods, chemical and drugs, and house-furnishing goods. Fuel and lighting showed a decline of 3 per cent and farm products and the miscellaneous group declined slightly.

**COST OF LIVING.**—The official cost of living index number for Massachusetts, compiled by the Special Commission on the Necessaries of Life, rose one point to 158.5 for April (1913=100). Every element in the budget showed an upward trend. Food prices increased about  $\frac{3}{8}$  of one per cent, prices of meats, fish, lard, tea, coffee, sugar, molasses, flour, bread, rice, potatoes and onions increasing, while prices of dairy products, eggs, corn meal, dried beans, vinegar, prunes and canned goods dropped. In clothing the greatest increase was in suits, men's shoes, hats, shirts, hosiery and cotton goods. Fuel increased slightly, in price and rents increased for houses of moderate value and tenements with conveniences. Rents for heated apartments and for apartments in choice locations showed a tendency to decline, some of these having been vacant all winter.

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

---

**T**HE two legal decisions which are summarized below have reference to cases of Workmen's Compensation in Alberta and Saskatchewan.

Elsewhere in this issue the text is given of a legal decision respecting

picketing which was recently delivered in the Superior Court of the District of Montreal; also an outline of a decision by the Supreme Court of the United States in reference to the validity of certain orders of the Kansas Court of Industrial Relations.

Common law action stayed to permit application to Compensation Board of Alberta to reconsider its decision.

A sectionman, who was injured when riding on a hand car in Alberta, signed an application for compensation which was forwarded to the Workmen's Compensation Board of that province. Some time later the claims officer of the Board informed him that they were unable to consider his action favourably owing to the absence of his attending physician's reports. The workman then brought an action against his employer under common law. While this action was pending two cheques were forwarded by the Board to the injured workman as compensation for three months. Both these cheques were returned the Board by his solicitor in view of the action taken at common law. The workman and his solicitor were subsequently notified by the Board that a hearing of his case would take place on March 9, but owing, it was said, to a misunderstanding, he was not represented at this hearing. An order was then made by the Board declaring that this workman was one within the scope of the Workmen's Compensation Act and that his injury was one in respect to which he had a right to compensation under the Act. The company with whom he had been employed immediately applied for an order dismissing the common law action on the ground that it was in conflict with the Workmen's Compensation law. This application was dis-

missed and the company appealed to the Supreme Court of Alberta.

On behalf of the plaintiff workman, it was claimed that the order of the Board should not have been made in his absence, and that the only notices he had from the Board were of a hearing of his claim to compensation and not of an application for a declaration that he came within the Workmen's Compensation Act.

In the judgment of the Supreme Court the question at issue was stated as follows:

The position then appears to be that if the matter has been properly adjudicated upon by the Board its finding that the plaintiff comes within the Act and that he is entitled to compensation thereunder, bars him from any remedy by action, but if the order made by the Board was improperly made, the question is whether he can proceed with his action and have the Court determine whether or not he comes within the Act, or failing that, whether he is entitled still to have the question adjudicated upon by the Board with a stay of the action meanwhile... I think the Board has exclusive jurisdiction to decide this question, and having decided it adversely to the plaintiff, there is nothing further for this Court to try, the effect of the Board's decision being to bar the plaintiff's common-law action.

But as the plaintiff had not been heard before the Board on the question of whether he came within the Act or not, the Court declared that the action

and proceedings upon this appeal would be stayed to permit of an application to the Board to reconsider its former decision, and to decide after hearing both parties whether or not the plaintiff comes within the pro-

visions of the Act and is entitled to compensation thereunder.

(*Alberta—Normandin vs. Edmonton, Dunvegan and British Columbia Railway Company and Central Canada Railway Company*).

**Driver for contractor hurt at distance from place of work does not come under Workmen's Compensation law of Saskatchewan.**

A workman employed on the construction of a rural telephone system in Saskatchewan was hauling a waggon load of poles from the railway station to the place where they were required, when he fell off the load about three miles from his destination, and sustained injuries. He brought an action against the contractor, his employer, under the Workmen's Compensation Act of Saskatchewan, in the District Court. His employer contended (1) That the work of constructing a telephone system is not "engineering work" and does not come within the provision of the Act; (2) That the work is exempt from the provisions of the Act, as being farm work within the meaning of section 14; and (3) that he had settled the plaintiff's claim before the action was brought.

The District Court Judge found against the defendant on all these points and awarded damages to the injured workman. The employer then appealed against this decision and obtained leave to set up as a new ground the contention that the accident did not occur while the workman was em-

ployed "on, in or about the work", and consequently the act did not apply to the case.

The Court of Appeal concurred in the judgment of the District Court Judge on the three points which were before him, but with regard to the new point that was raised the Court held that the accident did not occur in the course of the respondent's employment on, in or about the construction of the telephone system. This was a question of fact and as such was within the exclusive jurisdiction of the District Court Judge, unless in the opinion of the Appeal Court all the evidence that might affect the question was brought before both Courts and the trial Judge could not possibly have found, upon a proper application of the law to this evidence, that the accident did occur while the injured workman was employed "on, in or about the work." These conditions were held to have been established and the appeal was allowed.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

---

**T**HIS issue of the LABOUR GAZETTE contains, in addition to the regular monthly articles, a summary of legislation of interest to labour which was passed at the recent sessions of the Dominion Parliament and the Legislature of Ontario. In a special article an account is given of the action taken in the House of Commons and the Senate with reference to a bill to amend the Industrial Disputes Investigation Act, 1907.

Among other special articles may be mentioned a summary of the Interim Report of the Dominion Fuel Board, and an account of the plan of industrial pensions offered by the Government Annuities Branch of the Department of Labour.

**Monthly  
summary.**

During June there was a further marked improvement in the employment situation throughout Canada, the expansion being of a general character. At the beginning of June, the percentage of unemployment among the members of trade unions was 4.5 as compared with 4.6 at the beginning of May and 8.7 at the beginning of June,

1922. At the end of May a further marked increase in employment was reported by employers in practically all industries, with the greatest gains in construction, manufacturing and transportation.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.23 at the beginning of June, as compared with \$10.36 in May, \$10.18 in June, 1922, \$11.16 in June, 1921, \$16.92 in June, 1920 (the peak) and \$7.49 in June, 1914.

The time loss due to industrial disputes during June was less than in the previous month and also less than in June, 1922. Twenty-five disputes began or were progress during the month, involving 6,908 employees and causing a time loss estimated at 55,609 working days. Corresponding figures for the previous month were 35 disputes involving 4,732 employees and a time loss of 65,838 working days, and for June, 1922, 25 disputes involving 11,093 employees and a time loss of 12,608 working days. At the end of June there were 17 disputes in progress involving 7,514 employees.

**Proceedings under the Industrial Disputes Investigation Act.** One report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, was received by the Department in

June. Two applications for the establishment of Boards were received and one Board was established during the month.

**Government annuities.** On April 1 the Government Annuities

Branch was transferred to the Department of Labour from the Post Office Department. The object of this branch is the encouragement of thrift, by providing a safe yet inexpensive means of acquiring a pension in old age. On another page of this issue there is printed in full an address delivered by Mr. Bastedo, superintendent of the Branch, at the annual meeting of the Canadian Manufacturers' Association, in which he explained how employers may with advantage avail themselves of Government Annuities for the purpose of 'pensioning their employees. As an illustration of the interest which is being taken by the industrial classes in the Government Annuities Act, it might be mentioned that an application for an annuity was recently received from a resident of Nova Scotia who gave his occupation as "labourer". Accompanying the application was the amount in cash required to purchase the annuity, the savings no doubt of not a few years. By thus cultivating a habit of thrift, and taking advantage of the Government Annuities System, this applicant has adopted a safe, sure and profitable means of making provision for his old age.

**Wages changes in various countries 1914 to 1922.**

The International Labour Office (League of Nations), Geneva, has issued a report entitled "Wages Changes in Various Countries, 1914 to 1922". In an earlier report published last year, the movement of wages in thirteen countries was followed from 1914 to 1921. In the present volume, the movement in fourteen countries is continued as far as possible to the end of 1922. In a number of cases the figures are available to December, 1922, and a survey is given in other cases of the most recent data available. The object of the study is to trace the movement of money wages in various countries, especially during recent months, and by comparing these changes with the general level of prices, to estimate the combined result on the real wages of the workers. Further, by basing the calculations on the pre-war position, conclusions may be drawn as to the level of real wages at the present time in comparison with that in 1914; in other words, to determine how far money wages have been adjusted to the cost of living. The fourteen countries for which statistics are presented are as follows: Great Britain, France, Belgium, Sweden, Norway, Denmark, the Netherlands, Germany, Austria, Bulgaria, the United States, Canada, South Africa and Australia. In a prefatory note to the report it is observed that care should be taken in drawing any sweeping conclusions based on the wage statistics presented in this study. The data given for each country cannot be considered as wholly typical and represent only what was most available. No international comparisons are instituted of wages in different industries. It is stated in the report that according to the level of real wages, the countries of the world for which adequate data are available may be divided into three main groups; namely, those in which real wages are definitely higher than before the war; those in which, the level is about the

same as, or only slightly higher than in 1914; and those with lower real wages than in the pre-war period. These generalisations, however, are subject to many exceptions in the case of different industries and occupations within each country. The first group includes Sweden, Norway, Denmark, the Netherlands, and Australia; the second group, Great Britain, France, Belgium, the United States, Canada and South Africa; the third group, the Central Powers — Germany and Austria — together with Bulgaria.

#### Unemployment Insurance.

Mr. James D. Craig, Actuary of the Metropolitan Life Insurance Company, New York, in a recent address before the Actuarial Society of America asserted that insurance companies could "undertake for employers a trusteeship of industrial depression reserves, or unemployment premiums, and agree not only to pay employees under prescribed conditions, but also to assist the employer in stabilising his business." Mr. Craig alluded to the importance of group life, health, accident, and pension insurance in the industrial field and asked "Why should an employer not agree to place his unemployment funds in an insurance company in precisely the same way as he agrees to place his pension fund, his life insurance fund, and his health insurance fund?"

Mr. Herbert Hoover, United States Secretary of Commerce, was quoted as having expressed the view that unemployment insurance in the hands of the Government was an encroachment of bureaucracy into the daily life of the people and that more thought should be devoted by insurance men to the problem of insurance against unemployment as the one great field remaining in which insurance could be employed scientifically, founded on a basis of actual savings, and contributed to by the employer.

Mr. Craig reviewed the various state schemes of unemployment insurance instituted in Europe and reported unfavourably on compulsory insurance. "The best thought," he said, "seems to focus on the initiative being taken by the individual employers. Under compulsory insurance schemes the demand for ever increasing benefits and decreasing restrictions, the activity of certain classes of industries for special consideration, the insistence of standards of employment and pay when economic conditions do not warrant, as well as the resistance to compulsory employment if accompanied by reduction of wages, all contribute to make political unrest and retard the upward movement of business." These objections, in Mr. Craig's opinion, did not exist where the initiative was taken by individual employers and the fund was accumulated in each industry to meet its own inherent risks. In establishing such a fund, the employer has his own interests at stake, as the more the industry can be stabilized the less will be the amount required to maintain the fund.

#### Unemployment insurance in Chicago Clothing Industry.

A plan of unemployment insurance has been adopted in the clothing manufacturing industry of Chicago after lengthy negotiations between the manufacturers and the Amalgamated Clothing Workers' Union. The Research Department of the Union has been studying this question for the past three years. According to this plan any member of the Union who has been at work in Chicago for a year will be entitled to receive unemployment benefits to the amount of 40 per cent of his full earnings, but never more than \$20 per week. He will begin to receive them at the end of his second week of unemployment and may continue to receive them for five weeks of the insurance year. His unemployment must be involuntary and not due to any fault of his own or to a strike or

stoppage called by the Union. Half the contributions to the fund are to be paid by the employers and half by the members of the Union. The limit of the contribution is one and a half per cent of the wage bill. The Union undertakes to receive an agreement from each member that the employer may deduct from his weekly wage his share of the contribution to the unemployment funds. This with the employer's share is to be in the charge of a Board of Trustees on which both parties will be equally represented. The trustees are to choose one or two neutral members mutually agreed upon. Collections began with the first payroll week on or after May 1, 1923, and will be continued until January 1, 1924, before benefits can be paid. The agreement to maintain the fund expires on April 30, 1925, when it may be renewed, but if a renewal is not effected the trustees have the legal power and duty to hold and dispose of the fund in such a manner as will best carry out the spirit and purpose of the agreement.

#### Mine rescue standards.

The United States Bureau of Mines has issued a publication on mine rescue standards (Technical Paper 334). The paper contains the report of various sub-committees of the Standardization Committee which was appointed at the International Mine Rescue Standardization Conference held at St. Louis in September, 1921, as a direct result of a proposal made by the Honourable William Sloan, Minister of Mines of British Columbia, (see LABOUR GAZETTE, November, 1921, page 1338). Sub-committees were appointed to deal with the following subjects: International mine rescue standards; rescue apparatus requirements and tests for permissibility; physiological effects in use of mine rescue apparatus and methods for detection of dangerous gases; regulations for use of mine rescue apparatus in coal mines; regulations for use of mine

rescue apparatus in metal mines. The standards and rules contained in the paper are not in any sense final but are subject to further consideration, and all persons with a practical knowledge of the subject are invited to send constructive comments to any member of the committee or to the secretary, J. W. Paul, Bureau of Mines, Washington, D.C. Mr. George S. Rice, chief mining engineer of the United States Bureau of Mines is general chairman of the Standardization Committee.

#### Extra compensation for illegally employed minors.

In the April issue of the LABOUR GAZETTE on page 356 an account is given of a report with reference to industrial accidents to children in the State of New York, in which it was mentioned that the question arose as to whether the State ought not to penalize the employer for employing a child illegally by the adoption of the treble compensation plan. During the recent session of the State legislature an act was passed which amends the workmen's compensation law by providing that double compensation or death benefits shall be paid by the employer when any young person under the age of 18 is injured or killed while illegally employed. The employer may not insure himself against this provision. An act providing for double compensation was also passed during the recent session of the Indiana legislature.

A law of the State of Wisconsin, which is reported to have been in successful operation since 1917, provides that when an injured employee is a minor illegally employed, the compensation shall be trebled and shall never be less than the actual wage loss. The employer is made liable for the entire increase in compensation, which would amount to two-thirds of the total, and insurance companies are not allowed to pay the increased compensation due from employers who have

violated the child labour law, unless these employers are insolvent. It was previously the practice of the insurance companies to undermine the enforcement of the child labour law by advertising that they would protect the employer even if the injured employee were a minor illegally employed. Treble compensation under the Wisconsin law is a contractual obligation assumed by employers when they accept the provisions of the compensation act, and is in a legal sense not a penalty for the violation of the child labour law. Even if an employer has paid treble compensation he may still be sued for the forfeiture which the child labour law prescribes as the penalty for violation of its provisions; although in practice this has seldom been done in the State. In Wisconsin, in 1921, 97 employers paid \$24,599 in increased compensation for violation of the child labour laws, this amount being paid to the minors who were injured while illegally employed and not into the public treasury. In New York, with six times as many people engaged in industry as in Wisconsin, there were in 1920, 1,163 convictions for violation of the child labour law, but in 638 of these cases sentences were suspended, and the fines in the other 525 cases totalled only \$11,465. Before the passage of the Wisconsin law minors under sixteen employed without a permit were held to be outside of the compensation act, while minors under sixteen employed on a permit but at a prohibited employment, as well as minors over sixteen employed at prohibited work, were held to be under compensation but entitled only to the same recovery as minors legally employed. Now all minors of permit age or above are under compensation, but if illegally employed get treble compensation. Minors under permit age, however, are still outside of the Wisconsin act.

The State of Oregon also provides extra compensation to illegally employ-

ed minors. This law provides that when children illegally employed are injured the employer must pay into the state fund a penalty equal to 25 per cent of the compensation, but not exceeding \$500, unless the industrial accident board excuses the employer from this penalty upon showing that the violation was not intentional.

**United States  
government  
employees  
entitled to  
compensation  
for industrial  
diseases.**

The United States Department of Justice, in a decision rendered on May 17, confirmed the full authority of the United States Employees' Compensation Commission to pay compensation for disabilities arising out of occupational diseases. This decision reverses an earlier ruling of the Comptroller General who declared that occupational diseases were not covered by the federal compensation law and that compensation could be paid only for disability resulting from a personal injury definitely determinable by place and hour. The Attorney-General in his decision held that the Compensation Commission "has the power, by virtue of the act under which it was created, to construe the terms of the said act, and that any construction so rendered is final and beyond interference by other government officials", and further that "The fundamental purpose of an employee compensation act is a humanitarian one. It should be, therefore, administered with some regard for humanitarian principles. The Employees' Compensation Commission, acting in accordance with powers conferred on it by law, has construed a term 'personal injury' in the manner best suited to carry out the purposes of the law." Under the ruling of the Comptroller General payments had been stopped to some 200 employees disabled by illness growing out of their employment. Among the diseases from which these employees suffered were lead, mercury, carbon monoxide and

TNT poisoning, anthrax and tuberculosis.

**The National Economic League and entrance of the United States into the League of Nations.**

The National Council of the National Economic League, an organization of the United States the purpose of which is "to create an informed and disinterested leadership for public opinion—a lead-

ership that is free from partisan bias or class interest and that will be accepted as representing simply the best thought of the country", recently took the opinion of the members of the Council on a number of questions concerning international relations, among other things, whether the United States should participate in the League of Nations, the Permanent Court of International Justice, and the International Labour Organisation. The questions put to the members and the result of the voting on the three last mentioned points were as follows:

"Should the United States enter the League of Nations with such reservations as may be acceptable to the Government of the United States?"

Yes	No	Blank or with qualifications
890	327	41
(71%)	(26%)	(3%)

"Should the United States join in supporting the Permanent Court of International Justice?"

Yes	No	Blank or with qualifications
1,173	51	34
(93%)	(4%)	(3%)

"Should the United States participate in the work of the International Labour Organisation?"

Yes	No	Blank or with qualifications
754	367	137
(59%)	(30%)	(11%)

It should be noted that the National Council includes in its membership (at present about 3,000) presidents and professors of universities, judges, lawyers, bankers, merchants, manufacturers,

farmers, labour leaders, etc. The aim has been to make it representative of the informed and unbiased opinion of the entire country. Its members are nominated and directly elected from their own states with this end in view.

**Licensing of plumbers in Saskatchewan.**

A new licensing system for plumbers has been approved by the city council of Regina, Saskatchewan. Under the regulations persons intending to work at the plumbing trade in the city must within thirty days from the passing of the by-law apply to a Board of examiners consisting of the city plumbing inspector and two practical plumbers, a journeyman and a master plumber, appointed by the medical health officer, and one member appointed by the City Council. Journey men plumbers are required to pay a fee of \$2 for the first year and \$1 for succeeding years. An annual inspection of the plumbing in all buildings except dwelling houses, and of dwelling houses upon change of tenants, is also required. Similar rules are in force in Saskatoon, Moose Jaw and other cities in the Province, and an effort will be made to establish reciprocity between these cities in regard to plumbing licenses.

**Boy labour on British docks.**

In 1922, a report was issued by the British Ministry of Labour on casual employment of boys in ship repairing and on dock work at Liverpool, England, a summary of which was given in the LABOUR GAZETTE of April, 1922, on page 375.

Recently a report was presented to the House of Commons by the Joint Parliamentary Advisory Council of Women Social Workers and Members of Parliament on the urgent need of reform in the conditions and the present system of engagement of casual boy labour at the docks. This report was the result of an inquiry regarding conditions of work, system of engagement, and social

effect on the boys. The conclusions of the Council as a result of the inquiry were: (1) that the conditions of boy labour in ship repair work are in certain definite respects highly unsatisfactory and in need of amendment; (2) that the fundamental evil affecting boy labour in dock work proper is the stand system of engagement. It has been condemned for adults but is still maintained for boys at certain ports, and is a constant source of demoralization; (3) that it is desirable to provide wholesome occupation for the boys when waiting for work. The Council therefore recommended that the Factory Act be extended to cover boys employed on ship repair work; that special attention should be directed to the conditions under which boys are employed to clean the boilers; to the provision of electric torches instead of open lamps where artificial light is necessary for repair work in dark parts of ships; and the provision of protective clothing by employers where the work is of a specially dirty nature; that the stand system of engagement be abolished and the tally system substituted; that general welfare work for these boys, including the erection of recreation huts in connection with the juvenile labour exchange should be instituted by voluntary effort. They also recommended that there should be a responsible committee of management which should obtain recognition from the Ministry of Labour and every encouragement from the local dock authorities.

**Dangers in  
removal of  
covers of loaded  
tank cars.**

The Railway Association of Canada has issued a circular drawing attention to the dangerous practice of removing dome covers of loaded tank cars, while such cars are located in railway yards, to take samples of lading for customs or other purposes. This practice is said to be in violation of Paragraph 1871 (d) of the Regulations for the Transportation of Explosives

and Other Dangerous Articles by Freight, which reads as follows: "Unauthorized persons must not be allowed to have access to explosives or other dangerous articles at any time while such articles are in the custody of the carrier." It is pointed out that the opening of a dome is a most dangerous operation and should only be attempted when the car is located on the site where it has been determined that unloading operations can be safely conducted, and never in a congested freight yard or on an active switching track, and that local officials through co-operation with the customs officials should be able to arrange for cars to be placed upon unloading track before dome covers are removed. Special attention is drawn to the danger connected with casinghead gasoline. It is further stated that if shipments have to pass customs at a port of entry short of destination, the cars should be so placed as to be free from danger and the dome cover should only be removed under the supervision of a responsible railway representative. The Bureau of Explosives recommends the following practice in the removal of dome covers of loaded tank cars: (1) Raise safety valve to see if there is any interior pressure in tank. Dome cover must not be removed while such pressure exists. Where pressure is found it must be reduced by cooling tank with water, or relieved by raising safety valve at short intervals. If opening of safety valve shows there is sufficient pressure to cause a dangerous amount of vapour to collect outside the car, it must be left closed until the pressure is reduced by cooling the car with water, or unloading must be delayed until the following morning after pressure has been reduced by lower temperature during the night. (2) After pressure is released, break seal and remove dome cover. Screw Type—Loosen by placing bar between dome cover lug and knob. Stop unscrewing after two complete turns so that vent openings are exposed and observe if there is any

sound of escaping vapour. If so, cover must again be screwed down and its removal delayed until escape of vapour through the vent openings cannot be heard. Hinged and bolted type—Loosen all nuts one complete turn and then sufficiently more to open up cover. Interior manhole type—Carefully remove all dirt and cinders from around cover and then loosen screw in yoke.

**The  
Agricultural  
Credits Act  
of the  
United States.**

The Agricultural Credits Act of 1923 of the United States completes a legislative programme that has been under consideration

more or less directly for a period of ten years. The mortgage credit facilities provided through the Federal Farm Loans Act of 1916, materially improved the situation with reference to farm mortgage or ownership credit, but made no provision for production or marketing credit. The need for marketing credit has been particularly emphasized in recent years by the rapid development of co-operative marketing associations. But for the temporary assistance of the War Finance Corporation, these associations would undoubtedly have experienced much difficulty in obtaining the credit required.

Under the new Act a Federal intermediate credit bank is to be established in each of the twelve land bank districts, and is to be located in the city in which the Federal land bank of the district is situated. The purpose of these banks is to furnish discount facilities to banks and other financial institutions and to farmers' co-operative marketing associations for terms of not less than six months nor more than three years.

The law also authorises the organisation under Federal charter of national agricultural credit corporations which may make loans and discounts for agricultural purposes, including the breeding and fattening of live stock.

The act also provides for the establishment of the so-called permanent organisation of twelve Federal land banks and provides for the appointment of a joint committee of Congress to inquire into the problem of encouraging state banks to avail themselves of membership in the Federal reserve system.

**Trade Unions  
in Russia  
during 1922.**

According to statistics concerning the numerical strength of the Russian trade

unions during 1922 published in the February issue of *Statistika Truda*, the monthly organ of the All-Russian Central Council of Trade Unions, there was a general decline in the numbers both of the organizations and of their membership during the period under observation. The extent of the decrease in the number of organizations is given as 1,700 between January and October, 1922, or 20.1 per cent. As regards the membership of the organizations, a decrease had already begun to take place in 1921. This was attributed to various factors, among which the most important were the cutting down of the staffs of factories and Soviet institutions, the concentration of certain branches of industry and the purification process instituted in trade union circles which resulted in the exclusion from the unions of many classes of workers as being non-proletarian elements "kustari" (artisans), members of "artels", workers in village communes, etc. During 1922 the fall in membership continued owing to the abolition of compulsory membership. A table illustrating the persistent decline in the total membership of the trade unions during a period of 15 months is shown. The fall in membership was, however, not uniform throughout the country, being much less in the large industrial centres than in other regions. A table is given showing trade union membership in 1922 in the seven most important

industrial areas, from which it is seen the three most important industrial centres, viz., Moscow, Petrograd and Ivanovo-Vosnessensk, show a comparatively small decrease in trade union membership, while the remaining cities—Donetz, Ekaterinburg, Vladimir and Tula—show a sharp reduction, due chiefly to the exit from the unions of non-industrial elements such as agriculturists, soviet employees and sanitary workers. From the analysis given of the decrease in membership according to trades, it is evident that the more important industrial unions suffered less than the others.

**Salaries and  
wage rates in  
Germany.**

Tables are published in the May, 1923, issue of *Wirtschaft und Statistik* giving statistics of

the average monthly earnings of high, intermediate, and low-grade state officials in one of the districts of Germany in which the cost of living is generally highest. The figures include allowances paid in respect of wife and two children. Various special local bonuses now being paid, but which are of a very fluctuating character, are not included. Figures are also given based generally on the average monthly wage rates of skilled and unskilled workers in important industries such as building, woodworking, metal, textile, chemical and printing industries. The earnings are shown both in the form of money wages and what are described as real wages. The money earnings in March, 1923, in comparison with those before the war show wide differences in relative increases. These vary from 979 times the pre-war salaries in the case of high-grade officials, to 2797 times the pre-war wages in the case of unskilled workers. Before the war the higher grade officials received salaries 6.04 times the wages of unskilled workers, whereas in March, 1923, without taking count of amounts paid in taxation, they received only 2.11 times the wage paid to unskilled workers.

The real salaries and wages are calculated by comparing the nominal salaries and wages with changes in the cost of living as measured by the official index number. The results show that the real salaries of the higher grade officials were, in March 1923, equal to 34.3 per cent. only of the pre-war rates. The real salaries of intermediate grade officials are shown as 42.7 per cent. and of low grade officials 64.6 per cent. of the pre-war rates. The real wages of unskilled workers were 56.1 per cent, and 73.9 per cent. of the pre-war rates in February and March, 1923. The real wages of skilled workers were 74.9 per cent. and 98.4 per cent. of the pre-war rates during that period. The marked improvement in real salaries and wages between February and March 1923 was due to the comparatively small increase (8 per cent.) in the cost of living during that period. It should be noted that the cost of living figures are based on a post-war budget which does not include certain commodities of ordinary consumption before the war, owing to their excessive price or even entire absence from the market. Many of the goods available are inferior in quality to those purchased before the war. These considerations prevent a true comparison between real wages and salaries in pre-war and post-war periods.

---

Conventions of the following Canadian labour organizations and international labour organizations having affiliations in Canada will be held during the months of August and September:

Canadian Electric Trade Union, at Hamilton, Ont., on August 1.

Federation of Catholic Workers, at Quebec, Que., in August.

United Garment Workers of America, at Detroit, Mich., in August.

International Typographical Union, at Atlanta, Ga., on August 13 to 18.

Hotel and Restaurant Employees' International Alliance and Bartenders' International League of America, at Chicago, Ill., on August 13 to 20.

International Brotherhood of Electrical Workers, at Montreal, Que., on August 20.

The International Photo-Engravers' Union, at Milwaukee, Wis., on August 20 to 26.

Trades and Labour Congress of Canada, at Vancouver, B.C., on September 10.

Canadian Brotherhood of Railroad Employees at Calgary, Alta., in September.

National Federation of Federal Employees, at Denver, Colo., on September 3 to 8.

Coopers' International Union of America, at Philadelphia, Pa., in September.

International Association of Fire Fighters, at Montreal, Que., on September 10 to 15.

United Textile Workers of America, at New York, N.Y., on September 10 to 17.

Bakery and Confectionery Workers' International Union, at Los Angeles, Cal., on September 10 to 20.

International Brotherhood of Boiler-makers, Iron Ship Builders and Helpers of America, at Kansas City, Mo., in September.

International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, at Philadelphia, Pa., on September 10 to 24.

Metal Polishers' International Union, at Cincinnati, Ohio, on September 17.

Operative Plasterers and Cement Finishers' International Association, at Denver, Colo., on—September 17 to 30.

A commission has been appointed in Ontario to consolidate the Public Statutes of the province. The last consolidation was completed in 1914. The

Honourable Sir William R. Meredith, Chief Justice of Ontario, is the chairman of the Commission.

A conference is being held at Vancouver during the present month under the British Columbia Minimum Wage Board to consider the revision of the existing minimum wage rate of \$14 a week for female workers in industry. The conference is the result of a petition to the Board from manufacturers affected by the order who contended that the cost of living, on which the present rate is based, has fallen since the order was put into effect in September, 1919. It is stated that about 1,500 women and girls in the province are within the scope of the order now under review.

At the convention of the Ontario District Council, United Brotherhood of Carpenters, which was held in Ottawa on June 28 to 30, a resolution was adopted unanimously calling for an amendment to the Ontario Workmen's Compensation Act, to include all classes of labour within the scope of the act, whether employed publicly or privately. Another resolution was adopted favouring the inclusion in all provincial government contracts of fair wage clauses. It was decided that a copy of this resolution should be forwarded to the provincial government and that the Dominion Trades and Labour Congress be asked to co-operate in the procuring of these changes. Mr. W. H. Guy of Guelph was elected president of the Council for the coming year.

The University of Saskatchewan, in co-operation with the Provincial Department of Education, is holding, during July, its seventh session for the benefit of school teachers. Twenty instructors and professors conduct the various classes. The programme of the teachers' course includes elementary science and agriculture, advanced science, household science, primary education method, art, French, and

health education. Board and lodging for the period of the courses is provided at reasonable cost in Saskatchewan Hall.

At a recent banquet of the Toronto Typothetae two working compositors from each office represented at the banquet were present as the guests of the Typothetae. Mention was made of the scarcity of young apprentices in the printing trade.

The Federated Women's Institutes of Canada, at a convention held last month at Fredericton, delegated some of their members to lay before the Dominion Government a plan for the establishment of a Federal department of home economics.

The Canadian Manufacturers' Association has issued a report (166 pages) containing a record and summary of the progress of scientific and industrial research in Canada. The report contains the addresses delivered at the National Research Conference held under the auspices of the association at Ottawa on February 20-22, and includes statements by the representatives of government departments, universities, colleges, industries and others engaged in research work.

The Board of Railway Commissioners of Canada have issued a memorandum regarding accidents to automobiles at railway crossings in Ontario, in which they draw attention to the large number of accidents caused by carelessness of motorists. They state that on the Grand Trunk lines from October, 1922, to May 9, 1923, there were 54 cases where danger was incurred at protected crossings due to negligence of those using the crossings, all but four of which were due to the carelessness of motor drivers. Twenty-eight of these cases were due to not heeding stop signals. Among other practices were "Throwing gate up to get under", "Ran in under gates while they were down for yard engine", "Running into gate and breaking same",

"Running in when lowering gates", "Meeting other persons and holding conversation while crossing tracks", and "Carelessness in not looking for approaching trains".

About twenty-five representatives of the Co-operative Association of Alberta met at Wetaskiwin on June 4. Resolutions were adopted in favour of the co-operative societies in Alberta applying for affiliation with the Co-operative Association of Canada as soon as sufficient societies are affiliated to justify the organization of a provincial section of the union, and that the delegates proceed with the organization of a provincial association for the purpose of meeting together to discuss problems in connection with the development of co-operation in the province. It was agreed that the organization be known as the Alberta Co-operative League. Mr. A. Titt of Bentley was elected president of the association.

An Act to amend the Lord's Day Act of Manitoba, passed at the last session of the Provincial Legislature, the validity of which had been challenged by the Lord's Day Alliance, was upheld unanimously by the Supreme Court of the province in a recent judgment. The amending act permits any person or corporation to convey passengers to summer resorts on Sunday, its purpose being to enable Winnipeg citizens to make excursions on that day to the beaches on Lake Winnipeg. It is stated that the Alliance will appeal the case to the Privy Council.

The Ontario Workmen's Compensation Board paid out, during the half year ending June 30, 1923, benefits amounting to \$2,956,547, as compared with \$2,917,962 during the corresponding period of 1922. Of the former amount, \$2,563,078 was for compensation, and \$393,469 for medical aid.

The president of the Board of Trade of Great Britain, replying to a question in the House of Commons in June,

stated that under the present law the payment of seamen's wages terminated on the loss of a vessel, and that the British Government had no power to require the Canadian Pacific Railway Company, owners of the steamship *Marvale*, wrecked recently off the coast of Newfoundland, to pay compensation to the crew. He also stated that no complaint had been received regarding the treatment of the crew while homeward bound to England on the steamship *Melita*.

A recent report of the United States Bureau of Mines indicates that fewer lives were lost in metal mine accidents in 1921 than in any previous year covered by reports of operating companies to the Bureau. Likewise, the number of men employed at the mines was smaller than in previous years, as were also the total shifts worked by the employees and the average number of workdays per man. The reports showed 93,929 employees who worked 22,352,702 shifts during the year, an average of 238 days of work per man. Accidents killed 230 men and injured 18,604 others, thus indicating a fatality rate of 3.09 and an injury rate of 249.69 per thousand men employed, based upon a standard year of 300 working days. In 1920 the fatality rate was 3.16 and the injury rate was 242.02. The reduction in total shifts worked by all employees in 1921 amounted to 45 per cent as compared with 1920. This loss was largest for copper mines and least for gold and silver mines.

At the annual conference of the Workers' Educational Bureau of America in April last, mention was made of a principle adopted by the University of California which is similar to that of the Workers' Education Association of England, in that a sum of money has been set aside for labour education and a labour man engaged to have charge of the work. The university also secured the approval of the California State Federation of Labour and enlisted the co-operation of the unions and obtained

their advice on the selection of teachers and of courses.

Fifteen students recently graduated from the Brookwood Workers' College at Katonah, New York. Of the fifteen graduates ten are boys and five are girls. The members of the graduating class represent: The International Ladies' Garment Workers, the United Mine Workers of America, the Coopers' International, the Amalgamated Food Workers, the Brotherhood of Railway and Steamship Clerks, and the Union of Post Office Workers of Great Britain.

The Swedish Riksdag recently approved a bill under which women are admitted on the same footing as men to the public services, with the exception of military and kindred services, the Church and presiding judgeships in the highest Provincial courts. The bill was introduced by the recent Branting Government and its approval was obtained with but slight amendment.

On May 1, the *Gazzetta Ufficiale* of Italy published the text of a decree repealing Article 5 of the Act of 1907 relating to the employment of women and young persons, and substituting a text embodying the provision of the two draft conventions adopted at the First session of the International Labour Conference held at Washington in 1919. The principal changes effected by the decree are: (1) The raising from 15 to 18 years of the general age limit for the employment at night of young persons, and (2) the definition of the term "night" as a period of eleven consecutive hours including the interval between 10 p.m. and 5 a.m. instead of a period defined as 8 p.m. to 6 a.m. from October 1 to March 31, and from 9 p.m. to 5 a.m. from April 1 to September 30.

New regulations to govern the issue of licenses to milk and cream testers and graders and to creameries and cheese factories were issued recently under the Alberta Dairymen's Act.

The British Columbia Minister of Mines and Chief Inspector of Mines recently made a special inspection of the coal mines of Vancouver Island, having in view the protection of the lives of the workers.

The lowering of the pension age for female school teachers in Quebec from 56 to 50 years was advocated at a large meeting of the Catholic Alliance of Montreal Professors, teachers' section, held at Montreal during May.

The general management of the Swiss federal railways has decided that in the case of tenders for work or supplies on behalf of the administration of these railways, employers must bind themselves to take no steps for the engagement of workers or employees without at the same time informing the competent cantonal office of the staff it requires, thus giving the office an opportunity of supplying suitable labour. Employers are entitled to engage workers who present themselves in person, but they must immediately notify the Labour Office. They need not engage the workers sent them by the office, but they must inform the latter whether they have engaged or refused such workers.

Unemployed persons who have been out of work for a considerable period often find it difficult to take up a new situation owing to their lack of the ne-

cessary equipment, especially working clothes. The Prussian Minister of Welfare, in agreement with the Federal Minister of Labour, has issued a decree authorising advances from the unemployment relief fund to supply the necessary working equipment and clothes to unemployed persons who have a prospect of at least six weeks' employment. Either the articles themselves or the money for their purchase will be issued as a loan to the persons in question. In cases of special hardship the communal authorities may remit repayment up to twelve times the daily rate of unemployment benefit.

According to the *British Labour Press Service* of April 19 one of the most promising of the schemes for dealing with the problem of juvenile unemployment has been successfully adopted at Birmingham, where the Education Committee has opened three schools for unemployed young persons between the ages of 15 and 18. Arrangements have been made for boys to attend in the mornings and girls in the afternoons, and payment of unemployment benefit is conditional on regular attendance. Over 400 unemployed young persons are already attending the schools, which are keeping in touch with employers in order that their pupils may be enabled to enter industry as vacancies occur.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

---

### The Labour Market, Strikes, Prices.

#### The Labour Situation.

Employment at the beginning of June showed a further large increase, continuing the upward movement indicated in the preceding month. The expansion, which was of a general character, caused the situation to be more favourable than in any period since December, 1920.

At the beginning of June, the percentage of unemployment among members of the trade unions was 4.5 as compared with 4.6 at the beginning of May and with 8.7 at the beginning of June, 1920.

The Employment Service of Canada reported a gain in the daily business transacted during May 1923 as compared with a year ago, while a slight decline in the number of vacancies offered during the month as compared with April 1923 was reported. Placements during the month under review continued on the upward trend.

The following is a brief survey of employment conditions at the end of June 1923 as noted by the Superintendents of the offices of the Employment Service of Canada.

Increased activities in the farming and construction groups were reported from the Maritime Provinces with numerous vacancies available for carpenters, bricklayers, road construction labourers and farm hands. Considerable summer logging was under way near Sydney and in Northern New Brunswick and a number of workers were placed in employment in this group. There was a strong demand for trained domestic workers with a slight shortage in applicants.

Employment conditions in Quebec showed little alteration at the end of

June as compared with reports for May. A brisk demand for farm workers was reported with shortage of applicants, especially in Montreal. The logging group continued to absorb numbers of workers and placements of men in camps in Northern Quebec and Ontario were frequent. Briskness in demand in the building trades was shown with many public buildings and residences being erected. Road construction and railway maintenance work was active and provided employment for many. The reports indicate that the manufacturing industries were active especially the metal trades, textiles and clothing industries. An increase in work along-shore was indicated from Montreal, Quebec and Three Rivers.

In Ontario the demand for farm help and fruit pickers continued in excess of the supply, while outdoor work of all kinds was available for all who desired it. In most centres the building under way was sufficient to employ all local tradesmen and labourers, while road construction and steam and electric railway repair work continued to provide employment for a large majority. River drivers were placed in small numbers in northern Ontario while many workers for saw mills, and pulp and paper mills, were required. At Cobalt skilled and unskilled workers for the mines were greatly in demand. The manufacturing industries were very active with a normal demand for workers. The greatly increased demand for maids, waitresses and cooks, was due to the orders from summer hotels and resorts in addition to the normal requirements from city homes.

In Manitoba there was a slight falling off in the demand for farm work-

ers but a high percentage of placements was maintained. Building tradesmen and mechanics were employed and little change was reported in this group. Railroad construction and maintenance work showed a decided betterment.

In Saskatchewan the orders from farmers continued in large numbers thought not so many as during the early part of April and during May. Numerous opportunities were offered for employment in the building trades, road and highway construction, and on railway maintenance work. Owing to the shortage of trained household workers few of the offices were able to meet the growing demand for cooks, maids and housekeepers.

In Alberta no material change was noted in employment conditions. With good prospects for the crop the demand for farm help showed slight increase. Activities in the construction group were not great, residential construction providing the bulk of employment. Near Edmonton some loggers and saw mill workers were placed, while the mines near Lethbridge and Drumheller were reported as active.

Placements of loggers and sawmill workers in British Columbia continued fairly brisk in some localities. Little construction was under way at the end of the month and a considerable number of carpenters, painters and building mechanics, were available for employment. The demand for farm help continued about the same as formerly reported, while little change was shown in mining. Casual jobs and longshore work gave employment to numbers of men on the Coast.

#### EMPLOYERS' REPORTS

A further marked increase in employment was reported by employers of labour to the Dominion Bureau of Statistics at the end of May, when greater activity was indicated than at any period in 1922 and 1921. Practically all industries contributed to the gains which, however, were greatest in construction, manufacturing and transportation. The level of employment in all provinces was higher than in April, Quebec firms registering the most extensive gains. The improvement in Ontario and the Prairie provinces was also pronounced, while in the Maritime district and British Columbia the expansion was on a rather smaller scale. Increased activity was recorded by firms in the six cities for which separate tabulations are made. In Montreal, where over 7,000 persons were added to the staffs of the employers reporting, the greatest improvement was indicated in shipping and stevedoring and construction, while gains were also shown in manufacturing and trade. The expansion in Toronto, which was on a much smaller scale, occurred chiefly in construction, trade and transportation. Sawmills, pulp and paper factories registered the bulk of the increase in Ottawa, although there was also considerably increased activity in construction. General but moderate improvement was indicated in Hamilton and Winnipeg, the largest gains in both cities being reported in construction. In Vancouver sawmills and rolling mills were busier and expansion was also recorded in construction and in several other industries. Practically all groups within the manufacturing division except leather, textiles and musical instruments reported improvement. The increases in payroll in sawmills, iron, steel, fish canning, pulp and paper factories were especially pronounced. Fruit and vegetable canneries, biscuit, tobacco, glass and

electric current works were decidedly busier, as were also smelters and refineries. The losses in boot, shoe, garment, thread, yarn and cloth factories were largely of a seasonal character. River driving operations caused employment in logging to show some temporary recovery from the heavy seasonal contractions recently recorded, the late spring having delayed this work to some extent. Mining, transportation and construction reported considerably increased activity, the last named industry in particular absorbing a very large number of workers. The employment afforded in communication, in hotels and in trade also increased, although the gains were rather less than in the above mentioned industries. The level of employment in all groups was higher than at the same period of last year.

An article elsewhere in this issue gives the employment situation during May in some detail.

#### TRADE UNION REPORTS

The improvement registered at the end of May as shown by the reports tabulated from 1,426 labour organizations with an aggregate membership of 156,939 persons was very slight, the percentage of unemployment standing at 4.5 as compared with percentages of 4.6 at the end of April and with 8.7 on May 31, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting). In all districts, with the exception of New Brunswick and Quebec, more employment was shown

than in the previous month. Between season dulness in the garment trade in Quebec caused employment in that province to be on a considerably lower level. In comparison with the returns for the end of May, 1922, improvement was registered in every district except Alberta where considerable unemployment was reported in the coal mines. Returns were received from 386 unions in the manufacturing industries with an aggregate membership of 46,861 persons 4,298 of whom were out of work, a percentage of 9.2 as compared with 3.7 per cent at the end of April and with 15.0 per cent at the close of May, 1922. The increase in unemployment over April was principally due to lessened activity for garment workers in Montreal though match makers, metal polishers and glass bottle blowers also reported a number of idle members and tobacco workers were much better employed and improvement in lesser degree was reported by printing and publishing tradesmen and furniture workers. Employment in the iron and steel group as a whole was on the same level as in April but fluctuations were reported within the group. Boilermakers, machinists, moulders and patternmakers were more active but railway carmen and sheet metal workers were not quite so fully engaged and the volume of unemployment among blacksmiths was the same as that reported at the end of April. In comparison with the returns for May, 1922, employment in the manufacturing industries was on a higher level. Nova Scotia and Alberta coal miners reported more activity than in the previous month. In the British Columbia coal fields no unemployment was registered. A better situation prevailed among coal miners than in the same period of last year. Quarry workers in Nova Scotia and asbestos miners in Quebec reported no idleness at the end of May of this year. Improvement continued to be registered in the building trades during the month under review by the 181 unions from which reports were received.

ed. Steam shovel and dredgmen, bridge and structural iron workers, plumbers and steamfitters and hod carriers and building labourers were busier and improvement was also reported by bricklayers, masons and plasterers, carpenters and joiners, electrical workers and painters, decorators and paperhangers. Granite and stonecutters and tile layers, lathers and roofers, however, were not so busy. All tradesmen with the exception of tile layers, lathers and roofers were more fully engaged than at the end of May, 1922. More favourable conditions than in the previous month prevailed in the transportation industries owing to increased employment for workers in the shipping and stevedoring division and among steam and street and electric railway employees. In the steam railway group where reports were received from 516 unions with a membership of 41,874 persons all workers were slightly better employed than in April. In comparison with the returns for May of last year improvement was registered in all divisions of the transportation group. The situation in retail trade was slightly better than at the close of April. Fishermen reported no unemployment as compared with percentages of 20.2 in April and 37.7 in May of last year. Lumber workers and loggers were slightly better employed than at the end of April but the percentage out of work was greater than at the close of May, 1922. Hotel and restaurant, and theatre and stage employees were not quite so active as in the previous month but employment for barbers and stationary engineers and firemen was in slightly greater volume.

#### EMPLOYMENT OFFICE REPORTS

During the month of the Employment Service May 1923 the offices of the Department of Labour made 42,006 references to positions and effected a total of 40,493 placements. Of the latter, the placements in regular employment numbered 30,174 (of which

27,012 were of men and 3,162 of women) while placements in casual work totalled 10,319. The number of applications for work registered at the offices was 38,166 from men and 11,001 from women, a total of 49,167. Vacancies reported to the offices totalled 47,297, of which 35,948 were for men and 11,349 for women. The reports indicate a decline in the number of vacancies reported during the period as compared with the previous month while applications remained fairly constant. Placements, however, show a marked increase, the majority being in farm work on the Prairie Provinces.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during May showed a slight increase of only .3 per cent compared with the figures for April and compared with May, 1922, there was a slight decline of .8 per cent. The estimated value of the permits issued during the month was \$17,593,615 as compared with \$17,544,061 in April and with \$17,743,216 in May, 1922.

According to the *Canadian Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded during May amounted to \$40,697,200 as compared with \$30,843,800 in April, and with \$34,827,300 in May of last year. There was, therefore an increase of 31.9 per cent in the former and 16.8 in the latter comparison. Of the total for the month under review \$1,099,900 or 2.7 per cent was to be spent in the Maritime provinces; \$32,595,500 or 80 per cent in Quebec and Ontario, and \$7,001,800 or 17.1 per cent in the Western Provinces. A further analysis of the total for the month shows that \$14,897,100 was to be spent on residences, \$8,555,000 on business establishments, \$3,763,700 on industrial buildings and \$13,481,400 on engineering contracts.

PRODUCTION  
REPORTS

The Dominion Bureau of Statistics reports that the output of pig iron during May amounted to 101,533 tons which was the largest output since October 1920 when 104,774 tons were produced. The increase for May over the previous month was 17,656 tons; in April the increase was 18,580 and in March 21,047. The May production was more than four times greater than the output of 23,363 tons in May, 1922. Comparative statistics for the corresponding month of several previous years are as follows: 1919-74,000 tons; 1920-87,000 tons; and 1921-56,000 tons. The average production in May for the five years ending with 1920 was 87,152 tons. The cumulative production during the first five months of the present year was 335,696 tons representing an advance of 172,272 tons over the output of the same month last year. The figures for the corresponding period in several years are as follows: 1919-409,636 tons; 1920-418,310 tons; 1921-254,394 tons. During May increases were recorded in practically all the different grades produced. Basic pig iron for further use by the producing firms increased from 52,792 tons to 61,714 tons; foundry iron for sale from 22,839 tons to 23,242 tons; and malleable iron for sale from 6,098 tons to 15,656 tons. The output of ferro-alloys during May was 2,289 tons as compared with 2,258 tons in April. One additional furnace was in operation during the month resulting in a total of ten furnaces in blast.

The production of steel in May was 104,079 tons (99,691 tons steel ingots and 4,388 tons steel castings), as compared with 92,598 tons in the previous

month and with 17,000 tons in May of last year. The May production was nearly double the average production for the same month in the three years 1920 to 1922, computed as about 53,000 tons. The cumulative steel production in the five months ending May, 1923, was 380,263 tons as contrasted with an output of 144,275 tons during the corresponding period of 1922. The comparative output for 1921 was 231,037 tons.

A report from the British Columbia Forestry Branch shows that 245,079,216 feet B.M. of timber was scaled in the province during May, as compared with 186,775,604 feet in May, 1922. The total for May, 1923, includes: Douglas fir, 125,654,257 feet; red cedar, 51,614,309 feet; hemlock, 33,219,532 feet; spruce, 10,293,118 feet; balsam, 5,724,564 feet; yellow pine, 6,739,822 feet; white pine, 4,377,548 feet; jack pine, 2,935,090 feet; larch, 4,214,579 feet; cotton wood, 276,079 feet; and other species, 30,318 feet. .

The gross earnings of the Canadian National Railways (including Grand Trunk Railway and electric lines) according to a preliminary statement issued, amounted to \$20,968,000 in May as compared with \$20,239,921 in April, 1923. The gross earnings for the first five months of 1923 amounted to \$93,946,908.

The gross earnings of the Canadian Pacific Railway for May were given in a preliminary statement as \$14,355,539 in comparison with \$13,664,246 in the previous year; and for the five months ending May 31, 1923, as \$65,901,575 as compared with \$62,484,911 for the same period in 1922.

### Strikes.

The time loss due to industrial disputes reported to the Department during June was less than during either May, 1923, or June, 1922. There were in existence at some time or other during the month 25 disputes, involving 6,908 employees and a time loss of 55,609 working days, as compared with 35 strikes in May, involving 4,732 employees and a time loss of 65,838 working days. In June, 1922, there were recorded 25 disputes involving 11,093 employees with an estimated time loss of 263,402 working days. At the beginning of June there were on record 16 disputes, involving 1,744 employees. Nine new disputes commenced during June involving 5,164 employees with a time loss of 17,343 working days. Three of the strikes commencing prior to June and five of those commencing during June terminated during the month. At the end of the month, therefore, there were 17 disputes involving 4,514 employees.

### Prices.

In wholesale prices the general level was little changed, increases in some articles being offset by decreases in others as indicated by index numbers calculated by various authorities. The index of the Dominion Bureau of Statistics, based on prices of 238 commodities in 1913 was practically unchanged at 155.1 for June as compared with 155.0 for May and 150.5 for June last year. The chief changes for the month were increases in textiles and wood products with decreases in grains and hogs. In the grouping according to purpose, building materials were up owing chiefly to an advance in lumber from 165.7 in May to 170.6 in June. The raw material group was down from 147.9 to 147.2 and the manufactured articles group was down from 160.0 to 158.4. The index number calculated by the Canadian Bank of Commerce, based on prices 1909 to 1913 as 100, was only

slightly changed, that for imported goods, 24 articles, was down from 167.92 to 167.53 and that for exported goods, 24 articles, from 153.83 to 153.78. Professor Michell's index number of forty articles, twenty foods and twenty manufacturers' goods based on prices 1900 to 1909 as 100, was slightly lower for both groups, the former being down from 186.7 to 186.4 and the latter from 171.5 to 167.9.

The index number of wholesale prices in Canada based upon prices of 271 articles in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 225.9 for June as compared with 228.5 in May; 224.3 in June, 1922; 242.6 in June, 1921; 356.6 in May, 1920 (the peak); and 135.3 in June, 1914. Nearly all the groups were down and there was a steep decline in fresh fish but substantial increases occurred in raw cotton and wool.

The decline in average retail prices of foods which began in April continued, the figures for June being lower than for May owing chiefly to a seasonal fall in the prices of dairy products. The average cost of a list of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.23 at the beginning of June as compared with \$10.36 for May; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); and \$7.49 for June, 1914. Butter, eggs, and cheese were substantially lower, with smaller declines in evaporated apples and sugar. The principal advances were in potatoes and beef and less important advances occurred in fresh pork, veal, mutton, and bread. The total budget including food, fuel, and rent averaged \$20.72 for June; \$20.90 for May; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.92 for July, 1920 (the peak); and \$14.27 for June, 1914. In fuel coal, both anthracite and bituminous, averaged slightly lower. Rent was practically unchanged.

## CANADIAN IMPORTS AND EXPORTS DURING MAY, 1923.

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of May, 1922 and 1923, and for the two months ending May of these years, and the exports domestic and

foreign, of similar classes of goods for the same periods.

The following table shows the imports, free and dutiable, and the exports domestic and foreign, of the various classes of products, for the month of May, 1923:—

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
Agricultural and vegetable products, mainly foods	\$ 2,829,147	\$ 9,559,453	\$ 22,164,256	\$ 80,745
Agricultural and vegetable products, other than foods	3,312,329	3,329,615	2,702,470	135,686
Animal and animal products.....	2,068,828	1,826,119	9,057,988	33,300
Fibres, textiles and textile products.....	6,359,757	8,660,600	897,208	152,277
Wood, wood products and paper.....	1,650,667	2,045,681	22,549,600	39,396
Iron and its products.....	1,714,180	16,422,479	5,466,056	295,723
Non-ferrous metals and their products.....	1,487,098	2,722,180	6,349,123	64,303
Non-metallic minerals and products.....	6,866,526	6,760,359	2,424,655	57,623
Chemicals and allied products.....	1,113,598	1,487,356	1,468,998	15,696
Miscellaneous commodities.....	1,825,190	2,224,104	1,734,200	359,947
Totals .....	29,227,320	55,037,946	74,814,554	1,234,703

In May, 1923, the duty collected amounted to \$12,501,893 as compared with \$11,750,662 in May, 1922.

The following comparative table shows the values of merchandise enter-

ed for consumption and the merchandise, domestic and foreign, exported in the months of May, 1922 and 1923, and in the two months ending May of these years respectively:—

	Month of May		Two months ending May	
	1922	1923	1922	1923
Merchandise entered for consumption.....	\$ 66,121,374	\$ 84,265,266	\$ 113,816,823	\$ 152,446,586
Merchandise, domestic, exported.....	69,146,171	74,814,554	101,063,671	128,456,805
Total .....	135,267,545	159,079,820	214,880,499	280,903,391
Merchandise, foreign, exported.....	1,312,549	1,234,706	2,047,090	1,920,531
Grand total, Canadian trade.....	136,580,094	160,314,526	216,927,589	282,823,922

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JUNE, 1923.

---

**D**URING the month of June, the Department received a report of the Board of Conciliation and Investigation established to deal with a dispute between the Winnipeg Electric Railway Company and certain of its employees, being members of the Gas Workers' Union of Winnipeg (Independent).

### Applications received.

During the month two applications for the establishment of Boards of Conciliation and Investigation were received as follows:

(1) From employees of the Hollinger Consolidated Gold Mines, Limited, Timmins, Ontario, McIntyre Porcupine Mines, Limited, Schumacher, Ontario, and Dome Mines Company, Limited, South Porcupine, Ontario, being miners, members of Porcupine Mine Workers' Union. A Board was established, and Mr. Thomas E. Ryan, South Porcupine, Ont., was appointed a member of the Board on the recommendation of the

employees. Proceedings were under way at the close of the month.

(2) From employees of the Toronto Electric Commissioners being linemen, groundmen, and others concerned in the work of power transmission and distribution, being members of the Canadian Electrical Trades Union, Toronto Branch.

### Other Proceedings under the Act.

In the case of a dispute between the Canadian National Telegraphs and its employees, being members of the Canadian National Telegraphs System Division No. 43, Commercial Telegraphers' Union of America, a Board was completed by the appointment of Mr. F. H. McGuigan, Toronto, chairman, on the joint recommendation of the other members of the Board, Messrs. F. H. Markey, K.C., Montreal and David Campbell, Winnipeg, nominees of the employers and men respectively.

### Report of Board in Dispute between the Winnipeg Electric Railway Company and certain of its employees being members of the Gas Workers' Union of Winnipeg.

A report was received from the Board established to deal with the dispute between the Winnipeg Electric Railway Company and certain of its employees, being members of the Gas Workers' Union of Winnipeg (Independent). The Board was composed as follows: Rev. Dr. Charles W. Gordon, Winnipeg, chairman, appointed on the joint recommendation of the other two members of the Board, Mr. W. J. Fulton, Winnipeg, appointed by the Minister in the absence of a recommendation from the employer, and Mr. R. S. Ward, Winnipeg, nominee of the em-

ployees. The report was unanimous and a settlement was effected on the terms suggested by the Board.

The text of the report is as follows:

#### Report of Board.

Winnipeg, May 31st, 1923.

Upon the request of the Independent Gas Workers' Union of Winnipeg, the Minister of Labour appointed a Board of Conciliation and Investigation to inquire into a dispute between that organization and the Winnipeg Electric Railway Company.

Mr. Robert S. Ward was appointed to represent the Union, Mr. Walter J. Fulton as representative of the Company, and Dr. Charles W. Gordon as Chairman of the Board.

The first meeting of the Board was held April 17th, 1923. In all, eleven private meetings of the Board were held and eight interviews with the parties involved, in addition to eight interviews between the Chairman and representatives of the management of the company and the committee representing the union.

The investigation was delayed by the absence from the city of the Vice-President of the Company and later by the absence of the Chairman of the Board and of Mr. Fulton, the company's representative.

The report of the Board is as follows:

The investigation appeared to establish the following facts:

(1) The primary occasion of friction between the parties appears to have been the operation of a seniority list, published January 23rd, 1923, effective February 1st, the men claiming that in the compilation of this list the seniority rights of a number of employees were ignored, and the company claiming that the list was carefully and correctly prepared, with due regard to priority of employment and other considerations affecting the service.

(2) This seniority list was put into operation so as to synchronize with the reorganization of the work at the gas plant, a reorganization which rendered necessary changes in the status of certain of the employees.

(3) As a result of the operation of the seniority list and the reorganization of the staff, important changes were made in the work and wage of the two men involved in this case, Hector being transferred from the gallery to the yard, which transfer involved a change in wages from 60 to 45 cents per hour, and Winkworth transferred from the posi-

tion of Back Door Man to that of Pipe Jumper, a work which after three weeks' trial the foreman declared him incapable of performing.

(4) On February 20th, Hector, in making complaint to the Superintendent as to his change of work and reduction of wage, made use of what the Superintendent declared to be threatening language, although this was denied by Hector.

(5) On the same day Hector was called into the office and dismissed from the employ of the company.

(6) On the afternoon of February 22nd, the foreman announced to Winkworth that he was incapable of the work of pipe jumping, and dismissed him from the employ of the company.

(7) Learning of the dismissal of these men, their fellow-workmen proceeded in a body to the office of the Superintendent, who received a committee of them. Later the matter was taken up formally by the union. Conferences were held between the parties, without satisfactory result, and finally, upon request of the union, the Board of Conciliation and Investigation was constituted.

In presenting their case before the Board, the union formally charged the company with discrimination against the two men, because of their official connection as President and Secretary of the union, and with deliberate intent and conspiracy to injure the union in this way.

The Board, while of the opinion that the data submitted in support of this charge might be so interpreted as to give ground for the charge, was able to point out that this data was capable of an interpretation that would relieve the company of such a charge. Upon this being pointed out, the union frankly withdrew the charge of conspiracy.

The case of the dismissal of each of the men was then considered upon its merits.

While recognizing the possibility of such an interpretation of the data presented as would justify the dismissal of Hector, the Board came to the opinion that, inasmuch as Hector strongly denied, backing his denied with an affidavit, that he used the words complained of, and, inasmuch as the words themselves were capable of such interpretation as would relieve them of sinister and threatening meaning, the company should be asked to reconsider this case.

In the case of Winkworth, the Board came to the opinion that even though he might have appeared to be incapable of doing full justice to the work of pipe jumping, the company, in accordance with its usual practice in dealing with employees of long standing, might be able to assign him such work as he would be capable of doing. The Board therefore requested the company to consider whether such an arrangement might not still be made.

After many and prolonged conferences the company accepted the suggestion of the Board in the case of each of these men.

The Board is glad to be able to announce therefore that the following satisfactory solution and settlement of the case was agreed upon:

"The Union withdraws the formal charge of conspiracy against the Union on the part of the Company.

"The Union further pledges itself to use its best endeavours, as an organization and as individuals, to promote harmony between the employees and the Company, and to do all that is possible to carry on the work assigned them in an efficient and satisfactory manner.

"The Company agrees that Hector shall be re-employed by the Company in a Department other than that of the Gas Works at a wage as near as possible to that which he obtained as Scurfer.

"The Company further agrees that Winkworth shall be reinstated, with seniority rights, and employed in the service of the

Company in such work as may be suited to his ability, and that he shall receive wages for one month of the time during which he was under discharge by the Company, at the rate at which he was formerly employed."

In regard to the Seniority List, the Board suggests that the present list, as establishing the status of employees in the Company's service, shall be generally accepted, and that any complaint in connection therewith shall become a matter of conference between the Management and a Committee of the employees, care being taken to safeguard, on the one hand, the rights of employees as to priority of employment, and, on the other, the prerogative of the Company in such matters as efficiency and the necessities of the service.

On behalf of The Winnipeg Electric Railway Company:

(Sgd.) JOHN WHITSELL,  
Manager.

On behalf of The Independent Gas Workers' Union of Winnipeg:

(Sgd.) A. HICKLING,  
Vice President,  
S. WINSER,  
2nd Vice President.

The Board desires to record its gratification at the spirit shown by all parties at the various conferences held and the absence of all bitter feelings and recrimination, and expresses the hope that from this time forward the utmost harmony may prevail between the parties and the fullest co-operation in providing the community of Winnipeg with a necessary and important service.

SIGNED by members of the Board of Conciliation and Investigation.

(Sgd.) CHARLES W. GORDON,  
Chairman,

R. S. WARD,  
Representative of the Union,  
WALTER J. FULTON,  
Representative of the Company.

## STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1923.

THE number of strikes and lockouts in progress in Canada at some time during the month of June was ten less than in May, and while about 2,000 more employees were involved the result was a time loss of about 10,000 less working days than in May, when out of the 35 disputes in progress 16 were terminated and these had involved 2,606 employees. The time loss for June was also greatly less than in June 1922, when the strike of approximately 7,000 coal miners in Alberta had contributed mainly to a time loss of 263,402 working days.

Date	Number of disputes	Number of employees involved	Time loss in working days
June, 1923.....	25	6,908	55,609
May, 1923.....	35	4,732	65,838
June, 1922.....	25	11,093	263,402

Sixteen disputes involving 1,744 workpeople were carried over from May. Three of the sixteen strikes commencing prior to June and five of the eight commencing during June terminated during the month. At the end of June, therefore, there were on record 17 strikes: coal miners, Canmore, Alberta; clothing workers, Toronto; pulp and paper workers, South Devon, N.B.; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; steel workers, Sydney; builders' labourers, Quebec; motormen and conductors, Niagara Falls and seamen, Vancouver.

Information was received in the Department during June relating to a

strike of clothing workers at Toronto which commenced on April 17, and involved 25 employees and was still in progress during June, which did not appear in previous issues of the LABOUR GAZETTE.

Three disputes listed in the statistical table were reported in June to have terminated prior to June 1, and had not previously been so reported in earlier issues of the LABOUR GAZETTE.

Of the eight disputes which terminated during the month, two involving 1,900 employees, terminated in favour of the employees and six, involving 494 employees, were terminated by compromises. Of the eight disputes commencing during the month, five involved demands for increased wages, two were against the laying off of employees and one was in sympathy with one of these two.

The industries chiefly affected by disputes were: Printing and Publishing, where 10 disputes involved 833 employees, causing a time loss of 21,658 days; Construction, where four disputes involved 516 employees and a time loss of 12,494 days; Coal Mining, three disputes involved 2,213 employees and a time loss of 9,768 days; Iron and Steel Manufacturing, one strike, 2,700 employees, time loss of 8,100 days. Saw and Planing mills, one strike, 380 employees, 3,040 working days.

The most important industrial disturbance during the month was a strike of employees in steel plants at Sydney, N.S., on June 28, reported to be involving upwards of 3,000 employees, for increased wages, the 8-hour day, and recognition of the union, and the adoption of the check-off. Early in July some 10,000 coal miners, chiefly employees of the corporation operating the

steel plants, entered on a sympathetic strike, objecting to the presence of military forces in the district affected by the strike, these forces being been, however, requested by the local authorities under the provisions of the Militia Act.

The record of the Department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

Information was also received in the Department relating to disputes causing interruptions to industry during May and June, which were not strikes as above defined. On June 1, four carpenters went on strike at Pembroke demanding a renewal of the previous year's agreement. This dispute remained unterminated at the end of June, but as the number involved was less than six employees it is not included in the detailed table. On May 30, some 22 civic employees at St. John's, Que., went on strike demanding that the wages be increased from 30 cents per hour to 40 cents per hour. On May 31, six men returned to work while the places of the others were filled, work being resumed at 30 cents per hour. On June 7, 50 corporation labourers at Kingston ceased work demanding an increase in wages from 35 cents per hour to 40 cents per hour. A compromise was effected, work being resumed on June 8, one-half day being the duration of the strike.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**RAFTING CREW, SOUTH DEVON, N.B.:**—Thirty-seven members of a rafting crew in the employ of a pulp and paper company at South Devon, N.B., ceased work on June 26, for an increase in wages. The prevailing rates had been \$2 to \$2.50 per day with board and \$2.70 to \$3.25 per day without board. The rates demanded were \$2.50 to \$3 per day, with board, and \$3.25 to \$3.75 per day without board. This strike remained unsettled at the end of June.

**COAL MINERS AT SYDNEY MINES:—**Coal miners, 750 in number, went on strike on June 12 for the reinstatement of employees laid off, the reason given by the employing company being that staff reduction was necessary. On June 14, 1,150 coal miners employed by the same company in another mine went on strike in sympathy, and miners in other collieries threatened to go out. The company re-instated the employees laid off pending a settlement with the executive of the union and work was resumed on the second shift on June 15.

**COAL MINERS, CANMORE, ALTA.:**—A strike of coal miners occurred on June 18, against the discharge of certain employees. This strike remained unsettled at the end of June, but information received indicates it was terminated early in July.

**COAL MINERS, MACCAN, N.S.:**—This strike for increased wages was settled by the granting of part of the increase demanded.

**PRINTING TRADES IN TEN CITIES:**—The strike of printing trades in job offices in various cities, which began in the spring and early summer of 1921 for the 44-hour week, was still in progress in ten cities and involved 833 employees, as compared with 2,355 at commencement of July, 1921, 2,365 in De-

## STRIKES AND LOCKOUTS DURING JUNE, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to June, 1923.			
MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Macan, N. S.	33	858	Commenced May 23, for increased wages. Settled June 30, work resumed June 2, part of the increase demanded being granted.
MANUFACTURING—			
<i>Vegetable foods, drink and tobacco:</i>			
Brewery workers, Toronto, Ont.	.....	.....	Commenced April 16, against introduction of open shop conditions, information received indicates strikers' places had been filled, prior to June 1.
<i>Clothing:</i>			
Clothing workers, Montreal, Que.	.....	.....	Commenced May 11, for recognition of union. Information received indicates employment conditions no longer affected by June 1st.
Clothing workers, Toronto, Ont.	25	650	Commenced April 17, for recognition of union. Underminated.
Rubber workers, Montreal, Que.	.....	.....	Commenced April 24, for recognition of union. Information received indicates employment conditions no longer affected, by June 1st.
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que.	7	182	Commenced May 2, 1921 for shorter hours. Underminated.
Printing compositors, Hamilton, Ont.	10	260	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Underminated.
Printing compositors, Montreal, Que.	10	260	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Underminated.
Printing compositors, Montreal, Que.	140	3,640	Commenced July 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Montreal, Que.	12	312	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Underminated.
Printing compositors, Toronto, Ont.	361	9,386	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Winnipeg, Man.	157	4,082	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Underminated.
Printing compositors and pressmen, Halifax, N. S.	38	968	Commenced May 2, 1921 for shorter hours with same weekly wages. Underminated.
Printing compositors and pressmen, Ottawa, Ont.	87	2,262	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors and pressmen, Vancouver, B. C.	11	286	Commenced May 2, 1921, for increased wages and 44-hour week. Underminated.
<i>Saw and planing mills:</i>			
Mill workers, St. Romuald, Que.	380	3,040	Commenced May 23, for increased wages. Settled by negotiations June 11, a part of the increase demanded being granted.

## STRIKES AND LOCKOUTS DURING JUNE, 1923, (continued)

Industry, occupation and locality	employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to June, 1923—(Continued).			
<b>CONSTRUCTION—</b>			
<i>Building</i>			
Builders' labourers, Quebec, Que.	450	11,700	Commenced May 1, for increased wages. Underminated.
Plasterers and cement finishers, Halifax, N. S.	14	126	Commenced May 1, increased wages. Settled by negotiations June 12, a partial increase being granted.
<b>TRANSPORTATION—</b>			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	9	234	Commenced July 2, 1922, for recognition of union. Underminated.
(b) Strikes and lockouts commencing during June, 1923.			
<b>LOGGING—</b>			
Rafting crew, pulp and paper South Devon, N. B.	27	185	Commenced June 12, for increased wages. Underminated.
<b>MINING, NON-FERROUS, SMELTING AND QUARRYING—</b>			
Coal miners, Canmore, Alta.	280	3,360	Commenced June 18, against the discharge of employees. Underminated.
Coal miners, Sydney Mines, N. S.	750	2,250	Commenced June 12, against laying off employees. Settled by negotiations June 15. Employees reinstated.
Coal miners, Sydney Mines, N. S.	1,150	2,300	Commenced June 14, in sympathy with coal miners on strike since June 12. Strike called off June 15.
<b>MANUFACTURING—</b>			
<i>Iron, Steel and Products:</i>			
Steel workers, Sydney, N. S.	2,700	8,100	Commenced June 28, for increased wages, the 8-hour day and check-off system of collecting union dues. Underminated.
<b>CONSTRUCTION—</b>			
<i>Building:</i>			
Bricklayers' helpers, Quebec Que.	40	560	Commenced June 1, for increased wages. Settled by negotiations June 17, part of the increase demanded being granted.
<i>Miscellaneous construction:</i>			
Hoisting engineers, Victoria, B.C.	12	108	Commenced June 11, for increased wages. Several conferences were arranged by Fair Wages Officer of the Department of Labour, work resumed June 20, a part of the increase demanded being granted.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>			
<i>Water transportation:</i>			
Seamen, Vancouver, B. C.	180	360	Commenced June 29, for increased wages. Underminated.
<i>Public Utilities:</i>			
Linemen, Electric Light and Power, London Ont.	15	120	Commenced June 9, for increased wages and shorter hours. Settled by negotiations June 20, a part of the increase demanded being granted.

cember, 1921, and 1,585 in December 1922.

**MILL WORKERS, ST. ROMUALD, QUE.:** — The strike of 380 mill hands which commenced May 23, terminated June 11. A compromise was effected work being resumed at \$2.25 per day, an increase of 25 cents per day, instead of \$2.50 per day as demanded.

**PLASTERERS AND CEMENT FINISHERS, HALIFAX, N.S.:** — This strike for an increase in wages from 75 cents to \$1 per hour on May 1, was terminated on June 12 by the granting of 90 cents per hour for work on new contracts and 75 cents per hour on uncompleted contracts.

**BRICKLAYERS' HELPERS, QUEBEC:** — This strike for an increase in wages from 35 cents per hour to 50 cents per hour on June 1, was terminated by negotiations on June 17, work being resumed at 40 cents per hour.

**HOISTING ENGINEERS, VICTORIA, B.C.:** — On June 11, 12 hoisting engineers in

the employ of two firms went on strike for increased wages from \$6 to \$7 per day. After negotiations between the parties, arranged by the Fair Wages officer of the Department of Labour, a settlement was arrived at June 20, when work was resumed at \$6.40 per day.

**SEAMEN, VANCOUVER, B.C.:** — One hundred and eighty seamen went on strike at Vancouver on June 29, demanding an increase of \$20 per month in wages. This strike remained unsettled at the end of the month.

**LINEMEN, LONDON, ONT.:** — On June 9, 15 linemen in the employ of the Public Utilities Commission of London went on strike for an increase in wages from 66 cents per hour to 82 cents per hour with a reduction in hours per day from nine to eight. On June 20, the strikers' places were filled with new employees at 70 cents per hour for a 9-hour day in summer and an 8 hour day in winter.

---

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING MAY, 1923.

**T**HE British *Ministry of Labour Gazette* for June contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during May, 1923, based upon returns from employers and workpeople.

### NUMBER, MAGNITUDE AND DURATION.

—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in May in Great Britain and Northern Ireland, was 49, as compared with 52 in the previous month, and 38 in May, 1922. In these new disputes 15,000 workpeople were directly involved and 3,000 indirectly involved (i.e., thrown out of

work at the establishments where the disputes occurred though not themselves parties to the disputes). In addition 30,000 workpeople were involved, either directly or indirectly, in 41 disputes which began before May, and were still in progress at the beginning of that month. The number of new and old disputees was thus 90, involving 48,000 workpeople, and resulting in a loss during May of 807,000 working days.

**CAUSES.** — Of the 49 disputes beginning in May, 18, directly involving 3,000 workpeople, arose out of proposed reductions in wages; 9, directly involving 2,000 workpeople, on demands for advances in wages; 6 directly in-

volving 2,000 workpeople, on details of working arrangements; 7, directly involving 6,000 workpeople, on questions of unionism and non-unionism; and 9, directly involving 2,000 workpeople, on other questions.

**RESULTS.** — Settlements were effected during May in the case of 16 new disputes, directly involving 7,000 workpeople, and 13 old disputes directly involving 2,000 workpeople. Of these new and old disputes, 8, directly involving 4,000 workpeople were settled in favour of the workpeople; 9, directly involving 2,000 workpeople, in favour of the employers; and 12, directly involving 3,000 workpeople were compromised. In the case of 5 disputes, directly involving 2,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in May in Great Britain and Northern Ireland by groups of industries:—

Groups of industries	Number of disputes in progress in May			Number of workpeople involved in disputes in progress in May	Aggregate duration in working days of all disputes in progress in May
	Started before May 1	Started in May	Total		
Mining and quarrying.....	1	9	10	11,000	74,000
Metal, engineering and shipbuilding	8	10	18	28,000	588,000
Textile .....	1	2	3	3,000	59,000
Printing, paper, etc., trades.....	7	....	7	1,000	18,000
Chemical, glass, etc. ....	4	3	7	1,000	16,000
Food, etc., trades..	5	....	5	2,000	24,000
Other trades.....	15	25	40	2,000	28,000
Total May, 1923.	41	49	90	48,000	807,000
Total April, 1923.	38	52	90	110,000	1,077,000
Total May, 1922.	55	38	93	*382,000	7,879,000

\*Disputes involving about 350,000 workpeople in the engineering and shipbuilding industries were in progress in May, 1922.

## THE GOVERNING BODY OF THE INTERNATIONAL LABOUR OFFICE.

**T**HE nineteenth session of the Governing Body of the International Labour Office was held at Geneva on 12 and 13 June under the chairmanship of Mr. Arthur Fontaine. Among the delegates present was Mrs. Carruthers (Miss Violet Markman) as substitute for the Hon. ourable James Murdock, Government representative for Canada

The Governing Body discussed and approved the report of the Director on the general work of the Office since the last session.

An exchange of views took place concerning the ratifications of the Draft Conventions adopted at the various sessions of the International Labour Conference. In all, 73 Draft Conventions have been formally ratified by the States Members of the Organisation.

An agreement was reached concerning the preliminary arrangements for the next session of the International Labour Conference, which is to be held at Geneva in October 1923.

The Governing Body approved the estimates for 1924 submitted by the Finance Committee. These estimates are drawn up with due consideration for the spirit of economy by which the budgets of the various individual countries are characterised at the present time.

The British Government Delegate declared that his Government had supported, and would continue to support, the International Labour Office, and that he was quite certain that the Governing Body would realise that they needed no assurance from him to convince them

that the British Government had no responsibility for certain articles attacking the Office which had appeared in the English Press.

The results of the open competition for the plans for the new premises of the International Labour Office were submitted to the Governing Body. The Director was authorized to negotiate with the architect whose plans were classed first by the jury.

The report of the Committee appointed to submit proposals concerning the steps which should be taken to facilitate the ratification of the Draft Convention limiting hours of work in industrial undertakings to eight in the day and forty-eight in the week was submitted to the Governing Body. In accordance with a proposal of the Workers' Group, the Governing Body decided to postpone to its next session the discussion and vote on the conclusions of the report.

The Mixed Agricultural Committee, consisting of members of the Governing Body of the International Labour Office and members of the International Institute of Agriculture at Rome, which was set up to examine questions which one or other of these organisations might think desirable to submit to it with a view to co-ordinating the work of the two organisations, is to meet in August next. It was decided to submit the following questions to the Committee: vocational education of agricultural workers, co-operation in agriculture, the

prevention of anthrax among flocks; and to bring before the Committee the questions on the agendas of the fifth and sixth sessions of the Conference which may directly or indirectly affect agriculture, in order to give the members an opportunity of submitting their observations.

At the 18th session of the Governing Body it had been decided to convene a conference of representatives of official labour statistical services, with the object of facilitating the scientific study of labour problems and securing the uniformity in labour statistics necessary to render them internationally comparable. It was decided that the agenda of this conference, which is to meet on October 29, 1923, at Geneva, should be as follows:

- (1) Classification of industries and occupations for the purpose of labour statistics;
- (2) Statistics of wages and hours of labour;
- (3) Statistics of industrial accidents.

The Governing Body authorised the Director to convene the Advisory Committee on Industrial Hygiene to consider, from the scientific point of view, certain aspects of the problem of anthrax infection, and to obtain authoritative opinion, before publication, on studies undertaken by the International Labour Office with regard to unhealthy occupations.

The next session of the Governing Body will be held at Geneva on October 15.

## CANADIAN MANUFACTURERS' ASSOCIATION, ANNUAL CONVENTION.

---

THE fifty-second annual general meeting of the Canadian Manufacturers' Association was held at Toronto on June 11 to 14, the president, Mr. John R. Shaw, of Woodstock, Ont., being in the chair.

The membership committee reported that 439 new members had joined during the year ending April 30, 1923, and 423 members had resigned, making a net gain 16, and total membership at the end of the year of 4,288.

### Report of Legislation Committee.

The Legislation Committee made reference to various laws which were enacted or introduced in the House of Commons and the provincial legislatures during the year, and described the action taken with reference to these measures.

Reference was made to the fifth annual meeting of the Conference of Commissioners on Uniformity of legislation in Canada which was held at Vancouver on August 11 to 16, 1922. Among the subjects considered by the Conference or referred to committees for report were mechanics' liens and workmen's compensation.

### Report of Industrial Relations Committee.

Of the subjects dealt with in the Report of the Industrial Relations Committee the most important was the Fourth International Labour Conference held at Geneva in October, 1922, at which the employers of Canada were represented by the Chairman of the Committee, Mr. W. C. Coulter of the Booth-Coulter Copper and Brass Co., Limited, Toronto. The report commented on the fact that the 1922 conference dealt for the most part with questions of internal reform of the constitution

of the International Labour Organization, in particular the question of whether the eight states of chief industrial importance (of which Canada has been declared to be one) should continue to have seats on the Governing Body as of right or this privilege should be given to six arbitrarily named states not including Canada but including the United States. This latter proposal, though at the beginning it bade fair to carry the Conference was finally rejected by a vote of 82 to 2. Canada is thus left with a seat on the Governing Body as of right, in her capacity as one of the eight states of chief industrial importance.

Looking back over the four annual International Labour Conferences that have been held, viz: at Washington in 1919, at Genoa in 1920, and at Geneva in 1921 and 1922, the report pointed out that a very large number of draft conventions and recommendations were passed at the first three conferences, particularly at the Washington Conference in 1919, but that only a small percentage of these had been ratified by the various member nations. The actual figures are some sixty ratifications out of a possible seven hundred. This being the situation it was recognized at the 1922 conference that it would be unwise to proceed to pass further draft conventions and recommendations until there had been a much larger number of ratifications of those already passed.

The report also referred to the agenda of the Fifth Annual International Labour Conference to be held at Geneva in October, 1923.

Another subject dealt with in the Industrial Relations Report was that of "Co-operation in Industry". In Canada as well as in the United States,

recent years have seen a marked growth in the movement towards the establishment of shop committees and industrial councils in particular units of industry. Though some of the more elaborate and highly-artificial systems have not outlived the first enthusiasm and active direction of their founder, many of the more sober and less ambitious programs have proved a striking success. Thus, in many cases in the United States and not a few in Canada, when during the period of deflation, wage reductions became necessary, on the situation being explained to the shop committee, the men's representatives themselves voted in favour of reduction. It will be agreed that no more searching test could be applied of the soundness of the shop committee idea. The scope of authority of shop committees may, of course, range from very restricted to extremely wide powers, the extreme type including in its purview not merely recreation and welfare, so called, but choice of foremen, discipline, dismissal and wages and hours. The great object is, of course, to foster co-operation and good will and to make men think in terms of the industry in which they are employed instead of regarding themselves and their employers as two armed camps set one against the other.

Finally the report drew attention to the question of Industrial Medical Service. In Great Britain and the United States much valuable work has been done in investigating the time loss in industry due to sickness among workers. Careful investigation in Great Britain over a period of years has shown that the time lost through sickness was exactly five times the amount of time lost through accident. To give one concrete example, the total loss of time of 1,200 men engaged in heavy work in a certain district, amounted, from all causes, to 10.5 per cent of possible working hours; over one-half of this or 6.6 per cent was due to sickness. Again, careful statistics

have been prepared which go to show that an average of 2.5 per cent of all United States workers is always unproductive through sickness. If this holds true of Canada it would mean that some 25,000 to 30,000 wage-earners were totally unproductive every year. In these circumstances it is instructive to note that where a system of preventive medicine or industrial medical service has been introduced the most striking results have been achieved. Thus, one American public utility corporation reports after two years of industrial medical service, that the average sickness per man per year was reduced from eight days to a little more than four days. Again, a Canadian company in one year reduced the average lost time through sickness from 6.5 days per man per year to 2.92 days. The way in which this preventive medical service is carried out is, of course, by the employment of doctors specially trained in preventive medicine who do not wait until the disease has developed and the workman is incapacitated, but by observation and advice or immediate simple treatment head off the disease and keep the workmen fit for work. The value of such preventive medical service in dollars and cents as well as from a humanitarian point of view, is being more and more recognized in Great Britain and the United States, and a promising beginning has already been made in Canada.

Questions relating to the customs tariff were dealt with at some length by the convention more particularly with reference to trade with the United States and Great Britain.

#### Resolutions.

The following resolutions were among those passed by the convention:

*Canadian Coasting Laws.*—Whereas the Commission appointed by the Federal Government to investigate certain allegations to the effect that a combine existed among lake carriers, has made its recommendations and

the matter has been placed before the House by the Minister of Trade and Commerce: and

Whereas this report, among other things, recommends that the Governor-in-Council be given power to suspend the coasting laws; and

Whereas such suspension would enable the great United States shipping companies to carry cargoes between Canadian ports while the United States Merchant Marine Act completely prohibits Canadian ships from carrying any cargoes between United States ports; and

Whereas this one-sided arrangement would have the following results:

(1) The operation of Canadian vessels on the Great Lakes would be most seriously restricted.

(2) New vessels would not be constructed, with the result that the Canadian shipbuilding and allied industries would be disastrously affected.

(3) Canadian officers and sailors, and men employed in shipbuilding and allied industries would be deprived of employment in Canada and in order to follow their professions would be obliged to emigrate; and

Whereas it has been recognized for many years that the prosperity and safety of every part of the British Empire depends largely upon the encouragement given to shipping and navigation;

Therefore be it resolved that the Canadian Manufacturers' Association in Annual General Meeting assembled, at Toronto, on June 14, 1923, views with alarm and strongly opposes, on national grounds any suspension of the coasting laws and particularly objects to the proposal to delegate to the Governor General in Council the power to suspend the coasting laws of Canada thus substituting government by Order-in-Council for government by the Parliament of Canada.

*The Shipbuilding Industry.*—Whereas, twenty-six steel ships, specially designed for the Canadian lake trade, have been built recently abroad and are now being delivered to Canadian owners; and

Whereas there is not one steel ship being built in Canadian yards, although there are many well equipped and modern yards between Halifax and Victoria, representing a large investment of capital; and

Whereas this was once a flourishing Canadian industry employing thousands of skilled and unskilled workers; and

Whereas the shipbuilding and ship repairing industry is a natural as well as an essential industry for which Canada is well suited through the capacity of her people and the possession of necessary materials;

Therefore be it resolved that the Canadian manufacturers' Association in annual general meeting assembled, at Toronto, on June 14, 1923, respectfully urge the Dominion Government to appoint a Royal Commission for the purpose of making an investigation into the shipbuilding and ship repairing industry in order to discover what measures are necessary to retain it in Canada.

*Fire Prevention.*—Whereas last year was the worst on record in Canadian history from the point of view of destruction by fire, resulting in the loss of 227 lives and \$43,000,000 worth of property; and

Whereas to these appalling figures must be added the unknown but great loss of life and property from forest fires;

Therefore be it resolved that the Canadian Manufacturers' Association in annual general meeting assembled at Toronto, on June 14, 1923, urge the Dominion, Provincial and Municipal Governments to extend and intensify their fire prevention efforts, and also request its members to do everything possible in their own localities to help bring home to the public the responsibility of every individual citizen to assist in controlling fire and thus to reduce the present heavy loss of life and property.

Honorary officers for the ensuing year were elected as follows:

President — C. Howard Smith, Howard Smith Paper Mills, Ltd., Montreal, Que.

First vice-president—Col. Arthur F. Hatch, Stanley Works of Canada, Ltd., Hamilton, Ont.

Second vice-president—J. H. Fortier, P. T. Legare, Ltd., Quebec, Que.

Treasurer—Thomas Roden, Roden Brothers, Limited, Toronto, Ont.

## RECENT LABOUR LEGISLATION IN CANADA.

---

Outline of certain measures enacted during 1923 (1) by the Parliament of Canada; (2) by the Legislature of Ontario.

**A** BRIEF outline is given in the following pages of the labour enactments and other proceedings in connection with the recent Parliamentary session at Ottawa, and with the recent session of the Legislature of the Province of Ontario.

### Canada.

The second session of the fourteenth Parliament of the Dominion of Canada began on January 31 and continued until June 30. An improvement in the industrial situation in Canada during the past year was noted in the opening Speech from the Throne, the improvement being accompanied by a decrease of unemployment as compared with the previous winter. In regard to the unemployment problem it was announced early in the session that action had been taken by the government to implement the resolution passed by the House on April 24, 1922, "That in the opinion of this House, in view of the widespread unemployment with which the municipalities and provinces find themselves unable to cope, it is desirable that the federal government should devise some means of dealing effectively with the situation". Conferences had been held between the federal government and the provinces, and after careful consideration the government decided that it would not be necessary to adopt any general unemployment relief scheme such as had been in effect during the two preceding winters. However during January and February the government learned that in certain municipalities there was a condition of unemployment particularly affecting returned men, which the municipal and provincial authorities had taken no action to alleviate, the result being that in those

municipalities relief bodies had been formed, composed of returned soldiers' organizations, charitable organizations and other welfare societies, and in some cases, with representatives of municipal authorities on those bodies. It was believed that in such cases it might be advisable for the federal government to assist such organizations, and accordingly an order-in-council (No. 220) was passed on the recommendation of the Minister of Soldiers' Civil Re-Establishment. This order provides that in the case of unemployed ex-service men requiring relief and not being in a position to secure proper assistance from municipal or provincial authorities, but obtaining aid only from the organizations above mentioned, the Federal Government would participate to the extent of paying one-third of the disbursements incurred since January 1, 1923. The government found however, that no need existed for special legislation at the late session to provide generally for the relief of unemployment throughout Canada. ]

### LABOUR DEPARTMENT.

The estimates of the Department of Labour, amounting to \$1,373,000, showed a large decrease from those of the preceding year, due in the main to the discontinuance of the share which had been contributed by the Federal government during the two preceding years towards unemployment relief. No such provision was made for the current year, the government holding that, in view of the improved position any necessary relief should be provided by the provinces and municipalities. ] On the other hand, an addition was made in the estimates to provide for the Old Age Annuities branch which was lately trans-

ferred to the Department of Labour from the Post Office Department.

#### INTERNATIONAL LABOUR CONVENTIONS.

The draft conventions and recommendations of the 1921 session of the International Labour Conference, League of Nations, at Geneva, were presented to the House by the Minister of Labour, who made the following statement with reference to them:

"When the authentic texts of the Draft Conventions and recommendations of the 1921 conference were received from the Secretary-General of the League of Nations they were referred to the Department of Justice for consideration of the question whether the proposals involved were to be regarded as within the Dominion or Provincial legislative competence. The report of the Minister of Justice on this subject was approved by an order-in-council on June 27, 1922 (LABOUR GAZETTE July 1922, pages 696 to 699), and a copy of the order-in-council is attached to the texts of the Draft Conventions and Recommendations for the information of the House. It will be observed that most of the proposals were found to be within Provincial jurisdiction. Copies of the order-in-council of June 27, 1922, and of the authentic texts of the Draft Conventions and Recommendations were transmitted subsequently to the different lieutenant-governors for the consideration of their respective governments with a view to such legislative or other action in line with the proposals involved as each provincial government might be advised to take. The obligations of the government of Canada under the Peace Treaties have thus been fulfilled in respect of the individual measures of the 1921 conference which were found to be within provincial sphere.

"With respect to these Draft Conventions and Recommendations which were found to be within federal legislative competence, the authentic texts are being brought before parliament in conformity with the requirements of paragraph 5 of article 405 of the Treaties of Peace and are laid on the Table of the House. The question involved in these later Draft Conventions and Recommendations are also receiving the attention of the government. The Dominion government has proposed to the several Provincial governments that a Dominion-Provincial conference should be held for the purpose of considering aspects of matters arising out of the relations between Canada and the International Labour Organization. Most of the provinces have already expressed their acquiescence in this suggestion and it is expected that the meeting will be held in the early part of next summer."

(This conference was afterwards postponed until September in order to meet the convenience of the provincial representatives.)

#### INDUSTRIAL DISPUTES INVESTIGATION ACT

A bill to amend certain sections of the Industrial Disputes Investigation Act was introduced by the Minister of Labour and passed unanimously by the House of Commons, but amendments were subsequently made by the Senate in which the House was unable to concur and the bill was dropped for the session. An account of the bill, and of the proceedings in both chambers in connection therewith, is given elsewhere in this issue.

#### COMBINES, MONOPOLIES, TRUSTS AND MERGERS.

An act was passed for the investigation of combines, monopolies, trusts and mergers, providing for the appointment of a registrar and commissioners in connection with such investigations; for power to remit or reduce duties where combines are proved to exist; for the revocation of patent rights in certain cases; for prosecution by the Attorney-General of any province, or upon his failure to act, by the Solicitor-General of Canada and for the imposition of penalties for violations of the act.

In introducing this bill the Prime Minister gave the following summary of recent legislation on this subject:

There is at the present time no effective legislation against combines which are operating or may operate to the detriment of or against the interest of the public, whether producers, consumers or others. Such legislation as has been enacted by this parliament on the subject of combines in restraint of trade, the enhancement of prices and the like, is divisible broadly into three groups; first, the legislation with respect to conspiracies and combinations in restraint of trade which is embodied in the Criminal Code. It was originally enacted in a statute passed in 1889, which statute was to all intents and purposes declaratory of the common law. In 1892 this act was repealed by the Criminal Code, but the substance of its essential provision was re-enacted in section 520 of the Code of that year. The section of the Code was amended

in 1900 and again I think in 1906 when the Criminal Code was under consideration. [It now stands as section 498 of the Criminal Code in virtually the same words as the original enactment of 1889.

"The second group of provisions dealing with combines in restraint of trade, or operating to the detriment of the public, were those of the Combines Investigation Act of 1910 which provides for the investigation of combines, monopolies, trust and mergers.

"The third group is comprised in the legislation embodied in the Board of Commerce Act and the Combines and Fair Prices Act of 1919.

"The Combines and Fair Prices Act repealed the Combines Investigation Act of 1910. Such protection, therefore, as that act may have been presumed to have afforded to the public was removed by the Combines and Fair Prices Act of 1919. On the other hand, the Combines and Fair Prices Act of 1919 was itself dependent upon the Board of Commerce Act and the functioning of the Board of Commerce under the act. As hon. members of the House know, the Board of Commerce, under the Board of Commerce Act, never did function properly and has ceased to exist, so that such protection as might have been presumed to be afforded consumers or producers under the Board of Commerce Act and the Combines and Fair Prices Act also no longer exists.] While the Board of Commerce Act is not effective in any of the provisions so far as the protection of the public is concerned, Section 11 of the Combines and Fair Prices Act provides that no prosecution can be commenced under section 498 of the Criminal Code except under the written authority of the Board of Commerce. That section is still in the statute and as long as the statute remains, such protection as the Criminal Code may be assumed to have afforded producers and consumers is also of no effect.

"The legislation which the government proposes to introduce, repeals the Board of Commerce Act 1919 and the Combines and Fair Prices Act 1919, in that way freeing the statutes of two enactments which have become dead letters. On the other hand, this repeal will have the effect of reviving what there may be of virtue in section 498 of the Criminal Code which relates to conspiracies or combinations in restraint of trade.]

"Now, it is recognized that there are distinct limitations in the matter of the protection of the public under the provisions of the Criminal Code. The legislation which the government is introducing proceeds on the theory that the reason why section 498 of the Criminal Code is of so little effect is not that there are no combinations that are detrimental to the public or that such combinations are

rare, but rather that the existence of these combinations, and their method of operation is difficult to discover; that what is needed is effective machinery of investigation which will disclose the existence of combines operating to the detriment of the public, and afford the information whereby proceedings under the Criminal Code can be made really effective in the case of individuals who are violating its provisions, or who are associated with combines that are operating to the detriment of the public. The legislation to be introduced provides machinery for investigation which it is hoped and believed will be effective toward this end. I will described the proposed method of investigation a little more in detail when I refer to that particular phase of the subject.

The bill proposes to supplement the clause in the present Criminal Code by a provision creating a new criminal offence; making it an offence for any person to be a party or privy to or knowingly to assist in the formation or operation of a combine operating to the detriment of the public—a combine as defined in the legislation which is proposed. It will be readily observed that to be effective, the definition of the word "combine" must be made sufficiently comprehensive to include any agreement or arrangement, whether tacit, implied or expressed, which has the effect in practice of creating a combination that is operating against the public interest; and the definition of the word "combine", as set forth in the proposed legislation, has been drafted with the end in view of having it sufficiently broad to include all possibilities under that head. On the other hand, that parties may be properly protected in the matter of criminal prosecutions, in order that it cannot be said that anyone is being prosecuted without having the advantages which the courts of law and the procedure in the courts throw about one who is brought before them for trial, a provision is included in the proposed legislation to the effect that no prosecution can take place except at the instance of the Attorney General of a province or the Solicitor General of the Dominion.

The remedies that are proposed are first of all, as indicted, the remedy of publicity. There are some offences as to which publicity is more effective as a remedy than penalty. The law is drafted so as to make possible the widest publicity with respect to any offence under its provisions.

Then there is the remedy of penalty, to which I have already referred, as a result of criminal prosecution. There are other remedies which may be exercised as the circumstances warrant—for example where it would appear that in the case of an article of commerce the parties concerned were profiting by virtue of the tariff as it is, power is given to the Governor in Council to reduce

or to abolish duties with respect to that particular article. Similarly, where a patent is being used to limit manufacture, or in other ways limit competition, to the detriment of the public, power is given for the revocation of the patent.

In the proposed legislation the government has sought to be guided by such experience as the country has had in the workings of previous legislation; to retain what may have been of value in the Combines Investigation Act of 1910, and what may have been of value in the Board of Commerce Act and the Combines and Fair Prices Act of 1919, but to meet, as far as may be possible, what has been found defective or in the nature of limitation in the successful working of both these enactments. The Combines Investigation Act of 1910 provided that where any six persons were of the opinion that a combine existed which was detrimental to the public they might appear before any judge of a high court and make out a *prima facie* case. If they succeeded, the judge was required to report accordingly to the registrar appointed under the act. The registrar thereupon called upon the parties who had made out the *prima facie* case, and upon the parties concerned in the combine, each to name a representative for a board, the two to agree upon a third representative, and the three thus named were constituted a board of investigation, which board was given all the powers of a court of record. When the board had made its report the Governor in Council was then free to take such action as was thought best in accordance with other provisions of the statute, provisions similar to those respecting the reduction of customs duties, the revocation of patents, and criminal proceedings, to which I have already alluded.

It was found under the Combines Investigation Act that obliging individuals in the first instance to associate themselves together and make out a *prima facie* case before a judge discouraged in large measure any investigation. The parties seemed to be under the impression—although the law did not give ground for it—that they would necessarily have to bear the expense of the preliminary investigation, and might have to bear the expense of the investigation before the board that was subsequently appointed. For that reason, and possibly others as well, the Combines Investigation Act of 1910 was not used to the extent expected at the time that that measure was passed.

“In the present proposed legislation the objection which I have just referred to has been removed by not obliging the parties to get together and prove a case before a judge in the first instance, but by permitting parties who believed a combine is operating in restraint of trade to make direct application to the registrar to be appointed under this act, and giving power to the registrar to him-

self make an investigation to satisfy his own mind as to whether such a combination does exist or not. The act gives the registrar very full powers. He may, if he so desires, proceed on his own initiative. The act further provides that the government may appoint one or more commissioners, where it is shown before the registrar, or for other reasons there are grounds for believing that the combine is operating to the detriment of the public. The government may appoint these commissioners with all the powers that commissioners have under the Enquiries Act, take evidence under oath, visit the premises, inspect books, compel the production of documents, if they like. Ample provision is made to secure the due exercise of these powers. Under the Board of Commerce Act there was created an extraordinary court, a court of record with powers of inquisition, accusation and judgment, all exercisable by the same body. I will not go into the reasons which seemed to render a court of that kind valueless for the purpose for which it was instituted. I will simply point out that it had functions which seldom are combined in any one body, that namely of beginning investigation, of laying information, of prosecuting, of pronouncing judgment and seeing to the enforcement of that judgment. It moreover was a single court, constituted of a definite personnel; it was supposed to have and did have virtually the whole say as to what prosecutions should be commenced, even as I have already indicated for violations of the Criminal Code. Experience has shown that a board of that kind cannot be expected to function properly, and instead, therefore, of a board of that character, this measure proposes to give full power of investigation to commissioners to be specially appointed from time to time as occasion may require.

“The only amendment made in the bill by the Senate provided that the statement which must be submitted when the six persons apply for an investigation shall be in the form of a solemn or statutory declaration. This amendment was accepted by the House of Commons.”

#### CIVIL SERVICE OF CANADA.

The Civil Service Superannuation Act was amended by the repeal of the clause authorizing the Treasury Board to grant additional years in fixing a retiring allowance. If any addition is now deemed necessary it can be effected by a special appropriation made by the House instead of by the act of the Treasury Board.

The Public Service Retirement Act, commonly known as the Calder Act, was extended for a further period of one year.

A bill designed to take from the jurisdiction of the Civil Service Commission employees whose term of office is seasonal or temporary, and who are appointed at the beginning of each seasonal period, was allowed to drop.

A special committee of the House on the civil service was appointed early in the session. When the government's attention was called to the fact that a large number of civil servants were members of labour organizations this committee was enlarged to include a member to represent the interests of labour. The committee, in its report, made a number of important recommendations, including the revision of salaries, and superannuation. As the report was presented late in the session sufficient time was not left to permit of legislation along the lines of the recommendations, but the Prime Minister stated that the government would be prepared to present a bill early next session meeting the recommendations in so far as might appear to be in the public interest.

#### ORIENTAL IMMIGRATION.

An act was passed restricting Chinese immigration, this act implementing a promise made by the government in May, 1922, to restrict the immigration of orientals into Canada. The act abolishes the head tax on persons of Chinese origin and restricts the right of entry to certain classes of Chinese, including children born in Canada who have left Canada and are returning, *bona fide* merchants, whose entry would be likely to promote trade between China and Canada and students while in actual pursuit of their studies. All Chinese in Canada, irrespective of allegiance, are required to register and those wishing to leave Canada intending to return may do so within two

years. Certain amendments were made in the bill by the Senate, the intention mainly being to ease the case of Chinese already residing in Canada, and were accepted by the House of Commons.

In regard to Japanese immigration the Prime Minister stated that the Government had received from the Government of Japan representations to the effect that the Government was prepared to further restrict the immigration of Japanese labourers into Canada.

#### IMMIGRATION ACT.

A bill amending the Immigration Act in its original form altered certain amendments made in 1919 with respect to the powers allowed to the minister to deport certain classes of persons, even although they should be British subjects. As passed by the House of Commons the bill abolished the application of this section to aliens. The Senate, however, struck out the proposed amendment and the amendment of 1919 still remains in force.

#### OTHER MEASURES.

A grant of \$25,000 was made to the Canadian National Safety League in the Prime Minister's words "to enable an organization which has made good in one province, and which has shown its capacity to do effective work, to get similar organizations or branches formed in all the provinces, so that there will be a nation-wide 'safety first' organization carrying on conservation work in human life and limb in all the provinces." The provincial grant is intended to assist the Safety League in the inauguration of a Dominion-wide campaign.

A proposal to disband the Royal Canadian Mounted Police on the ground that members of this force were alleged to be employed in espionage in connection with labour organizations, was defeated in a division by 156 votes to 23.

A motion that for the purpose of demonstrating the working and effects of the system of proportional representation one or more multi-member constituencies should be constituted by the redistribution legislation in which that system should be applied at the next general election, was defeated by a vote of 72 for, and 90 against, the resolution.

In connection with the decennial revision of the Bank Act a proposal to insert a section granting to bank employees the right of association for all lawful purpose, was defeated, on the ground that no existing law prohibits such associations.

In reply to a question the government announced that no action would be taken during the session to give effect to the resolution adopted at the Parliamentary session of 1922 in favour of establishing a system of old age pensions in Canada.

#### Ontario.

The Fourth Session of the Fifteenth Legislature of Ontario began on January 23 and continued until May 8, 1923. Several new measures affecting labour as well as amendments to existing labour legislation were passed. In the opening Speech from the Throne reference was made to the successful working of the Agricultural Development Act, long term loans aggregating more than two million dollars having been made in the first year of operation, while fifteen local associations took advantage of the legislation providing for short term loans. Many urban municipalities, it was stated, took advantage of the Vocational Education Act and of the Dominion Technical Education Act to secure assistance in building and equipping schools for instruction in academic and vocational subjects. The increased activity in metalliferous mining in the Province was also referred to, a revival being noted in nickel-copper mining, smelting and refining operations, silver

production increasing by 20 per cent and gold production by 40 per cent.

The Mechanics' and Wage Earners' Lien Act enacted during the recent session consolidated and thoroughly revised the previous acts on this subject. The new measure provides additional security to the workers and simplifies the law both in its terms and in its method. A feature of the new act is the wider power allowed to the judge trying an action for lien to use his discretion in seeing that all the parties concerned receive reasonable and just treatment. The sections which define the procedure in such actions are revised in many details, and a subsection is added to provide that the form of judgment may be varied by the judge or officer to meet the circumstances of any case so as to afford to the parties to the proceedings any right or remedy in the judgment to which they may be entitled. Some sections are redrafted to provide greater protection against fraudulent agreements between an owner and a contractor by means of fictitious contract prices. Among other numerous changes the new act provides that wage-earners may enforce liens in respect to uncompleted contracts, notice of motion that the applicant will ask for judgment on his claim to be served on the proper parties; lienholders are entitled, at any reasonable time to inspect the agreement relating to the work which is to be performed; where a valid lien is not established a claimant may nevertheless recover a personal judgment against any party to the action.

The sub-section of the Workmen's Compensation Act which limits the amount of compensation payable in respect to death or injury to 66 2/3 per cent of his average monthly earnings was amended by the addition of a clause establishing \$12.50 per week as the minimum rate of compensation where the dependants are a widow (or an invalid husband) and one or more children. The effect of this amendment

is shown as follows: Where a workman whose average earnings are \$60 a month is killed leaving a widow and two children, formerly only \$40 a month compensation (two-thirds of \$60) could be paid; now the widow and children will receive \$54.17 a month (the latter being the equivalent of \$12.50 a week); and this will be the allowance no matter how small the deceased workman's earnings. The amendment will not in any case give a widow or child more than the \$40 and \$10 respectively prescribed in the other clauses of the Act, nor does it apply to any case except where there is a widow (or an invalid husband) and one or more children. The amendment came into force on May 8, 1923, and applies to pension payments accruing after that date in past cases as well as to future cases.

By an amendment to the Municipal Act municipal councils are authorized, as an alternative to the existing gratuity system, to grant an annual retiring allowance for life to any officer who has been in the service of the corporation for at least 20 years, and who through illness or old age has become incapable of discharging his duties efficiently. The allowances are limited in amount to three-fifths of the average annual salary for the last three years of his service. Under the gratuity system, instituted in 1913, such employees received on retirement a lump sum not exceeding the aggregate of salary for the last three years.

Municipal councils were authorized to pass bylaws to enable commercial travellers, whose employment necessitates their absence from time to time from the municipality, to take special

polls preceding the date of the regular municipal and school board elections. Formerly this privilege was confined to railway employees, railway mail clerks employed by the Post Office Department of Canada, and railway express clerks employed by an express company.

Under an amendment to the Adolescent School Attendance Act, boys and girls whose parents or guardians reside in a rural school section and whose services are required in the household or on the farm of their parents or guardians, were exempted from those provisions of the Act which require full time school attendance of adolescents between the ages of 14 and 16 years. Claims for exemption were previously allowed only in cases of sickness or where a home permit or employment certificate had been granted, or equivalent courses of study had been begun or completed. By a proclamation published in the Ontario Gazette on May 19, the date on which section 7 of the Adolescent School Attendance Act will take effect was deferred for a further period of two years, namely from September 1, 1923, to September 1, 1925. The earlier date had been fixed for this section of the act in a proclamation of July 13, 1920. Section 7 provides that except in cases of sickness or where equivalent training is, or has been provided, every adolescent between 16 and 18 years of age shall attend part-time courses of instruction, approved by the Minister, for an aggregate of at least 320 hours each year, distributed as regards times and seasons as may suit the circumstances of each locality when such courses of instruction are established

in the municipality in which he resides or is employed. The power conferred upon the Lieutenant-Governor in Council under the Act of 1921 to authorize the extra-mural employment of persons confined in prisons or reformatories in the Province, was, by an amendment to the Act, limited to persons confined or transferred under a Provincial statute. A special act was passed to provide that the Attorney General's consent is not required before any action is commenced against the Hydro Electric Power Commission of Ontario for damages arising through the negligence of the agents, contractors, officers, employees or servants of the Commission in the construction, equipment or operation of an electric railway. By an amendment to the Landlord and Tenant Act, it was provided that where a tenant disputes the landlord's right to distrain any of his goods or disputes the amount claimed by a landlord, either party may apply to a judge, who may determine the dispute summarily.

Among the other measures of the session may be mentioned also an extension of the system of rural credit which was established two years ago, and an act to assist the consolidation of cheese factories and thus stabilize the production of this commodity in the Province. Provision was made during the session for the continuance of development work in the north and north-western portions of the Province and for the completion of the Provincial Railway to James Bay (Hudson's Bay).

A bill to provide free text books in public, separate, and industrial schools was defeated on its second reading.

Other bills failing to reach the final stages included proposals to amend the Vocational Education Act by providing that the representatives of the employers and employees serving on advisory committees under the act should as far as possible be appointed by the employers' or employees' organizations respectively; to amend the law as to contributory negligence in connection with fatal accidents; to ensure fair wages on Provincial Government contracts; to regulate public automobile garages and service stations and to govern the employment and examination of automobile mechanics employed therein; and "to provide for the better prevention of certain commercial agreements." In connection with the last named proposal, a similar bill, aiming at the prevention of conspiracies in restraint of trade, was introduced at the previous session and was then referred to a special committee which met for investigation during the recess. This committee reported early in the course of the last session that they had reached the conclusion "that the public interest will be sufficiently served at the present time by confining the operation of any legislation to such trade agreements as are or may be deemed violations of the criminal code of Canada, and by providing means by which information may be obtained by the Attorney General before taking action for the annulment of such an agreement by the court, and by conferring upon the court in an action of the suit of the attorney general for that purpose, power to restrain any action under the agreement and to direct the future course to be pursued by the parties therein."

## PROPOSED AMENDMENTS OF INDUSTRIAL DISPUTES INVESTIGATION ACT.

### Disagreement between Senate and House of Commons.

A BILL to amend the Industrial Disputes Investigation Act, 1907, was introduced by the Hon. James Murdock, Minister of Labour, in the House of Commons on March 21 and passed unanimously by the House on April 20. The Minister explained that the proposed amendments, which related to sections 15, 57 and 58, involved no change in the purpose of the Act, but were designed to convey more clearly the intent of these sections as they now stand and have been understood for a number of years. The Senate subsequently introduced amendments which, in the opinion of the House of Commons, were inconsistent with the purposes of the bill, and could not be accepted. The view of the House of Commons to this effect was communicated to the Senate, but the latter decided to adhere to its proposed amendments; under these circumstances the bill was dropped.

The bill as passed by the House of Commons is printed below, followed by the sections of the Industrial Disputes Investigation Act affected by the bill, the proposed amendments being shown in italics:

#### *An Act to amend The Industrial Disputes Investigation Act, 1907.*

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. Subparagraph (b) of paragraph two of section fifteen of *The Industrial Disputes Investigation Act, 1907*, as enacted by section two of chapter twenty-nine of the statutes of 1910, is amended by inserting after the word "committee", in the eighteenth line thereof, the words "of the employees"; and by inserting after the word "employer" in the nineteenth line thereof, the words "or that it has been impossible to secure conference or to enter into negotiations"; and by inserting

after the word "further", in the last line thereof, the words "effort or".

2. Section fifty-seven of the said Act, as amended by section five of chapter twenty-nine of the statutes of 1910, and as further amended by section five of chapter twenty-nine of the statutes of 1920, is further amended by inserting after the word "intended", in the second line thereof, the words "or desired"; and by inserting after the word "intended", in the fourth line thereof, the words "or desired"; and by inserting after the word "dispute", in the fourth line thereof, the words "it shall be unlawful for the employer to make effective a proposed change in wages or hours or for the employees to go on strike"; and by inserting, after the word "affected", in the seventh line thereof, the words "the application for the appointment of a Board shall be made by the employers or employees proposing the change in wages or in hours";

3. Section fifty-eight of the said Act is amended by inserting after the word "lock-out", in the first line thereof, the words "or making effective a change in wages or hours"; and by inserting after the word "lockout", in the last line thereof, the words "or change".

The following paragraphs show sections 15, 57, and 58 of the Industrial Disputes Investigation Act, the additions proposed by the amending bill being printed in italics.

See, 15 (b). . . failing an adjustment of the dispute or a reference thereof by the Minister to a Board to the best of the knowledge and belief of the declarants a strike will be declared, that the dispute has been the subject of negotiations between the committee of the employees and the employer, or that it has been impossible to secure conference or to enter into negotiations, that all efforts to obtain a satisfactory settlement have failed, and that there is no reasonable hope of securing settlement by further effort or negotiations. (1910, c. 29.)

Sec. 57.—Employers and employees shall give at least thirty days' notice of an intended or desired change affecting conditions of employment with respect to wages or hours; and in the event of such intended or desired change resulting in a dispute, it shall be unlawful for the employer to make effective a proposed

*change in wages or hours or for the employees to go on strike, until the dispute has been finally dealt with by a Board, and a copy of its report has been delivered through the Registrar to both the parties affected; the application for the appointment of a Board shall be made by the employers or employees proposing the change in wages or hours; neither of those parties shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing, directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute; but if, in the opinion of the Board, either party uses this or any other provision of this Act for the purpose of unjustly maintaining a given condition of affairs through delay, and the Board so reports to the Minister, such party shall be guilty of an offence, and liable to the same penalties as are imposed for a violation of the next preceding section (Am. 1920, c. 29).*

Sec. 58.—Any employer declaring or causing a lockout or making effective a change in wages or hours contrary to the provisions of this Act shall be liable to a fine of not less than one hundred dollars, nor more than one thousand dollars for each day or part of a day that such lockout or change exists.

#### The Amendments Explained.

The Minister explained in the House of Commons on April 20 that the proposed amendment in section 15, relating to declarations by trade union officers, would facilitate applications for boards of investigation. In certain cases in the past, he said, workers' committees could not make applications as required by this section for the reason that communications which such committees would address to the employer remained unanswered, and that therefore the committees could not literally declare that negotiations had been held as required. Heretofore it had been difficult to affirm in certain cases that negotiations had taken place, and that all efforts to effect a settlement by negotiation had failed. The amendment proposed to meet this situation by declaring that, to warrant the forming of a board, it should be sufficient for the workers' committees to make a declaration that it had been

impossible to secure a conference or enter into negotiation.

In regard to section 57, which governs the relations of parties pending proceedings, the Minister explained the proposed amendments as follows:

It is proposed to place clearly upon one of the parties to the dispute the onus or responsibility of applying for the board of investigation. In many cases in the past the employer and the employee have waited for one or the other to move, the one expecting that the other was going to ask for a board of investigation, neither party accepting it as their responsibility to make the necessary application. It seems as though—in the general orderly process that, I think, Canada requires in the conduct of relations between employers and workmen—the responsibility for making the application should rest somewhere. We are trying, in section 57, to define where that responsibility shall rest and to indicate to either the employer or the employee, as the case may be, that it is his responsibility under the law to make the necessary application for the board."

The Minister further emphasized the fact that in the past there had been no obligation upon either party to make a move. By far the largest number of applications that had been made for boards had been made by employees and not by employers. The purpose of the amendment was to assign properly the responsibility for failure to do the thing which the public expects shall be done on the part of an employer or on the part of the employee, and to oblige the party proposing a change to ask for a board if the dispute is not settled by mutual agreement.

#### The Senate Amendments.

In its passage through the Senate the bill, in the form in which it left the House of Commons was strongly supported by Senator Dandurand, the Government leader. The principles of the bill were also in general approved by Senator G. D. Robertson, former Minister of Labour, who favoured the amendments which the bill proposed, and resisted other amendments proposed in the Senate as impairing the efficacy of the Act as it now stands.

Section 1 of the bill, amending Section 15 of the Act, was allowed to stand.

In the course of a debate on May 15 on Section 2 of the bill, Senator Robertson, former Minister of Labour, remarked as follows:

"For years after the Industrial Disputes Act became law there was a persistent and continued opposition to it on the part of organized labour in this country, and every year from 1907 to 1912, at the annual sessions of the Labour Congress of Canada, resolutions were passed demanding the repeal of the law—in fact, I think I am safe in saying up to 1917. More recently, by reason of efforts that have been made by succeeding Administrations to administer the law fairly and impartially and to show no favouritism to either party, Labour slowly and surely acquired some confidence in the honest intentions of the law and the gentlemen who placed it upon the Statute Book. For sixteen years the labour organizations affected by this legislation had suffered, consequent upon the operation of the Act, all the losses that were entailed thereby, and all they ask, and all the Government asks in presenting this amendment to Parliament, is that the employers to-day be required to do likewise. The law as it stands now contemplated that the employers would respect it in that respect. But in 1921, when the general reduction was threatened, the Department of Justice was consulted, and said: 'Yes, the employers are undoubtedly violating the spirit of the Act, but we are afraid that they cannot be brought to book or penalized in any way'—Why? Because the penalty clauses of the Act only provide penalties for two offences: one, if employees go on strike contrary to the provisions of the Act; and, two, if the employer indulges in a lockout. In this case the employers were not locking out anybody; they were simply saying: 'We are going to reduce your wages; we are not violating the law'. But undoubtedly they were violating the spirit and intent of the law; so the Government to-day ask Parliament to endorse an amendment to the Act which will cause it to be interpreted as it was always intended that it should be, in such manner that will work equitably and fairly to all parties concerned and affected by it."

The Hon. Mr. Dandurand, speaking of the efficacy of the act in the past said:

"The Industrial Disputes Investigation Act has brought about this result in Canada, that of 580 disputes referred under the terms of the statute from 1907 to 1923, there have been

only 36 cases in which the threatened strike was not averted. I maintain that this is a very important result. One of the late Ministers of Labour, who was not from the labour world, the late Hon. Mr. Crothers, stated in 1917, after having had the administration of this Act under his supervision, the following opinion:

"One sometimes hears it said that the labour laws of Australia are far in advance of ours, and I wish to say a word for the Industrial Disputes Investigation Act. Although the Act is not a child of mine, I have never lost an opportunity of giving credit to those who succeeded in getting this Act placed upon the Statute Book of Canada. I believe the principle involved in it is good, and I am sure that it has been the means of preventing large numbers of strikes. This Act has saved the wage earners of this country millions and millions of dollars. It has maintained industrial peace in scores of cases where very serious troubles would have developed but for the provisions of this or some similar Act."

Section 2 was deleted from the bill on the motion of Senator W. B. Ross, who said:

"If you strike out this section and leave the matter as it is, you will be doing no injustice to labour. It will be in their interest to get as quick a decision as they can. The board can make this award as of the date when the reduction took place, and they will get their money. On the other hand, if you adopt this new procedure and require the company to go on at the existing rate of wages pending the decision of the board, and to do so under a penalty of \$1,000 a day, you may do a great injustice to the company, because if it should take three or four months they would pay out a large amount of wages in that time, and it is a commonplace to say that they would have no way of getting it back. As we are doing no injustice to the labourer and conferring no new right on the employer, I think it would be wise to strike out this section and leave the law as it is.

Senator Béique subsequently made a motion, which was agreed to, that Section 57 of the Act stand as at present, but that the following paragraph be added as Section 57a.

"57a: It shall be unlawful for any employer without the consent of a majority of the employees evidenced in writing, signed by them, or their authorized representatives, or for any employee to make any change in the conditions of employment with respect to wages or hours, unless the party making the change has before doing so applied for the

appointment of a Board to which the dispute shall be submitted, and as regards wages the Board may declare its decision retroactive to any date not anterior to that on which the change was made. On the failure of either party to abide by the decision of the Board the other party may have recourse to a strike or lockout as the case may be."

On consideration of Section 3 of the amending bill, relating to the penalty for causing lockouts, Senator Lynch-Stanton proposed to amend Section 8 of the Industrial Disputes Act, explaining his proposal as follows:

"By the provision of subsection 3 of section 8 of the Act of 1907, where the employer and the employee do not agree upon a third arbitrator, the appointment is in the hands of the Minister of Labour. Now, it has been represented to me by very important employers that this is not a very satisfactory condition, and that a great many employers have refused to agree to a Board because they have felt that the Minister of Labour, in the nature of things, cannot be an impartial umpire between the contending parties. They say that the selection should be made by a man who is not affiliated with either side. I point out that it has been stated here that nearly all the applications for Boards have been made by employees. One of the reasons, as given to me—personally I know nothing about it—is that the labour representative consistently declines to agree to a third man, because he thinks that the Minister of Labour will cast a benevolent eye on his side. I therefore wish to substitute for the Minister of Labour the Chief Justice of the province in which the dispute arises, or, if the dispute interests more than one province, then the Chief Justice of the Supreme Court of Canada. I therefore beg leave to move:

4. (1) Subsection 2 of section eight of the said Act is hereby repealed and the following substituted therefor:

“(2) If either of the parties fails or neglects to duly make any recommendation within the said period, or such extension thereof as the Minister on cause shown grants, the Chief Justice of the province in which the dispute arose, or, if there be no such Chief Justice in that province, the Chief Justice of the highest court of last resort in civil matters in that province, or, in any case where the dispute did not arise in one province only, the Chief Justice of the Supreme Court of Canada, shall as soon thereafter as possible appoint a fit person to be a member of the Board; and such member shall be deemed to be appointed on the recommendation of the said party.”

Section 4 of the said section eight is hereby repealed and the following substituted therefor:

“(4) If the members chosen on the recommendation of the parties fail or neglect to duly make any recommendation within the said period, or such extension thereof as the Minister on cause shown grants, the Chief Justice of the province in which the dispute arose, or, if there be no such Chief Justice in that province, the Chief Justice of the highest court of last resort in civil matters in that province, or, in any case where the dispute did not arise in one province only, the Chief Justice of the Supreme Court of Canada, shall as soon thereafter as possible appoint a fit person to be a third member of the Board, and such member shall be deemed to be appointed on the recommendation of the other two members of the Board.”

Then I will read it altogether:

(3) The following is hereby added to the said section 8 as subsection 6 thereof:

In subsections 2 and 4 of this section the expression, “Chief Justice” includes any judge duly authorized as and for the Chief Justice.

The foregoing amendment was agreed to by a vote of 26 to 16.

On the third reading, Senator Robertson moved that the bill be referred back to the committee of the whole House for the purpose of reconsidering the proposed amendment to Section 8 of the Industrial Disputes Investigation Act, on the ground that there had been a misunderstanding, and also with a view to an amendment which would permit a renewal of the practice of appointing judges as chairmen. Prior to 1920, he said, in almost every case in which the Minister had to appoint a chairman of a board of conciliation a judge was selected, but in 1920 the Judges Act was amended, and again in 1921 it was further amended, so that judges could be used but not paid. “Experience taught the Labour Department that judges, like other men, are not very anxious to render special services unless they are compensated, so the Department has been deprived

of the services of judges as chairmen of boards."

Senator Robertson's motion was carried by a vote of 28 to 10. When, however, the bill was recommitted and Senator Dandurand moved to strike out the amendment of Senator Lynch-Staunton the Committee voted by 35 to 25 to retain the amendment.

A further proposal to amend the Act by adding the following paragraph as section 57a was made by Senator G. V. White, but was negatived without a division:

57b. It shall be unlawful for employers to declare a lockout, or for employees to go on strike, concerning any further matter or cause other than those affecting conditions of employment with respect to wages or hours, until such matter or cause has been finally dealt with by a Board and copy of its report delivered through the Registrar to both parties affected.

The bill as amended passed its third reading in the Senate on June 20.

#### Non-Concurrence in Senate Amendments.

When the amendments made in the bill by the Senate were under consideration in the House of Commons on June 25 the Minister of Labour moved:

"That a message be sent to the Senate to acquaint their Honours that this House disagrees to their amendments to Bill No. 84, an act to amend the Industrial Disputes Investigation Act, 1907, for reasons that the said amendments defeat the objects aimed at in the bill and would complicate rather than simplify procedure."

In explanation of the motion the Minister made the following statement:

This bill as originally introduced into the House of Commons had as its object the amendment of sections 15, 27 and 58. No new features were proposed, the amendments seeking simply to convey more clearly the intent of those sections as they had been generally understood; also in the case of section 58 a specific penalty was provided for an offence with regard to which in the statute as it had stood a penalty was implied but not stated. The principal amendment was that whereby in section 57 it is provided that where employer or workmen intend or desire to make a change

in wages or hours "it shall be unlawful for the employer to make effective a proposed change in wages or hours or for the employees to go on strike until the dispute has been finally dealt with by a board and a copy of its report has been delivered through the registrar to both the parties affected." This proposed amendment in no way varies the intent of the clause but makes its meaning indisputable. In the amending bill this same section 57 is further amended by requiring that "the application for the appointment of a board shall be made by the employers or employees proposing the change in wages or hours." Whilst it has seemed clearly the intent of the statute that an application for the establishment of a board should proceed from the party proposing any such change as contemplated, yet this is not expressly stated, and, in the case of the several hundred boards which have been established in the past sixteen or seventeen years, the applications from the employers have been few in number, not, in fact, exceeding more than two or three per cent, a situation which has worked serious injustice to the workmen and has naturally aroused their resentment. Under the amendment proposed by the Minister of Labour when the employer proposed a change it would be his duty to make application for a conciliation board.

The amending bill passed the House of Commons without change. As the bill has been returned to this House, its object with respect to clarification of section 57 is entirely defeated, whilst an additional clause affecting the appointment of the chairman of a board has been added to the bill, which, if accepted, would tend seriously to delay and embarrass those administering the statute. The bill as it now before parliament leaves section 57 without the clarifying additions proposed in the amending statute, but with a clause added which is quite inconsistent with and contrary in its effect to the main clause, for whereas clause 57 as it now stands provides quite clearly that a change with regard to wages and hours cannot be made effective until any dispute arising has been "dealt with by a board and a copy of its report has been delivered through the registrar to both the parties affected;" yet the amendment of the upper house apparently seeks to have the proposed change effective as soon as the application for a board has been made.

The effect of this portion of the proposed addition to section 57 is therefore to render the whole section contradictory and confusing as between its different paragraphs. The remainder of the clause proposed as supplementary to section 57 adds to the confusion by introducing a reference to the retroactive character of the findings of a board. The reference in question does not actually add to the authority which a conciliation board has

always been free to exercise, and, with regard to the declaration contained in the last sentence of the supplementary clause that "on the failure of either party to abide by the decision of the board, the other party may have recourse to a strike or lockout as the case may be," this also in no way increases or extends the rights or powers of the parties to a dispute beyond those which they would in any case possess under the statute. The amendment of the upper house with respect to section 57 would, therefore, have the effect of confusing, complicating and delaying procedure, without bringing compensating benefit of any kind.

The amendment proposed by the upper house with regard to section 8 respecting the appointment of a chairman introduces a new feature. The statute as it stands provides for the selection of a chairman by joint agreement when possible of the other two members of a conciliation board, and requires that, where no agreement is reached, the minister shall make the necessary appointment. In about one-half of several hundred boards which have been established a chairman has been secured by agreement. It had become a general though not invariable practice for the Minister of Labour, when called upon to appoint a chairman, to select a judge, but this practice ceased when two or three years ago the Judges' Act was so amended as to prohibit the acceptance by a judge of the fees ordinarily payable to a chairman or member of a conciliation board. It is true that the Minister of Labour is not under the Judges' Act, as it has been amended, prohibited from asking a judge to act as a chairman, nor is a judge apparently prohibited from accepting a chairmanship; but since fees are no longer payable in such circumstances to a judge, it has not been thought reasonable as a rule to request a judge to undertake the duties involved in a chairmanship; such duties, it will be understood, are frequently of a severe and arduous nature and in nearly all cases are of the highest moment to employers and to large numbers of workmen, as well as frequently to the public. In two cases since the amendment of the Judges' Act, judges have been, however, appointed, once by the Minister of Labour of the late administration and once by the present Minister of Labour, but in the latter case the appointment was made on the joint recommendation of the other board members. In both cases the judges concerned accepted from a sense of public duty; no fees were of course paid them. It may be said that there is every advantage in a chairman being secured by joint agreement and the Minister of Labour appoints a chairman with reluctance. Inquiry shows that this has been the case with most previous ministers. The chances of an agreement are manifestly increased when a chairman is

secured by joint request of other board members. The method or system, however, under which different Ministers of Labour have made appointments has not been the subject of any known criticism, and certainly the files contain no communications requesting or suggesting a change in the present practice.

The objections to the system laid down in the Senate amendment are obvious. In the first place, the appointment of a chairman by a Chief Justice, whether the Chief Justice of a province or of the Supreme Court of Canada, would entail inevitable delay. Such delays would be particularly unfortunate since, despite every effort under present procedure, one side or other of the disputing parties is sometimes disposed to object to the time necessarily occupied in procedure. In the second place, a Chief Justice or other judge cannot possibly be as intimately seized of the nature of the dispute involved and of the particular type therefore of man wanted for the chairmanship as would be the Minister of Labour, who has established the board and has been in touch with details of procedure from its inception. It would be impossible to convey to a judge at a distant point by correspondence, which would of necessity be as a rule by telegraph with consequent serious expenditure and some danger of inaccuracy, all the particulars which should be properly at hand to enable the judge to reach a correct conclusion as to the type of person apparently best suited for the important duties involved. The judge would exercise his best judgment and the appointment might or might not prove to be a good one. In any case the minister who is charged with the administration of the statute would be freed from responsibility on this most vital aspect of administration and the judges would become involved in the technicalities of departmental procedure. Since a considerable proportion of the disputes dealt with under the statute extend to two or more provinces, the task of naming the chairman of conciliation boards would under the proposed Senate amendment fall most frequently to the Chief Justice of the Supreme Court, who from the nature of his functions may be presumed to be furthest removed from contact with industrial disputes and necessarily therefore the more dependent on the advice of others as to the type of person best suited for a chairman in a particular case. Despite the high legal and other attainments which a Chief Justice would undoubtedly possess, it is submitted that, in addition to the complication and delays in procedure which the proposed system of appointing chairmen would entail, the suggested change would be highly detrimental to the successful administration of the statute. I would, therefore, move that the amendments of the Senate be not concurred in.

After further debate the Minister's motion was agreed to by the House of Commons without a division.

The Senate, on June 27, considered a message from the House of Commons to the effect that the House disagreed with the amendments made by the Senate, for the reason that these amendments defeated the objects aimed at in the bill, and would complicate rather than simplify procedure. Senator Robertson endeavoured to effect a compromise by having the Senate amendment to section 57 enacted and that to section 8, *re* appointment of chairman, withdrawn, and moved accordingly that the Senate insist on its amendment to section 57, by adding section 57a, as proposed; this motion was carried. Senator Robertson next moved that the Senate do not insist upon its amendment with reference to

the appointment of the Chief Justice, but this motion was negatived on a division by 32 votes to 26, and the Senate amendments remained as before. Accordingly a notice was sent to the House of Commons that the Senate insisted upon the amendments made by them in the bill, for the following reasons: (1) Because the provisions of the act should be equally applicable to employer and employee; (2) because the selection of the third arbitrator by the chief justice of a court would remove any possible objection that the person selected might be more closely associated with either one of the contending parties.

No further action was taken in the matter by the House of Commons and the amending bill was dropped for the session with the result that the Act remains unchanged.

---

### CANADIAN INDUSTRIAL PENSIONS.

ON April 1, at the beginning of the present fiscal year, the Dominion Government Annuities Branch was transferred to the Department of Labour from the Post Office Department. At the annual meeting of the Canadian Manufacturers' Association which was held at Toronto in June an address on Canadian Industrial Pensions was delivered by Mr. S. T. Bastedo, superintendent of this Branch, in which he showed the benefits to both employers and their employees that may be obtained by availing themselves of the Government Annuities Act.

The address of Mr. Bastedo was as follows:

The question of industrial pensions is one which has for some time been occupying the thoughtful consideration of many employers and employees. It, presumably, has been difficult of solution, as few, if any, Canadian concerns have in operation a pension system that is working satisfactorily, or that is constituted on a solvent basis. I am, there-

fore, glad of the opportunity which Mr. Walsh has been good enough to arrange for me of presenting for your information some of the salient features of the Government Annuities Act, which I may say was designed expressly for the purpose of affording the facilities whereby our people may be aided and encouraged to make provision for old age by the purchase of annuities. It contains a provision that employers of labour may, pursuant to agreement entered into with their employees in that behalf, contract with His Majesty for the sale to such of their employees as are resident or domiciled in Canada of annuities otherwise purchasable by such employees as individuals. Any sums of money necessary to the carrying out of this object, whether such sums are derived from the wages of the employees solely, or partly from the wages of the employees and partly from contributions of the employers, or from contributions of the employers solely, may be paid by such employers direct to the Government, and I am glad to be able to say that the Hon. Mr. Murdock, the Minister under whose direction the Act is now being administered, will be pleased to co-operate with employers and employees in their efforts to formulate a satisfactory scheme by placing the machinery of the Annuities Branch at their disposal. The Act

requires that any agreement entered into between employers and employees shall be of a form approved by the Minister, a proviso which was probably inserted in the Act so that the parties to the agreement might regard it as being equitable and just.

I think it may be truly said that every employer of labour is desirous of finding a solution of this vexatious problem, and that he feels keenly the position of old employees who leave his employment after years of faithful service with, in a majority of cases, nothing but the open door of the poorhouse in sight. He is forced to dispense with their services if regard is to be had to the maintenance of a vigorous and active staff, and with the recurrence of these sad events there is impressed upon him the advantage of a superannuation system under which he might be able to say to his employees as they reach the age of retirement: "Good-bye, go and enjoy your well-earned leisure."

It is not necessary for me to mention the difficulties with which employers and employees have been faced in their efforts to evolve a pension system, these being already too well known, suffice it to say that both in this country and in the United States the pathway of industrial concerns which have attempted to operate such schemes on other than an actuarial basis is strewn with failures. It required but a few years of operation to demonstrate their inadequacy. Even so well managed an organization as the United States Steel Corporation, with a fund to begin with of \$12,000,000, established jointly by the Corporation and Mr. Andrew Carnegie, after five years' practical experience found it advisable to change their superannuation plan to one on a reserve basis, and its then Chairman, the Hon. Mr. Gary, to whose attention I brought the Canadian System in the hope that he might apply it to a small branch in Canada, said that if at the time their scheme was inaugurated there had existed in the United States such an opportunity as is provided by the Canadian Government, their pension plans might perhaps have taken some different form through arrangements with the Government. Another large employer in the United States, with whom I had some correspondence in regard to the system which he was operating, said he had come to the conclusion, after a number of years' experience, that no such scheme could be operated successfully unless under Government control. As to the merits of the Canadian System, I might quote from a letter which I received a few years ago from an eminent Canadian, well known throughout the Dominion as a leading authority on financial matters, and who possesses actuarial qualifications second to none in any country. He said: "In discussing the system of

"Government Annuities with my friends "from time to time, I have always frankly "stated that in my opinion the benefits offered for the rates charged are exceedingly liberal, and that I do not know of "any institution which could possibly afford "to offer terms so advantageous. If the "general working population of Canada were "able to realize the favourable basis on "which Annuities could be secured from the "Government, there would be very few "among the thrifty and thoughtful who "would not take advantage thereof."

A matter which has become almost a nightmare to employers is that of the labour turnover which occurs in the first two or three years of employment, namely, that restless desire to move from place to place which seems to periodically attack young unmarried men, though the wages paid to them are as high as those paid elsewhere for the same class of work. It is believed that the introduction and operation of the Government System of providing for their retirement, 'when their day's work is done,' would go a long way to put a quietus on this practice. It is further believed that the adoption of the system would promote closer relations between employer and employee, and would do much to secure that continuity of service so necessary to the successful operation of any industry and, therefore, would be in the interest of both employer and employee alike.

The system has everything to commend it. There is nothing experimental about it. The results are certain. The benefits are calculated on what is approximately a 5 per cent compound interest basis, and any scheme based upon it would be absolutely solvent. It has the security of the whole of the Dominion of Canada behind it. It would be free from all cost of administration, which would be borne by the Government. There are no forfeitures. If for any reason payments are interrupted, they may be resumed at any time, and if not resumed the annuitant will receive at the date fixed for the contract to mature such annuity as the payments made will purchase. The Annuity cannot be alienated or anticipated. It cannot be seized or levied upon by the process of any court. The contract is not transferable, so that no matter what pressure may be brought upon an annuitant he cannot be deprived of his annuity. It is positively the only plan of saving which will enable a man (or woman) to spend his capital as well as his income without his income becoming smaller no matter how long he may live, and it is only by such a system of investment that a wage-earner may expect to provide a competency for old age. Another important consideration is that, the contract being with the Government, the employee will have no cause for anxiety about the payment of the annuity

when it becomes due, and no matter where he may reside, or how long he may live, the annuity will be paid to him every month. The system is most elastic, and it has been very properly described by an American writer on economic subjects as "the savings bank, the insurance policy, and the endowment bond rolled into one." What better plan should be required or desired?

An annuity of any amount from \$50 to \$5,000 may be purchased to begin at any age desired. The age fixed will probably be the age when the employee may be expected to be no longer able to render a fair day's work for a fair day's pay, or when he may naturally wish to be relieved from arduous toil, usually at 65. But the time of retirement will probably have to be determined by the nature of the work engaged in, men in some occupations being, as is well known, old at 55, while in others a man may be able to render useful service even up to 70. But unless some systematic plan of saving, such as is provided by the Annuities Act is adopted, the large proportion of employees will reach the end of productive life without having accumulated any means of support.

The plan of purchase would be a matter of arrangement. A contributory system should commend itself to both. In that way the employer would be free from any suspicion that he had some ulterior object in view in advocating the plan, and the employee would appreciate to a greater extent that which had cost him something to obtain. He could authorize his employer to deduct from his weekly wage his share of the amount ascertained to be necessary to be paid to secure the annuity aimed at, the premium rate for the whole term being the rate paid at the age of commencement.

Under the Immediate Annuity System provision could be made for those old employees who have now reached the retirement age, and who are from years of faithful service entitled to friendly consideration.

With the tables which have been prepared, and of which a copy will be found with the booklet which has been distributed, any employer will be able to calculate what the annual cost would be of carrying any number of men, or this would be calculated for him by the Department if the necessary data as to ages (last birthday) and the sex of the employees is furnished.

To illustrate the application of the system, I shall give you as an example the case of a young man of 20 desiring to secure at 65 an annuity of \$25 a month to be paid to him from 65 as long as he lives, with, in case of his death before the annuity becomes payable, a return to his heirs of the payments made by or for him plus 4 per cent compound interest. The weekly payment in his case would be 40 cents, or on a 50-50 basis 20 cents by the employer and 20 cents by the employee. For a man of 25 the weekly rate would be 26 cents each; for a man of 30, 34 cents each; and for a man of 35, 45 cents each, the rate increasing as the accumulative period shortens.

If the man of 20 died at 64 his heirs would receive a lump sum payment of \$2,570.66.

The Department will be glad to supply any employer contemplating the introduction of the system with the necessary explanatory literature for distribution among his employees, as it is most important that they should have a thorough knowledge of the proposition before entering upon it.

---

## ANNUAL REPORT OF ALBERTA BUREAU OF LABOUR.

**V**ALUABLE information on industry and labour in Alberta is given in the annual report of the Labour Bureau, a branch of the Department of Public Works of the province. The Alberta Bureau of Labour has a wide field of action, being charged with the duty of administering the provincial employment bureau and offices and the Minimum Wage, Boiler and Factories Acts, besides licensing moving picture operators and apprentices and inspecting theatres.

Information was secured from employers relating to wages, working hours, payroll and the nationality of workers employed in the province during the twelve months from November 1, 1921, to October 31, 1922. Returns received from 900 firms covered 23,746 male employees over and 386 under 18 years of age, 2,243 female employees over, and 186 under 18, and 241 apprentices. The total payroll of these firms, for salaries and wages, was \$23,368,633, of which sum \$20,465,395 was paid to wage earners. Of the male em-

ployees 14,655 were on the payroll in November, 1921, and a gradual decrease was shown in each succeeding month until April, 1922, when the total was 10,468. Decided increases followed in each subsequent month until September, when the total was 23,717. In October there was once more a decline, the male employees numbering 16,318 in that month. Allowing for special circumstances, such as the closing down of the mining industry and the employment of large numbers for short periods on farms, it is estimated that in Alberta there are approximately 25,900 employable persons upon whom the industries of the province may draw at busy times, but for all of whom there is not a constant need.

The office of the chief factory inspector was moved during the year from Calgary to Edmonton, and other changes resulted from the placing of this branch under the Labour Bureau. The factory inspectors, in addition to their own duties, arranged for sessions to be held by the recently appointed Minimum Wage Board at Edmonton, Calgary, Medicine Hat, Lethbridge, Drumheller and Wetaskiwin, and secured witnesses to appear before the Board in the interest of both parties. The number of factories inspected during 1922 was 2,136, employing 14,400

workers, of whom 10,108 were male and 4,292 were female. Numerous recommendations were made as the result of these inspections, the points of criticism being mainly in regard to safety provisions, such as the guarding of machinery, keeping exits and fire-escapes clear; to health provisions including ventilation and sanitation; and to the regulating of shifts, hours and wages, so as to comply with the requirements of the Factories and Minimum Wage Acts.

Only two violations of the child labour provisions of the Factories Act were found by the inspectors during the year, and both of these cases were adjusted.

The report on steam boilers inspection shows an increase of 212 inspections in 1922 over 1921, the weekly returns aggregating a total of 2,290 completed inspections. In connection with a fire at Drumheller where six boilers were affected the report says "It was interesting to note how three of the large boilers and main steam piping attached had been protected against the high temperatures of the fire by the magnesia covering, which proved to be an efficient insulator and a cheap means of insurance against such fires."

---

### MINIMUM WAGES FOR FEMALE EMPLOYEES IN ONTARIO.

Orders of Board respecting the wages of female workers (a) in hotels, restaurants, etc., in Toronto; (b) in boot, shoe and leather industry in Ontario.

**T**WO new orders were issued during the past month by the Minimum Wage Board of Ontario to become effective on September 1, 1923. The first governs the wages paid to female workers in hotels, restaurants and refreshment rooms in Toronto, and the second the wages paid to female employees in boot and shoe manufacturing and in all trades engaged in the manufacture of any sort of leather goods.

*Hotels, Restaurants and Refreshment Rooms.* — The new regulations provide that no female employee in these occupations in Toronto shall be paid less than \$12.50 per week. Employees who work 36 hours per week or longer are entitled to this rate, and those who work less than 36 hours per week must be paid at the rate of 25 cents per hour. Employees who work for more than 50 hours per week are to be paid at least

25 per hour for all the time beyond that number of hours. No reduction of these rates for apprentices is permitted. Charges for lodging must not be in excess of \$2 per week, for board in excess of \$5 per week, or for single meals in excess of 25 cents per meal. Deductions for absence must not exceed the value of the time lost. Employees required to wait on the premises must be paid for the time thus spent. Every establishment affected by the order must

keep a copy of it conspicuously posted on the premises.

*Boot, Shoe and Leather Workers. —*

The regulations respecting the wages to be paid to female employees in the manufacture of boots, shoes and leather goods are practically identical with those respecting wages in the needle trades (LABOUR GAZETTE, September, 1922, page 991), the minimum scales being as shown in the accompanying table.

MINIMUM WAGES OF FEMALE EMPLOYEES IN  
BOOT, SHOE AND LEATHER FACTORIES  
IN ONTARIO

Class of worker	Toronto	Cities of 30,000 population (except Toronto)	Cities and towns having from 5,000 to 30,000 pp.	Rest of Ontario
Experienced adults.....	\$12.50	\$11.50	\$11.00	\$10.00
Inexperienced adults—				
1st 6 months.....	10.00	9.50	9.00	8.00
2nd 6 months.....	11.00	10.50	10.00	9.00
Girls under 18 years—				
1st 6 months.....	8.00	8.00	7.00	6.00
2nd 6 months.....	9.00	9.00	8.50	7.50
3rd 6 months.....	10.00	10.00	10.00	9.00

The present order, however, differs from the order respecting needle workers in the section governing piece-workers, which is as follows:

“The wages paid to each time-worker and to each piece worker during the first six months employment in the industry shall conform to this order. In the case of piece workers of more than six months experience it is sufficient if at least 80 per cent receive wages conformable to this order.”

The section regarding waiting, besides providing that an employee required to wait on the premises shall be paid for the time thus spent, requires further that piece workers shall be paid at a rate not less than that fixed for the class to which they belong.

## INTERIM REPORT OF DOMINION FUEL BOARD.

THE Dominion Fuel Board has issued an interim report which covers mainly a statement of the broad facts relating to Canada's past and present position in regard to fuel supplies, with a review of the various methods now advanced for strengthening that position, and of the investigations planned or already initiated by the Board to ascertain the practical value of every promising source of permanent relief. In the foreword to the report it is pointed out that the primary purpose of the Dominion Fuel Board is to institute a thorough study of the underlying causes of recurring coal shortages and of the

methods by which they may be counteracted.

Although Canada has a present coal consumption of about 32 million tons annually as against known reserves of 1,234,269 million metric tons, the populous industrial section of Ontario and Quebec is dependent on the great coal regions of the United States only a few hundred miles away. While there are ample reserves of United States bituminous coal, described as practically inexhaustible, the anthracite area covering only 484 square miles has reserves that at the present rate of consumption

will last only from 80 to 100 years. It is stated in the report that the coal fields in the small section of this latter area from which Canada draws her supplies are estimated to last at the present rate of consumption not more than thirty-six years.

The crucial problem is provision of fuel for domestic heating, as there is always the contingency of the supply of anthracite from the United States being cut off. The ideal solution would be to make it possible to depend entirely on our own fuel resources, and in the opinion of the Board this may be accomplished to a greater degree than is now popularly thought to be possible. The Board suggests that if the bituminous coal from Nova Scotia and New Brunswick were used in the making of domestic coke, partly displacing United States bituminous, it could materially assist in the solution of the domestic fuel problem. With regard to the coal of both the Maritime provinces and Alberta the crucial problem is one of transportation costs. A rate of \$9 a ton was named by Sir Henry Thornton, President of the Canadian National Railways, for trainload lots from Alberta to Ontario during May, June and July. Some further reduction may be possible by the use of the lake and rail route, but distribution charges and the price at the mine, the report states, will also have to be materially reduced before any large movement of Alberta coal may be expected.

The Board is making arrangements to have a thorough survey made of the deposits of suitable coal that can be made available for the central Canada market. It is convinced of the importance of an investigation into the feasibility of establishing by-product recovery coking plants in the larger centres of population for the purpose of producing coke for domestic heating, and has decided to employ an expert to report upon the matter. Ontario and Quebec are estimated to have available

water power to the extent of nearly twelve million horse-power, of which slightly less than two and a half million has been developed. The Board is of the opinion that electric house heating is impracticable on a large scale on account of the large amount of power it would take and its cost. Its use for industrial and transportation purposes, however, would set free a large amount of coal for heating.

Attention is directed to the importance of Canada's peat resources. It is estimated that Canada has an area of 37,000 square miles overlain by peat logs, of which the central provinces Manitoba, Ontario, Quebec and New Brunswick have 12,000 square miles. This 12,000 square miles will produce an equivalent in heating value to 5,400,000,000 tons of good coal. Experiments conducted by the Dominion and Ontario governments at Alfred, Ontario, have produced a high grade peat fuel, which is satisfactory for domestic furnaces in the spring and autumn, and for use in grates and cook stoves at all seasons. The Board is of the opinion that peat should be utilized to supply a part of the fuel needs of Central Canada, and if the results accomplished at Alfred are not sufficient to attract capital further encouragement should be given to the industry by the governments concerned. The chief drawback to the use of peat is its bulkiness.

A further fuel resource in Canada is in the supply of wood, especially hardwood. It is estimated that Eastern Canada has about 150 millions cords of hardwood. Wood comprises about one-quarter of the per capita fuel consumption in Canada, and under proper management the Board has no doubt that our wood resources could be utilized to a greater degree than at present. Municipal forests on land unsuitable for farming could be established in many places, and better use could be made of waste from sawmills and other wood-

using factories. According to the Board an important development in utilizing this material by carbonizing and briquetting has recently been put into practice in the State of Washington. The possibility of petroleum and natural gas resources of Canada assisting appreciably in the solution of the fuel problem is not considered bright.

The chief foreign sources of fuel supply other than United States anthracite are the anthracite coal fields of South Wales and the bituminous coal fields of the United States. In several cities, the use of Welsh coal materially helped to relieve the shortage last winter. It is of better quality than the Pennsylvania anthracite but breaks up more easily. It is understood that Welsh coal firms are considering shipping to St. Lawrence River points and building sizing and screen facilities there.

The Board announces that they are making arrangements to continue investigations which have been carried out by the Mines Branch in regard to the extent to which pulverized fuel can be used in Canada, and to conduct an investigation under the supervision of an expert into the advisability of establishing central heating plants in centres of population. It is also the intention of the Board to educate consumers to utilize more fully the fuel they are able to obtain, by the insulation of heat pipes, the use of weather-stripping for doors and windows, proper methods of managing furnaces and better house building, and to combat what the Board calls the unreasonable prejudice of consumers against giving a fair trial to substitutes for anthracite.

### MINERAL PRODUCTION OF CANADA FOR 1921.

**A** REPORT on the mineral production of Canada for the calendar year 1921 has recently been issued by the Dominion Bureau of Statistics. An earlier report dealing with coal mining in the province in 1921, prepared by the Bureau, was reviewed in the LABOUR GAZETTE for March 1922 on page 323.

The aggregate value of the minerals produced during 1921 reached a total of \$171,923,342, as compared with \$227,859,665 in the preceding year, and comprised metallics valued at \$49,343,232; non-metallics, \$87,842,682; and structural materials and clay products, \$34,737,428. The principal mineral producing province of Canada was Ontario, the value of its mineral production being determined as \$57,356,651. British Columbia came second, with a mineral production valued at \$33,230,460; Alberta third, with \$30,562,229, Nova Scotia fourth, with \$28,912,111;

Quebec fifth, with \$15,157,094; and Manitoba, New Brunswick, Yukon Territory and Saskatchewan followed in the order named, with productions between one and two million dollars each. Seventeen products contributed 98 per cent of the total recorded value of the mineral production, and in order of values assigned these were: coal, gold, portland cement, clay products, silver, nickel, stone, copper, asbestos, natural gas, lead, lime, sand and gravel, zinc, iron, gypsum and salt. Production values of these commodities ranged from \$72,451,656 for coal down to \$1,673,685 for salt. Decreases were shown in the quantities produced of all minerals, structural materials and clay products, except gold, lead, corundum, natro-alunite, natural gas, salt, phosphate, tripolite, pottery, sewer pipe, terra-cotta and tile other than drain, and slate. The output of coal during 1921 was 15,057,498 tons as compared with 16,631,954 tons in 1920

## SUMMARY OF PRINCIPAL STATISTICS RELATIVE TO MINING, METALLURGY, STRUCTURAL MATERIALS AND CLAY PRODUCTS INDUSTRIES OPERATING PLANTS, 1921

a. Excluding capital invested by Consolidated Mining and Smelting Company, Trail; and Kingdon Smelter, Galetta.

b. Excluding capital invested by Granby Consolidated Mining and Smelting and Power Company, Anxox.

c. Estimate, Incorporated companies in Yukon Territory paid \$624,733 in wages. Does not include wages paid in British Columbia.

d. Includes 3 silver smelters South Ontario; 5 plants nickel-copper smelters and refineries in Ontario and Quebec; 6 plants copper, lead and zinc smelters, Ontario and British Columbia, and refineries in British Columbia and Ontario.

e. Represents value of pig iron made from Canadian ore, deducting the net value of ores treated.

f. Includes production of Yukon Territory, 82,394 crude ounces valued at \$16.30 per ounce and production for British Columbia valued at \$233,200.

g. Number of wells.

h. Incorporated companies over Yukon Territory.

i. Includes actinolite, barytes, chromite, corundum, magnesium, sulphate, manganese, mineral waters, peat, pyrites, sodium sulphate and tripolite.

k. Includes stone quarries and sand and gravel.

m. Number of active operators only.

n. Does not include railway ballast operators.

The value of the metallic production as given in this table is approximately one million dollars less than the figure given in the first part of this report as the value of the metallic mineral production. The latter is the value calculated from the viewpoint of the world's markets while the data shown above indicate more nearly the actual return to different industries in question.

and the output of gold was 926,329 fine ounces with an aggregate value of \$19,148,920 as compared with 765,007 ounces with a value of \$15,814,098 in 1920. A summary of some of the principal statistics for the year 1921 is given in accompanying table.

The cost of material used in the industry amounted to \$14,285,182, and the total expenditures to \$140,942,602.

Further details with regard to time in operation, man-days' work done and wages in the various industries are also contained in the report.

MINING OPERATIONS IN BRITISH COLUMBIA, ALBERTA AND QUEBEC DURING 1922.

British Columbia.

THE annual report of the Minister of Mines of British Columbia for the year 1922 gives the following figures as to the quantities and value of the mineral products of the province for the years 1920, 1921 and 1922.

	1920		1921		1922	
	Quantity	Value	Quantity	Value	Quantity	Value
		\$		\$		\$
Gold placer.....oz.	11,060	221,600	11,660	233,200	18,240	364,800

		\$35,543,084		\$28,066,641		\$35,158,843

The output for 1922 exceeded that of any year in the history of the province excepting 1916, 1918 and 1920. The figures for 1916 and 1918 were \$42,290,462 and \$41,782,474 respectively. The production in these years was attributed to the war-time stimulus of output and war-time prices of the metals. There was mined in the various collieries of the province, during 1922, 2,580,915 tons (2,240 pounds) of coal but of this amount 69,072 tons was used in the manufacture of coke. The accompanying table shows the number of men employed in the collieries during the year.

During 1922 seventy-three examinations were held for candidates for certificates of competency as coal-miners and 438 certificates issued, also a number of duplicate certificates were issued to miners who had lost their original certificates of competency.

The number of tons mined per employee was 388 and per underground

White men	Under ground	Above ground	Total
Supervisors and clerks.....	249	168	417
Miners.....	2,218		2,218
Helpers.....	158		158

Helpers.....	65		65
Labourers.....	268	308	576
Total employed.....	4,712	1,932	6,644

employee 547 while these figures for 1921 were 373 and 544 tons respectively. During the year mining machines produced 118,650 tons of coal, or 4.59 per cent of the whole. This is a decrease compared with the amount of machine-mined coal in 1921, when

the percentage was 5.16. The number of tons of coal per pound of explosive used was 3.99. Particulars with regard to the average daily wages paid in certain districts are also contained in the report.

The fatalities in and around the collieries during the year totalled 31 as compared with 10 in the previous year. The ratio of accidents per 1,000 persons employed was 4.66, compared with 1.45 in 1921, 2.67 in 1920, 2.10 in 1919, 5.15 in 1918, and 8.51 in 1917. The ratio for the last ten years was 4.74. Twenty deaths were due to explosions, 18 lives being lost at Cumberland due to the formation of an arc when an electric-power cable was broken by debris from a broken shot (see LABOUR GAZETTE, October 1922), and two at Wakesiah when a fireboss attempted to dislodge inflammable gas from the brushing-face of a long wall place by means of compressed air. Four deaths were caused by falls of roof and rock, three by falls of coal, two by outbursts of coal and gas, one by mine cars and haulage and one was due to asphyxiation. The number of tons of coal mined per fatal accident during 1922 was 83,255 compared with 256,963 in 1921.

There were six fatalities in the metalliferous mines in 1922 among 2,110 employees. The fatalities in 1921 numbered three. The ratio of fatal accidents per 1,000 persons employed was 2.84, compared with 1.43 in 1921, and the ratio for the last ten year period was 3.02. Two deaths were due to falls of ground, one to mine car and haulage, one to a powder explosion, one to being crushed by skip in shaft, and for one the cause is not reported. The output from the metalliferous mines in 1922 was 1,573,186 tons compared with 1,562,645 tons in 1921. The number of tons of ore mined for each fatal accident was 262,197 tons in 1922 and 520,881 tons in 1921.

The report states that mine-rescue work is well organized in all the mining centres and the more important operating companies are each keeping several teams in readiness to meet any emergency. These teams undergo a two-hour period of training each week in the use of the rescue apparatus. The training period is generally carried out in the men's own time; the individual companies each paying their men for the extra work and time involved. Interest and instruction is maintained in both mine-rescue and first-aid work by the various mine safety associations. The Vancouver Island Mine Safety Association and the East Kootenay Mine Safety Association each hold an open competition once each year, which is somewhat international in scope as well as interprovincial, as occasionally Washington and Alberta teams are competitors. The larger companies all hold first-aid competitions annually and there is much rivalry between the competing teams. In 1922, the Mines Department presentation shield for the most successful team using the mine-rescue apparatus was won by No. 1 team of the Western Fuel Corporation of Canada, Nanaimo, second place was awarded to No. 3 team Canadian Collieries, Extension, and third place to the No. 2 team, Nanaimo. The Mines Department first-aid cup was won by Joseph Barton's team. The Wallace-Nesbit trophy competed for by junior teams in Canada was won by a Nanaimo team. The provincial Department of Mines maintains four rescue stations with fully qualified instructors in each. Rescue apparatus and supplies are kept ready for emergency work in each station. Thirty-five persons received mine rescue certificates in 1922.

There were 22 prosecutions under the Coal Mines Regulation Act.

#### Alberta.

The annual report of the Mines Branch of the province of Alberta for

the calendar year 1922 shows that two shale mines and 379 coal mines were in operation. One hundred new mines were opened, 9 mines were re-opened, 57 mines were temporarily closed and 44 mines were abandoned. A strike affecting all the larger mines in the province lasted for a period of five months. The production of coal, however, exceeded the production for 1921 by 39,327 tons. In October, 926,886 tons were produced, which was the largest monthly production at any time in Alberta. The production for 1922 amounted to 5,976,432 tons, of which 3,086,669 tons were produced in the domestic field, 635,073 in the sub-bituminous field, 2,214,273 in the bituminous field and 40,417 in the anthracite field. The output of briquettes was 33,663 tons and of shale for making bricks 10,851 tons. The value of the mineral production was estimated at \$25,717,577\* of which gold amounted to \$253; coal, \$22,208,627; natural gas, \$1,525,000; petroleum, \$50,631; and structural materials and clay products \$1,933,066. The value of the mineral production for 1921 was \$30,562,229. Shipments of coal from Alberta to other provinces in Canada, except British Columbia, showed a decrease from the year 1921, and importations from the United States to points east of British Columbia in Western Canada showed a decrease of 928,985 tons below the importations for the year 1921. The total average number of men employed was 8,747 and the tons of coal mined per man employed were 683; the average number of men employed underground was 6,154 and the tons of coal mined per man employed underground, 971. In the anthracite field the average number of men employed was 112, the number of tons of coal mined per man employed, 361, the aver-

age number of men employed underground, 41, and the tons of coal produced per man employed underground, 986. The first quarter of the year showed the greatest number of men employed in the anthracite field while in the other fields the last quarter showed the greatest employment. On December 31, there were 12,737 men employed, 9,109 underground and 3,428 above ground; only 75 men were employed in the anthracite field. The average days worked in the domestic field during the year was 197.13; in the sub-bituminous, 204.23, in the bituminous, 265.20, and in the anthracite 151. There were 84 prosecutions under The Mines Act.

Two mine surveyors' certificates, 322 provisional overmen's certificates, 62 third-class certificates and 9 second-class certificates were issued during the year. No first-class certificates were issued. Up to December 31, 1922, there were issued in the province 792 third-class, 336 second class, 201 first class and 163 mine surveyors' certificates.

During 1922, 35 persons lost their lives through accidents as compared with 21 in the previous year. This was the greatest loss of life in the mines of Alberta in any year during the period from 1906 to 1922, inclusive, with the exception of 1910 and 1914 when 31 deaths and 189 deaths respectively were due to the Bellevue and Hillcrest explosions. The fatalities in these years numbered 61 and 209. Of the 35 fatalities in 1922, 6 occurred above ground and 29 below ground. The heaviest accident record was shown during the last four months of the year when employment was greatest. There were no fatalities in the anthracite field. The following table shows the accidents reported during 1922, classified according to the coal field in which they occurred:

(\*) Subject to revision.

	Output	Accidents			Tons of coal mined per accident		
		Fatal	Serious	Slight	Fatal	Serious	Slight
Domestic .....	tons 3,086,669	18	15	25	171,481	205,777	122,267
Sub-bituminous .....	635,073	7	1	3	90,725	635,073	211,691
Bituminous .....	2,214,273	10	22	7	221,427	100,649	316,325
Anthracite .....	40,417						

A tabulated list of the accidents above and below ground and their causes is given as follows:

Cause	Fatal		Serious		Slight		Total
	Above ground	Below ground	Above ground	Below ground	Above ground	Below ground	
Haulage .....		4	1	12		9	26
Falls of rock .....	1	10		7		5	23
Falls of coal .....	1	6		3		2	12
Shot firing .....				7		6	13
Explosion in powder magazine ..	2				2		4
Shaft accidents .....		4		2			6
Asphyxiation .....		3				2	5
Ignition of gas .....		2		1			3
Electric coal cutting machine ..				1		1	1
Fire in buildings on surface .....	2						2
Pumping machinery .....			1				1
Railway cars .....			1				1
Struck by piece of coal from chute .....						1	1
Teaming .....			1				1
Miscellaneous .....			2		2	5	9
Total .....	6	29	6	32	4	31	108

### Quebec.

The annual report of the Department of Colonization, Mines and Fisheries of the province of Quebec, on mining operations during the calendar year, 1922, shows an increase in production of \$2,-812,165 or 18.1 per cent as compared with the previous year, the increase being from \$15,522,988 to \$18,335,153. There was an adequate supply of labour and the industry was remarkably free from labour disputes. The accompanying table shows for each mineral product in Quebec the actual number of workers engaged, the wages paid and the quantities produced in 1922.

As shown in the above table, the total wages paid during the year amounted to \$5,714,432 which is a decrease of 19 per cent as compared with the previous year's figures of \$6,300,204. In 1922

the sum was divided as follows: \$2,-682,541 to men employed in the mines and \$3,031,891 to men employed in the quarries as compared with \$3,444,336 and \$2,855,863 respectively for the previous year. The decrease in the total paid to men employed in the Quebec mineral industry is stated to be mainly due to the decrease in the rate of wages paid by the operators of asbestos mines. The average yearly earnings for a 300-day year in the mines and quarries during 1922 amounted to \$971 as compared with \$1,-320 for 1921. The asbestos labourers' wages were reduced from 41½ cents an hour in 1921 to 25 cents. Corresponding reductions prevailed for unskilled labour in the quarries. The reductions for skilled labour were less proportionately.

## MINERAL PRODUCTION IN QUEBEC IN 1922

Substances	No. of workmen	Wages	Quantities	Value in 1922
		\$		\$
Asbestos, tons.....	2,993	2,300,593	163,339	6,053,068

The following table shows the actual number of workers employed in the mines, quarries and connected plants

during 1922; also the number of workers calculated on a 300-day basis for the years 1921 and 1922:

Mines, quarries and plants	No of men 1922	Number or men calculated on 300 day basis	
		1921	1922
Asbestos (quarries and mills).....	2,993	1,920	2,246
Copper and pyrite, silver, gold.....	66	31	56
Chrome (mines and mills).....	20	40	2
Feldspar, kaolin (mines and mills).....	167	66	88
Graphite, mica, phosphate (mines and mills).....	182	59	102
Magnesite, dolomite.....	169	104	102
Marl.....		4	
Mineral paints, ochre (pits and mills).....	84	35	56
Mineral water (springs and works).....	6	3	1
Molybdenite.....	7	5	5
Quartz and silica rock (quarries and mills).....	46	15	22
Talc.....	16		4
Titaniferous iron ore, zinc and lead.....	15	33	5
Brick, pottery, (clay pits and plants).....	967	370	650
Cement (quarries and works).....	570	783	523
Granite (quarries and works).....	523	188	345
Lime (quarries and kilns).....	252	131	254
Limestone (quarries and dressing works).....	1,342	799	1,164
Marble, slate, sandstone (quarries and works).....	194	122	137
Sand (pit and river sand).....	189	65	123
Totals .....	7,808	4,773	5,885

Of the 5,885 men calculated on a 300-day basis who found employment during the year, 2,689 worked in the mines and 3,196 worked in the quarries.

In 1922, there were 272 accidents among mine and quarry workers of which 16 were fatal. In the previous year 213 accidents were reported of

which 12 were fatal. The ratio of accidents per 1,000 men employed during 1922 was 46 as compared with 44.6 in 1921. The 16 fatal accidents recorded in 1922 give a proportion of 2.72 per 1,000 men employed. This figure was 4.5, 1.67, 3.36 and 2.51 respectively for 1918, 1919, 1920 and 1921. In the mines the rate was 4.09 of fatalities, and in the quarries, where the risks of accidents are appreciably less it was 1.56. Fifty-six of the 256 non-fatal accidents occurred to employees in the connected plants, 4 fatal and 29 non-fatal occurred in pits at the quarries, and one fatal and 8 non-fatal at the surface of the quarries, 10 non-fatal occurred underground in the mines, one fatal and 34 non-fatal at the surface of the mines, and 10 fatal and 119 non-fatal occurred in the open pits at the mines. Of the 16 fatal accidents 13 are ascribed to the fall of loose rock accidentally detached from the side of open pits or faces of open workings, one was due to a cable-derrick, one to explosives and one to electricity. Among the non-fatal accidents 58 were due to falls and slides of rock, 38 to railroads, 22 to derricks, 18 to locomotive cranes, 29 to falls of persons, 12 to falling objects, and 9 to explosives.

The report draws attention to the dangers incident to overhanging walls in mineral deposits, possessing parallel walls and dipping more or less steeply, and it is pointed out that the serpentine under the hanging wall should not be withdrawn, or if it must be mined, then the overhanging country rock must be brought down, and have a straight face, without any overhanging ledges. Undermining in sand and clay pits, it is claimed, should be absolutely forbidden and foremen should see to it that all frozen overburden, either overhanging, or bordering the edge of open pits, is removed before undertaking work of any kind in the vicinity.

Special attention is drawn to the safety work being carried on by the Canadian Johns-Manville and the Canada Cement Company. The latter company it is stated keeps before the men the causes of accidents and by competition and awards stimulates the co-operation of the men. After a campaign of one and a half years the records of this company show in the frequency factor of accidents a reduction from 11.1 to 2.8.

---

### FATAL INDUSTRIAL ACCIDENTS IN MINES OF CANADA DURING THE TEN YEAR PERIOD, 1913 TO 1922.

**T**HE following summary of fatalities in the mines of Canada deals particularly with fatal accidents reported by the Mines Department of British Columbia, Alberta, Ontario, Quebec and Nova Scotia. The figures for British Columbia represent the annual compilations of the Workmen's Compensation Board of the province and contain separate information with regard to coal and metalliferous mining. In Alberta and Nova Scotia, the figures refer to accidents in coal mines only, while those for Ontario and Quebec comprise accidents in the mines, me-

tallurgical works and quarries; no coal is mined in either of these provinces. In Quebec, the figures showing the number of persons employed are on a 300-day basis. Further particulars regarding accidents in the mines of British Columbia, Alberta, and Quebec for the year 1922 will be found elsewhere in this issue, while an account of mining accidents in Ontario in 1922 is contained in the April issue of the LABOUR GAZETTE.

The following table shows the fatal accidents reported in each province

## FATALITIES IN THE MINES OF BRITISH COLUMBIA, ALBERTA, ONTARIO, QUEBEC AND NOVA SCOTIA, AND RATIO PER 1,000 MEN EMPLOYED

	1913		1914		1915		1916		1917

(a) Including 181 deaths caused by an explosion.

(b) Including 19 deaths by drowning and 22 deaths caused by an explosion.

(c) Including 12 deaths caused by an explosion.

(d) Including 34 deaths caused by one explosion and 4 by another.

(e) Including 65 deaths caused by an explosion.

(f) Including 16 deaths caused by the breaking of a hoisting cable on Protection shaft.

(g) Including 5 deaths caused by the fall of rock from roof of old stope.

(h) Including 88 deaths caused by an explosion.

(j) Including 18 deaths caused by an explosion.

and the ratio of fatal accidents per 1,000 men employed during the years 1913 to 1922.

The output of coal per fatal accident in Alberta during the years 1913 to 1922 (inclusive) was 152,798 tons in 1913; 18,286 in 1914; 190,827 in 1915; 232,430 in 1916; 202,642 in 1917; 279,483 in 1918; 239,162 in 1919; 238,733 in 1920; 282,721 in 1921; and 170,755 in 1922.

The output of coal per fatal accident in British Columbia during the years 1913 to 1922 (inclusive) was 95,213 tons in 1913; 106,527 in 1914; 37,935 in 1915; 88,770 in 1916; 54,539 in 1917; 92,098 in 1918; 200,745 in 1919; 158,633 in 1920 256,963 in 1921, and 83,255 in 1922. Figures for the output of metalliferous minerals per fatal accident are given only for the years 1915 to 1922. These figures are 134,505 tons for 1915, 159,443 for 1916, 162,446 for 1917, 241,-

070 for 1918, 352,162 for 1919, 435,637 for 1920, 520,881 for 1921, and 262,197 for 1922.

In the remaining provinces of Canada, Saskatchewan, Manitoba, and New Brunswick, the only information available is contained in the records of fatal industrial accidents in Canada which are printed quarterly and annually in the LABOUR GAZETTE. Figures for Yukon Territory are not given in these reports. The mineral production of these provinces is not so great as that of the other provinces nor are there nearly so many men employed, as will be seen from the summary of the annual report on the Mineral Production of Canada for 1921 on page 756 of this issue, where the number of wage earners given for that year are 721 for Saskatchewan, 752 for Manitoba, 914 for New Brunswick and 461 for the Yukon Territory, and the number of salaried employees in these provinces as 73, 51,

66 and 5 respectively. The following table shows the number of fatal accidents reported to the Department of Labour for the years 1919, 1920, 1921 and 1922, and the value of the mineral production during these years as reported by the Dominion Bureau of Statistics:

FATALITIES IN THE MINES OF SASKATCHEWAN, MANITOBA AND NEW BRUNSWICK DURING THE YEARS 1919, 1920, 1921 AND 1922 AND THE VALUES OF THE MINERAL PRODUCTION IN THESE YEARS

	1919		1920		1921		1922	
	No. of accid-ents	Value of production	No. of accid-ents	Value of production	No. of accid-ents	Value of production	No. of accid-ents	Value of production
Saskatchewan .....	1	\$ 1,521,964	.....	\$ 1,837,468	1	\$ 1,114,220	1	\$ 827,645
Manitoba .....	1	2,868,378	1	4,223,461	1	1,934,117	3	2,118,529
New Brunswick.....	.....	1,770,945	3	2,491,787	2	1,901,505	2	2,414,152
Total .....	2	6,161,287	4	7,552,716	4	3,949,842	6	5,360,326

The value of the mineral production of Yukon Territory during the last four years is given as follows: \$1,940,934 in 1919; \$1,576,726 in 1920; \$1,754,955 in 1921; and \$1,810,555 in 1922.

REPORT ON CERTAIN CHARGES AGAINST MEMBERS OF EDMONTON POLICE FORCE.

**I**N view of certain charges brought against members of the police force of Edmonton, Alberta, arising out of a strike of coal miners of the Penn mine in that city, the municipal council of Edmonton, on April 25, requested Mr. Justice Walsh to make inquiry into the alleged ill treatment of a number of women by the police near the mine on January 4. Mr. Justice Walsh submitted his report to the Council on June 11. The report states that on January 2, ninety strikers had been arrested by the city police and detained in custody on a charge of being members of an unlawful assembly, and on the following day twenty-nine more were arrested on a similar charge. On January 4, a meeting of the strikers' wives was held to arrange for the maintenance of children whose mothers were dead and whose fathers were in jail. After the meeting they decided to parade the streets. When the procession headed by the women approached the mine, the police endeavoured to prevent them from trespassing on the company's property. About ten of the women managed to get on the mine property. The police line was then tightened and the rest of the crowd were kept off. As to what took place then, Justice Walsh says: "The evidence for the complainants and the police is so evenly balanced, both as to the numbers and the disinterestedness of the witnesses, that if there were nothing to determine me as to which set of them I should accept I would feel obliged to say that the complainants have not discharged the burden of establishing their grievances and so hold them unproven. There are several considerations however which impel me to the conclusion that the evidence offered on behalf of the police should be accepted rather than that offered in support

of the charges against them and I therefore accept and act upon the same". The reasons given for accepting the evidence of the police were as follows: "The Supreme Court of this province has set upon the gathering of the complainants and their associates the brand of unlawfulness. Four of the men who participated in it were convicted in that court of being members of an unlawful assembly. . . . In addition convictions of acts of lawlessness were made against several of the individuals of whom it was composed. . . . I am satisfied that very many of the women who were in the crowd were in a state of hysteria which made them largely irresponsible at the time and renders them incapable now of giving reliable account of the events of which they speak."

With respect to the conduct of the police, Mr. Justice Walsh states: "In my judgment, Chief Shute and his men, and their associates of the Mounted Force, acted with good judgment and considerable moderation, under circumstances of great provocation, in a serious situation which was fraught with much danger. The feeling over the strike was very tense. Acts of lawlessness were on the increase. A firm hand was needed to keep within bounds the growing tendency to defy the law. That firm hand was applied in this instance, but with no unnecessary harshness".

Three questions were submitted by the Council: (1) Did the police force of the city of Edmonton or any member thereof, and if so what members, in the vicinity of the property known as the Penn Mine, in the city of Edmonton, Alberta, on the afternoon of January 4 last, attack, beat or in any way ill-treat a number of women or any women, and if so in what manner and to what extent? The answer was "No, with the single exception of the injuries, other than those to her knees, inflicted upon Mrs. Clarke by Constable Clarke, to which I have referred". (2) If so: (a) Was it wilful; (b) was it justified; (c) if justified was there provocation, and if so to what extent? The answer was that Mrs. Clarke's injuries were not wilfully inflicted, but were sustained by her in resisting her expulsion from the property, upon which she was trespassing. (3) Was the Chief Constable of the police force of the said city of Edmonton at said time and place under the influence of liquor? The reply was that not a particle of evidence was offered to justify even the asking of this question. The lawyer for the complainants stated that no charge of this character was made by his clients. It was explained that this question was submitted because of a statement contained in an affidavit which had been printed and largely circulated.

---

## NATIONAL CONFERENCE OF BRITISH LABOUR WOMEN

**T**HE National Conference of Labour Women of Great Britain was held at York, England, on May 8 and 9, under the presidency of Mrs. Harrison Bell, and was attended by 518 delegates representing women's sections of the labour parties, trades councils and trade unions, socialist societies and other organizations.

The second interim report on motherhood and endowment of the Joint Re-

search and Information Department of the Labour Party and the Trades Union Congress was presented and adopted. The first interim report which was adopted at Leamington last year (see LABOUR GAZETTE, August, 1922) was stated, apart from a very few cases, to have received unanimous support. It was announced that the final report was being prepared by the committee giving an account of its proposals for mothers'

pensions, provision for mother and child immediately before and after birth, maintenance allowances for all school children over fourteen, and other forms of provision for child welfare, together with an enquiry into schemes for motherhood and child endowment and their relation to these smaller schemes and to the general life of the community.

In a report on the education of children in the ideals of the labour movement and of peace, reference was made to the formation of what is called the "New Triple Alliance," composed of mothers, teachers and young workers, which was formed last December at a meeting called by the International Federation of Working Women on the occasion of the International Peace Congress which was held at the Hague by the International Federation of Trade Unions. The Alliance was formed as a first step toward the carrying out of the educational programme of the Congress, and various plans for the promotion of educational work for peace were recommended. By a resolution the National Conference of Women expressed satisfaction with what had been done in the matter, and urged the Labour Party to encourage the formation of young people's sections and to give prominence to anti-militarist teaching.

A resolution on unemployment was adopted in which the view was expressed that the present depression was mainly due to the foreign policy of present and past governments since the war. The resolution declared that full

maintenance should be provided for all workers for whom work could not immediately be found. The government was urged to put into operation the Education Acts of 1918 and to raise the school age universally, in view of the increasing number of juveniles for whom work could not be found. The conference condemned the inadequacy of the provisions of the Unemployment Insurance Acts and protested against certain regulations which had been issued under these Acts. It requested that the present Rent Restriction Acts be extended until 1925, that laws be passed permitting local authorities to make empty houses available for occupation, and enabling the government to control the cost and supply of building materials. The conference opposed any system calculated to weaken the existing machinery of the trade boards. It was decided to request the government to repeal the law providing for the two-shift system in industry, on the ground that it was inflicting hardships on women and girls. The government was urged to introduce legislation which would: (1) raise the age of whole-time school attendance to sixteen; (2) improve the standard of buildings, equipment, and staff in elementary schools; (3) provide for free secondary education; (4) provide adequate allowances for maintenance; (5) provide nursery schools for children from two years old; and (6) make adequate provision for the supply of dinners to children of school age.

## THE PRESENT POSITION OF THE FRENCH TRADE UNION MOVEMENT

---

THE May, 1923, issue of the *International Labour Review*, published by the International Labour Office (League of Nations), Geneva, contained an article by Charles Dulot on the present position of the French trade union movement, from which the following information was obtained.

As a consequence of the rupture in December, 1921, the French trade union movement has split up into two large organisations: the General Confederation of Labour, always known as the C.G.T. (*Confédération générale du travail*), and the General Confederation of United Labour, known as the C.G.T.U. (*Confédération générale du travail unitaire*). The two organizations are also absolutely apart internationally as well as nationally. The C.G.T.U. is affiliated with the Red Trade Union International of Moscow, while the C.G.T. has remained a member of the International Federation of Trade Unions at Amsterdam. It is difficult to determine the exact membership of these two bodies. Trade unionists are not very closely linked to their organizations, which still keep their traditional character of bodies established primarily for militant action. The result is that membership varies so much as to prevent statistical compilation. Groups of workers often join a union on the outbreak of a strike or are won over by a definite campaign for specified ends; these ends obtained, they stop paying their subscriptions, only to rejoin the same organization at a later date. An estimate of the membership of the old C.G.T., however, gives a figure of about 700,000. The membership of the C.G.T.U. is generally supposed not to exceed 300,000. To these two bodies must be added the French Confederation of Christian Workers (*Confédération française des travail-*

leurs chrétiens). This confederation unites the Catholic trade unions and has a membership of about 125,000. Another body drawing its membership of about 100,000 chiefly from among salaried employees, especially from among bank, stock exchange, and commercial clerks, has assumed the name of Independent (*Indépendante*). Mention only will suffice of the Reformist unions and of the National Confederation of Labour (*Confédération nationale du travail*); these bodies are of little influence or weight.

The General Confederation of Labour or C.G.T., which has the largest membership, is the traditional organ of French trade unionism. The policy of its representatives in the International Labour Organization is well known. It is guided by principles of internationalism and universal peace. The C.G.T. aims at helping on the reconstruction of a world thrown out of equilibrium by the war, and considers that the workers have here an important part to play; the force inherent in the world of labour is to be added to the legal force of the institution established by the Treaty of Versailles. Ever since 1919 members of the Confederation have been delegates at every International Labour Conference and session of the Governing Body and have at no time lost sight of the aims of their organization. The principal obstacle in the way of industrial legislation is, of course, the existing disparity in the distribution of raw materials and in the volume of production; the C.G.T. has, so far as in it lay, supported the enquiries into world production, unemployment, and other subjects conducted by the International Labour Office. In its own country it has endeavoured to make the usefulness of the Office known to the working classes, to defend it against attack, and

to get Draft Conventions carried out. The national and international policy of the C.G.T. are completely co-ordinated. French trade unionism, while not for a moment relaxing its insistence on the revolutionary ideal, is attaching more and more importance to a programme of reform, to industrial legislation, and to the study of those great economic problems towards the solution of which it wishes to contribute in order to further the progress of society. The C.G.T. is also making an effort once more to obtain the support of employees in state enterprises. Great disappointment was felt at the neutrality maintained by these workers in the dispute between the C.G.T. and its extremist elements. The Federation of Civil Servants, however, which was greatly weakened in 1921 in consequence of the action taken against it by the Government, but which has now been reconstituted apparently on a stronger basis, has no intention of re-affiliating with the C.G.T. Its aim is on its own initiative to secure the trade union rights at present refused to workers in government employ and its instrument will be an electoral policy which has already produced definite results. The neutral attitude adopted a year ago by the Federation is accordingly being maintained.

The General Confederation of United Labour or C.G.T.U. is far from displaying the same calmness of attitude which the old central organization has achieved. Its main problem since its establishment has been affiliation and general relations with Moscow. There has been

an increasing and implacable internal struggle between the Revolutionary Syndicalists and the Anarchists on the one side, and the Communists on the other. It has also attempted to establish a "united front" for the defence of the workers' interests with the General Confederation of Labour, but was met with a refusal to co-operate.

The claims of the Catholic trade union federation are not noticeably different from those of other trade unions, but it also has its own peculiar problems: its relations with the Church, with other workers' organizations, and with the employer, especially the Catholic employer.

Another of the main branches of trade unionism, "independent" or evolutionary syndicalism, is represented by the Council of Industrial Legislation and Labour. The aim of this body is the organisation of each industry by the creation of permanent joint committees corresponding to the local, regional, and national organizations of employers and workers.

M. Dulot's general sketch of the French trade union movement includes the picture of a C.G.T. freed of its extremist tendencies, still engaged in reforming both its material organization and its opinions; of a C.G.T.U. torn between Anarchist and Communist claims and ready for new ruptures; of a federation of workers in government employ who seem tending towards political action; finally, of a confederation of workers' unions, and of an independent federation organised on a strictly occupational basis.

## THE UMANITARIA SOCIETY OF MILAN, ITALY.

THE International Labour Office (League of Nations), Geneva, published in the issue of "Industrial and Labour Information" for June 1 an article by Mr. Rinaldo Rigola on the Umanitaria Society of Milan, which it states, is undoubtedly the foremost of the institutions of a social character which have contributed to the reconstruction of Italy during the past twenty years. The article is in part as follows.

The idea of founding a Society of the kind was first conceived by Mr. P. M. Loria, who was born in Mantua in 1814 and died at Milan in 1892. On his retirement from business, Mr. Loria, who was a wealthy widower without children, endeavoured to find some form of charitable work organized on new and original lines. In the course of his observations of society he had been struck particularly by the miserable spectacle offered by the large number of beggars and vagabonds to be seen in the streets. He conceived the idea of founding an institution to assist these unhappy creatures to find a profitable occupation and earn an honest living. He published some pamphlets explaining his scheme the most important part of which was to institute a "house of work" in which the outcasts of society would be provided with employment provisionally until permanent work could be found for them. Mr. Loria endeavoured, at first without success, to persuade the municipal authorities to take up the proposal and to contribute to the cost. At his death he bequeathed almost the whole of his fortune, about 10 million lire, for the purpose of founding the Umanitaria Society which he had suggested to the municipal authorities of Milan, the condition of the bequest being that the society should be founded as a legally incorporated institution before 31 December 1893. The municipality accepted the legacy and proceeded to take steps to found the Society. The relatives of the deceased, however, contested the will, and for that and other reasons the Society was unable to begin its work until 1902.

The Society is organised on a democratic basis. Membership is open to every body on payment of a small contribution, and all members take part in the working of the society... According to its rules "the object

of the Umanitaria Society is to give all the unfortunates and outcasts of society an opportunity of redemption by their own efforts, by giving them the assistance they require and providing them with work and means of instruction"... The rules also provide that the Umanitaria Society of Milan "shall endeavour to promote the institution of similar societies in other places. These societies shall be independent bodies grouped together on a federative basis and attached to the original society in Milan."

The legacy of the founder of the Society, though representing a large sum for the period, would have been inadequate for the requirements of the Society without the addition of a number of other donations from various benefactors, and the financial support received for certain specified purposes from various public and private charitable organizations. The Society has always devoted a considerable portion of its efforts to the spread of general education and technical training. Its activities in the purely labour sphere are, however, no less important.

The Society is under the management of a General Director who supervises the various departments and is responsible to the board of administration and to the presidency. The various branches of activity are assigned to "offices" or to special bodies of which the most important are: the employment office, the agrarian office, the information and translation bureau, the "house of work", the emigration office and emigrants' hostel, and the social institute.

Special committees are appointed to supervise the more important departments. These committees consist of members of the governing body and delegates of mutual societies, co-operative societies and trade unions. The officials are selected in conformity with the provisions of the legislation concerning charitable organizations.

The employment office of the Umanitaria Society was the first in Italy. It served as a model for the organization of the state employment office which was set up later. The office has undertaken a number of enquiries concerning the conditions of industrial and agricultural workers, housing, occupational diseases, home work, etc. It has published a number of monographs on special questions and has supplied a considerable quantity of statistical material to workers' organizations and students of social problems. It organized the "Employment Exchange Association",

instituted a system of unemployment benefit on the lines of the Ghent system, and was instrumental in organising the first international congress on unemployment which was held in Milan in 1906.

The agrarian office has done much to promote the development of co-operation amongst agricultural workers. The foundation of the Federation of Co-operative Societies of Production and Labour in the Province of Milan was due in large part to the efforts of the organs of the Umanitaria Society. It also contributed to the foundation of the Co-operative Credit Institute and many other similar institutions. The agrarian office has conducted many experiments for the solution of difficult social problems.

The information and translation bureau was instituted for the purpose of assisting trade unions and co-operative societies in their work, particularly in their relations with similar movements in foreign countries. The bureau receives publications from all countries and translates them into Italian for the benefit of associations to which they may be of use.

The "house of work" for many years provided easy work for unemployed persons without means of subsistence, while at the same time endeavouring to find work for them with private employers. The unemployed were thus placed out of reach of temptation and received a wage which, though small, enabled them at least to keep body and soul together for some time. The "House of work" has now been converted into a children's home.

The assistance of emigrants is a branch of the activities of the Society which has been carried on for many years and the value of which is generally recognized. The Society has a number of local offices throughout Italy, which are in touch with the head office and are supported by the latter. It has also branches at various points on the frontier, at port of embarkation, and in the main centres in the countries of immigration. There is an emigrants' hostel at Milan. The Society has done much to assist repatriated emigrants, the unemployed and war refugees . . . . .

The Social Institute is responsible for all work connected with the study of labour problems. It organises conferences on labour questions and entrusts to special committees or to individual students the task of investigating particular social phenomena, thus steadily increasing its store of scientific material. The Institute is open to all who require information on social questions . . . . Before the war it had organized a School of Social Legislation and courses of training for factory inspectors, managers of co-

operative societies, officials of mutual benefit societies and trade unions. These activities were resumed after the war and extended to many other cities in Italy as the result of an agreement concluded between the Umanitaria Society and the National Co-operative Credit Institute. The classes at headquarters were reorganized with a view to creating a university of labour on the model of the English labour colleges. Pupils from local schools and officials of the various organizations may be sent to the Milan School, which provides more advanced courses . . . .

The Umanitaria Society has achieved remarkable results in its efforts towards the education of young workers. Its aim is to inspire enthusiasm, stimulate the faculty of observation and to encourage individual research among the pupils, to promote self-education by leading pupils to realize the need and the possibility, both for themselves and for their craft, of continual striving after perfection, and to raise the technical standard and the level of culture of the masses, without dissociating technical training from social and general education.

With a view to realizing this programme, it has founded an electro-technical laboratory, a school of applied arts, a school for the printing trade and a school for the tailoring trade. It has contributed both financially and otherwise, to the foundation of a school for watchmakers, a school for chemical industries and the manufacture of soap, varnish and oils, etc., and a school for the paper-making industry. It has founded a school of vocational training for girls, with a view to replacing the apprenticeship system, which had proved unsatisfactory, and has instituted Sunday and evening courses of instruction in tailoring, dressmaking, embroidery and laundry work. In view of the increasing gravity of the apprenticeship problem and the fact that the technical training received by the worker in the factory is obviously inadequate, the Umanitaria Society instituted, as an experiment, a school of vocational training in wood-work and the manipulation of precious metals and iron. Later . . . . . the Umanitaria instituted courses of designing and manual work in the elementary schools, even before such courses were instituted by the municipality. It has also organized training courses for teachers . . . .

In addition to the educational activities enumerated, the Society has contributed indirectly to the spread of education by assisting other organizations which have been working for many years past with the same objects and with excellent results . . . .

The Society has also supported various schemes for the spread of general culture among the masses, with a view to supplement-

ing the instruction given in vocational schools and giving the workers an opportunity of general development which will at the same time increase their efficiency in their trade. It has contributed to the support of the People's University and to the foundation of the People's Libraries Association and the People's Theatre. Later a Federation of Popular Libraries was founded

and thanks to its untiring efforts and those of the Umanitaria Society, centres of culture have been formed throughout the whole of Italy. Books have penetrated even to the smallest and most remote villages, and a supply of intellectual food has been placed within the reach of those classes of the population which are least able to procure it for themselves.

## CONDITIONS OF LABOUR IN THE JAPANESE SPINNING INDUSTRY.

THE International Labour Review for May, published by the International Labour Office, contains a summary of a report on the spinning industry of Japan, which was made by the Kyocho Kai. This organization, the name of which signifies "the association for harmonious co-operation," is an association formed by Japanese employers and aided by a government grant for the study of social reform and industrial relations. The information in the present article was derived from this summary.

At the end of 1919 the spinning mills in Japan, including silk, cotton, jute and wool, numbered 240 and employed 232,06 wage earners. Of this number only 55,330 were male workers while 79 were girls between the ages of 10 and 12 years, 32,722 girls between 12 and 15, and 2,879 boys between 12 and 15.

For more than ten years factory owners have experienced difficulty in recruiting women workers. This is partly due to the increased demand for women workers consequent on the rapid progress of this industry, and partly to the short period of time which most of the women work. The recruiting of workers is done either through agents especially sent out for this purpose or through the personal connections of the workers already engaged. Roughly 62 per cent of the workers are recruited by the former method, which is a very expensive one, the expenditure incurred for recruitment through such agents being about 30

yen (about \$15) per head, including agents' fees, expenses in preparing for the new employment, and the travelling expenses of the worker. In addition, it is usually the custom to advance a sum of at least about 15 yen to each worker recruited. This system of advancing money to the workers at the time of their engagement was originally introduced with the object of keeping them at the factories, but it often leads them to wander from factory to factory without being able to pay off their debts. All workers recruited, after passing a medical examination and a general knowledge test, are asked to sign a formal contract with the employer, which in many cases is a unilateral one exempting the employer from any obligation and giving him the sole right of deciding the hours of work, wages, etc. In its form this contract is often like the oath of allegiance of the vassal to the lord.

According to the report, the labour turnover is very high and the term of employment generally very short, despite the fact that over two-fifths of the women employees and nearly one-fourth of the male workers live in dormitories attached to the factories. This labour turnover results in a low efficiency of the individual workers and a low efficiency of the factory owing to the constant necessity for re-arranging work; cost of administration and of recruitment also become very high. In order to avoid these evils, many factories are improving the wel-

fare provisions for the workers and are also granting various bonuses and allowances with the object of encouraging longer service.

Two shifts of twelve hours are generally adopted in the industry, except in the jute-spinning factories, where, owing to bad trade, night work has been abolished and the 12-hour system is adopted during the day time. Four days' rest per month are given where the factory is working on two shifts; but where there are only day operations, while some employers grant four rest days, others give only two. There is an increasing tendency to adopt the Sunday rest system.

Wages in the cotton-spinning industry are normally fixed on a daily basis for men workers and on piece rates for women workers, though sometimes a mixed system of time and piece rates is adopted. Time rates are also applied in the case of female apprentices and supervisors, while piece rates are also applied to male workers who are engaged in packing and certain other operations. In the case of women workers, piece rates are paid sometimes on an individual and sometimes on a collective basis. Some silk-spinning factories adopt the daily wage system for all workers and for all operations, while others adopt the piece-rate system for workers engaged in particular operations; in the former case a supplementary bonus system is arranged in order to avoid the inconvenience arising for the time-rate system. In jute-spinning factories the piece-rate system is generally adopted, and daily wages are given only to apprentices.

A beginner's wage in the cotton-spinning industry at present is from 0.45 to 0.60 yen per day for women and from 0.80 to 1.00 yen for men; increases of wages are given at the beginning of every quarter, amounting to 0.02 to 0.03 yen per day. When the beginner's wage reaches that of the ordinary worker, increases amounting

to 0.05 to 0.06 yen per day may be given once every year or half-year. In 1921, the average daily wage for women cottonspinners was roughly 1,093 yen and for men 1,452 yen.

In factories where there are a large number of women workers living in, provision is made for them to be supplied with daily necessities. Almost all factories make provision for medical treatment, which in many cases is not restricted to the workers but is available for their families. Diseases of the respiratory organs are common among dormitory workers, while diseases of the digestive organs occur frequently among the workers living outside the factory. The situation as regards tuberculosis among dormitory workers is improving, owing to better food conditions and shorter working hours, but it cannot be denied that this formidable disease is still causing great suffering among the women workers. A saving system is often adopted and generally compulsory for workers living in; the rate of interest allowed by the employers on the deposits varies from 6 to 10 per cent per year. Mutual aid societies are universally established, and it is rarely that a factory has nothing of the kind. The object of the mutual aid society is chiefly health insurance; benefits are usually paid for accident, sickness, childbirth, and sometimes on retirement from work or on the death of the worker or his family, or again on account of natural calamities. There are very few societies which receive no help from the employers, the latter giving sums varying from one-third to one-half of the total amount of the subscriptions received.

The report states that owing to the low standard of education and the slow progress of any feeling of self reliance among the women workers, very little headway has been made in the organization of the workers in the industry. The only union of spinning workers at present in existence in the country and affiliated to the General

Federation of Japanese Labour, has a membership of only 200. The factory committee system is rare, and the few committees established are really only bodies for communicating the decisions of the employer to the workers.

Some progress may be traced in the welfare provisions generally adopted throughout the industry, but with this

exception conditions in the spinning mills in Japan are said to be in every way primitive. Attention may be drawn to the influence which the adoption at the International Labour Conference of the Convention on the abolition of night work for women is beginning to exercise; a reform which some far-sighted employers are now advocating.

---

### THE EMPLOYMENT SITUATION DURING MAY, 1923, AS REPORTED BY EMPLOYERS.

THE volume of employment, as reported by employers of labour to the Dominion Bureau of Statistics at the end of May, showed another very large increase of a general character, approximately 47,000 workers being added to the staffs of the firms making returns. This expansion, which affected a slightly smaller number of workers than did the increases registered during May of last year, caused the curve in the accompanying chart to attain a point higher than at any period of 1922. Last year's peak was not reached until the end of October, and it may be expected that the curve, parallelling its 1922 course, will continue to rise steadily during the next few months.

An aggregate payroll of 800,605 workers was reported by the 5,865 firms making returns, who had employed 754,021 persons at the close of April. The index number, therefore, rose from 91.4 on April 30 to 97.3 for the month being surveyed; in May, 1922, it had stood at 89.2 and in 1921 at 86.6. The most pronounced increases were registered in the construction industries, in which nearly 19,000 persons found employment, and in manufacturing. Within the latter group, sawmills reported very marked expansion, and canneries, pulp, paper, iron and steel works showed considerably increased staffs. The mining and transportation divisions also afforded more employment and ac-

tivity in river driving caused large increases in personnel in logging camps. These driving operations were somewhat later than usual, having been delayed by the tardy spring. The only declines of importance were those of a seasonal character in the textile and leather industries.

Firms in all provinces registered substantial additions to staffs. The increases in Quebec, providing work for over 18,600 workers, were the most extensive. In Ontario, the gains were nearly as pronounced, while elsewhere they were on a somewhat smaller scale. Transportation, construction and manufacturing absorbed a large proportion of the additionally employed workers in Quebec, while logging camps reported much bigger payrolls. In Ontario the improvement in construction was especially marked, and sawmills registered greatly increased activity. Gold, silver, copper and nickel mines also showed much larger staffs. The commencement of seasonal operations on road beds caused well over 4,000 additional men to be engaged by the construction and maintenance departments of the railways in the prairie districts; there was also general improvement in a number of other industries. Railroad construction and maintenance, sawmills and logging camps reported the bulk of the expansion in British Columbia, while in the Maritime district improvement

was indicated in fish canneries, sawmills, coal mines, and in construction. Railway and water transportation in these Provinces showed the usual spring curtailment, reflecting the closing of the winter ports. Activity in all provinces was higher than during the corresponding period of last year and 1921. It is interesting to note that in British Columbia the index number stood slightly over the base; last year it was not until midsummer that a favourable situation was indicated in this comparison, while the highest point the number in that province reached during 1921 was 97 per cent.

The following table shows the index numbers of employment by provinces, together with the proportion that the employees reported in each province bears to the total number of employees reported.

District	Relative weight	May 31 1923	Apr. 30 1923	May 31 1922	May 31 1921
Maritime Provinces...	8.7	93.9	90.0	87.4	89.5
Quebec .....	27.3	99.1	90.3	88.1	83.4
Ontario .....	43.0	96.8	91.6	87.8	84.9
Prairie Provinces.....	12.7	95.5	90.4	92.8	91.1
British Columbia.....	8.3	100.4	97.5	96.6	93.3
Canada.....	100	97.3	91.4	89.2	86.6

Employment in all of the six cities for which separate tabulations are made

showed marked improvement. In Montreal, slightly over 7,000 persons were added to the staffs of the 735 firms reporting; they employed 110,272 workers as compared with 103,235 at the close of April. The greater part of this expansion of between 6 and 7 per cent occurred in the shipping and stevedoring divisions. Construction, manufacturing and trade were decidedly more active also. Statements were received from 819 firms in Toronto, whose staffs included 99,838 persons as compared with 97,874 in the preceding month. The difference represented an increase of about two per cent. Construction, transportation, retail trade, iron, steel and lumber recorded increased activity, while the textile industries were not so fully employed. Operations in sawmills, pulp and paper factories and in construction were increased to a substantial extent in Ottawa, increased employment for nearly 1,600 persons having been provided in these and other industries. The payrolls of the 133 concerns reporting aggregated 11,674 persons, or between 15 and 16 per cent more than at the end of April. The expansion in Hamilton was on a much smaller scale, there being slight additions to staffs in a number of industries. The largest gains occurred in construction. Returns were tabulated from 198 employers whose staffs comprised 28,792 persons as against 28,283 in the last report. There was, therefore, an increase of between one and two per cent.

In Winnipeg also small additions to staffs were registered in a number of industries, building contractors recording the largest. An aggregate working force of 24,856 persons was indicated by the 297 firms making returns who had employed 24,514 workers at the close of April. Activity in construction and in lumber and rolling mills accounted for the expansion in Vancouver, 692 persons having been added to the payrolls of the 226 firms reporting. They employed 20,756 persons or about 3 per cent more than in the preceding month. The index numbers of employment in these cities as at May 31 and April 30, 1923, and May 31, 1922, are given in the following table:

City	Relative weight	May 31 1923	Apr. 30 1923	May 31 1922
Montreal .....	13.8	95.4	88.8	85.9
Toronto .....	12.5	89.9	88.1	86.6
Ottawa .....	1.5	109.6	94.8	.....
Hamilton .....	3.6	94.6	92.6	.....
Winnipeg .....	3.1	87.1	86.3	92.9
Vancouver .....	2.6	94.7	91.8	97.5

#### The Manufacturing Industries.

Large increases in employment were reported in this division during May; the tendency during the same month of last year had been upward also, but the situation then was decidedly less favourable than for the period being surveyed. Statements were compiled from 3,872 manufacturers employing 462,422 persons as compared with 447,608 in April, an increase of over three per cent. Of this gain more than half was due to increased activity in sawmills, while seasonal expansion was also indicated in fish canneries. Fruit and vegetable canning, pulp, paper, iron, steel, tobacco, glass, electric current, nickel, aluminum, oil, gas, cyanamid and asbestos factories were also busier. On the other hand, curtailment of operations continued to be indicated in textiles, particularly

in garment, personal furnishing, thread, yarn and cloth mills, and in boot and shoe factories. Musical instrument works, moreover, were slacker. Reductions in personnel had been reported in these three industries during May, 1922. In spite of the fact that the improvement indicated in manufacturing as a whole, had been slightly more pronounced during the same period of last year, than for the month being surveyed, the index number then stood over 9 points lower than in this month.

**ANIMAL PRODUCTS — EDIBLE.** — Further large additions to staffs were reported in this industry. Fish canning, smoking and curing, dairying and meat-packing absorbed considerably larger working forces, the increases in the first named being particularly large. The improvement was reported to some extent in all provinces, although the gains in the Maritime district greatly exceeded those indicated elsewhere. Statements were received from 198 firms employing 14,694 persons as compared with 12,843 employees on April 30, the difference representing an increase of over 14 per cent. The seasonal expansion recorded during the same month of last year had affected a slightly smaller number of persons, but the level of employment for the two periods was very much the same.

**LEATHER PRODUCTS.** — Contractions were again recorded in boot and shoe factories, there being a decline of two per cent in the employment afforded in the leather group as a whole. The tendency in all provinces except the Maritimes was downward, the losses in Quebec, however, exceeded those registered elsewhere. The payrolls of the 204 firms making returns, aggregating 17,092 persons, were smaller by 357 workers than in April. Curtailment of operations involving the release of a slightly larger number of persons had been recorded during May, 1922, when employment was in a slightly less volume than in May of the present year.

**LUMBER AND ITS PRODUCTS.** — The additions to staff reported in sawmills during May were the largest on record, being slightly in excess of those registered during the corresponding month of last year when the index number stood some 5 points lower. Reports were received from 718 concerns in the lumber group, whose payrolls aggregated 55,800 persons, as compared with a total working force of 47,619 in April. All provinces contributed to this increase of over 17 per cent, the gains in Ontario, however were considerably more extensive than in the other districts. The expansion was confined chiefly to lumber mills; activity in furniture and vehicle works declined.

**MUSICAL INSTRUMENTS.** — The trend of employment in this industry continued to be downward, reductions in employment having been registered during the greater part of the year. Contractions had also been indicated during the spring and summer of 1922, and the index number in May of a year ago stood on a lower level than for the period under review. According to reports tabulated from 40 manufacturers, 3,051 persons were employed in the making of musical instruments as compared with 3,180 in the preceding month. This decline of four per cent occurred almost entirely in Ontario.

**PLANT PRODUCTS, EDIBLE.** — Further expansion was indicated in the edible plant products industries during May, when 343 persons were added to the staffs of the 288 firms reporting. Their staffs comprised 24,680 persons as compared with 24,337 at the close of April. This increase of rather better than one per cent was slightly smaller than that registered during the same month of last year, but the situation then was not so favourable as for the period being surveyed. Fruit and vegetable canneries and biscuit factories reported the bulk of the increase, while sugar refineries were slacker than in April. Firms in Ontario reported quite large additions to

staffs; in British Columbia there was a minor increase, while elsewhere declines were recorded.

**PULP AND PAPER.** — Continued activity was indicated in pulp and paper mills, while manufacturers of paper products and printing and publishing shops were somewhat less fully engaged. Returns were compiled from 448 firms, whose staffs, aggregating 53,512 persons, were larger by 1,776 workers or 3.4 per cent than in the last report. About 70 per cent of the expansion occurred in Quebec, while improvement was also registered in Ontario and British Columbia. The tendency in the other provinces was downward. Additions of staffs on a somewhat smaller scale had been recorded during May, 1922, when the index number stood several points lower than at the present time. Employment during the month being reviewed was better than at any period since the autumn of 1920.

**TEXTILE PRODUCTS.** — The employment afforded in thread, yarn, cloth, garment, personal furnishing, knitting and headwear factories declined still further during May. This movement repeats that experienced during the corresponding month of last year, although the shrinkage then was not so extensive as during the period being surveyed. The index number for this month, however, was still somewhat higher than at that time. Reports were received from 582 concerns employing 72,497 persons as compared with a payroll of 73,906 workers in April. All provinces shared in this decline of .9 per cent, the losses in Ontario, however, were the largest.

**TOBACCO, DISTILLED AND MALT LIQUORS.** — The production of tobacco in Quebec and of distilled liquors in Ontario employed larger working forces than in April, there being an increase of 466 persons in the number of employees reported in the group as a whole. The payroll of the 96 concerns making re-

turns aggregated 11,042 persons as compared with 10,576 in the month before, the difference representing an increase of over four per cent, which caused the index number to be slightly higher than in May of last year when the tendency had also been favourable.

**CLAY, GLASS AND STONE PRODUCTS.**—Employment in this industry continued to increase, mainly in glass factories in Ontario, although general improvement was reported in glass, brick and cement works in other provinces. Statements were tabulated from 118 employers, whose staffs aggregated 10,178 persons or 576 more than in April. There was, therefore, an increase of 6 per cent. An upward movement had been indicated in May, 1922, but the index number then stood several degrees lower than in this May.

**ELECTRIC CURRENT.**—Continued expansion was recorded by plants producing electric current, chiefly in Ontario and Quebec, but to some extent in all provinces. Additions to staffs on a somewhat smaller scale had been indicated during the same month of last year, but conditions then were not quite so good. An aggregate working force of 10,871 persons was reported by the 80 concerns making returns, who had employed 10,345 workers in April. The greater part of this increase of five per cent occurred in Ontario and Quebec.

**IRON AND STEEL PRODUCTS.**—Further activity was shown in the majority of divisions of this industry, notably in rolling and forging mills, machinery, agricultural implement, railway car, automobile, iron and steel fabrication works and in foundries and machine shops. The tendency in all provinces except British Columbia was favourable, the improvement in Quebec being most pronounced. The payrolls of the 641 firms reporting increased from 131,472 on April 30 to 133,619 at the close of May, an increase of 1.6 per cent. During the corresponding month of last year very large additions to staffs had

been indicated, representing recovery from the temporary shutdowns recorded at the close of April, and the index number stood some 16 points lower than for the month being surveyed.

**NON-FERROUS METAL PRODUCTS.**—Aluminum factories, nickel and copper, smelters and refineries were considerably busier than in April, as were also works producing lead, tin, zinc and copper articles. The improvement was general except in the prairie provinces, where conditions were stationary. Returns were compiled from 108 employers, having 12,513 persons on their payrolls as compared with 11,970 in the last report. The difference represented an increase of 4.5 per cent. The trend of employment in May, 1922, had also been progressive but employment then was in much smaller volume than this year.

**MINERAL PRODUCTS.**—The production of asbestos goods, petroleum products and cyanamide in Quebec and Ontario showed an increase during May. According to statements tabulated from 74 firms employing 9,640 persons, they had enlarged their payrolls by 361 persons or 3.9 per cent during the month. The index number stood higher than at any period since 1920, exceeding that for May of last year, when the tendency had also been favourable, by over 7 points.

#### Logging.

Activity in river driving caused considerable increases in employment to be registered in logging camps during May, those operations, as mentioned before, having been somewhat delayed by the late spring. Substantial increases were reported in Quebec; gains on a somewhat smaller scale occurred in British Columbia, and there were slight increases in the Maritime and Prairie provinces, while in Ontario moderate declines were indicated. The expansion for river drives had occurred earlier in the spring of 1922 and during May the situation had remained unchanged.

Employment then, however, was not so brisk as for the month being reviewed. A combined working force of 19,540 persons was reported by the 203 firms making returns, who had employed 17,986 workers in April. There was, therefore, an increase of 8.6 per cent.

#### Mining.

COAL MINING. — Greater activity was recorded in the Nova Scotia and Alberta coal fields, while in British Columbia reductions were indicated. Ninety-one operators made reports showing that they employed 29,277 persons, or 612 more than in April, an increase of two per cent. Very little change in personnel on the whole had been indicated during May, 1922, and the index number then stood about three points lower than at the present time.

METALLIC ORES — During May the largest increases to staff since the record began in 1919 were reported in the mining of metallic ores, chiefly in Ontario, but to some extent in British Columbia. Gold, copper, silver, zinc, lead and nickel mines afforded greatly increased employment, causing the index number to be higher than in any period in 1922 or 1921. Additions to staff on a much smaller scale had been indicated during May of last year. According to reports furnished by 45 concerns, their payrolls, aggregating 11,397 persons, were larger by 1,218 workers or 12 per cent than at the close of April.

NON-METALLIC MINERALS OTHER THAN COAL. — Asbestos mines in Quebec, stone and gypsum quarries in New Brunswick afforded more employment than in the preceding month, while minor increases were recorded in other provinces. The 66 firms making returns had increased their working forces from 5,681 persons in April to 6,271 in May, an expansion of over 10 per cent. Although gains on a somewhat larger scale had been reported during the same month of last

year, the index number then was nearly 13 points lower than in this May.

#### Communication

Concerns in this division continued to increase their payrolls, having added 453 persons to their staffs during May. The concerns reporting, 169 in number, employed 21,049 workers or 2.2 per cent more than in April. Telephone companies in Ontario showed nearly half the increase, while the gains on telegraphs occurred chiefly in that province and Quebec. The improvement recorded was much more extensive than that indicated in May of last year, and the situation compared favourably.

#### Transportation.

STREET RAILWAYS AND CARTAGE. — Continued expansion was registered in this industry during May, although the increases were very much less extensive than during the same month of last year, when the index number had stood over 12 points higher. Street railways in Quebec, Ontario and the Prairie Provinces reported the bulk of the increase, while elsewhere the changes were slight. Returns were received from 103 employers whose payrolls totalled 19,480 persons. As they had employed 18,825 workers in April this was an increase of 3.5 per cent.

STEAM RAILWAYS. — Further marked increases in personnel were recorded in this industry during May, the expansion in Quebec being especially large. In Ontario and British Columbia additions to staffs on a somewhat smaller scale were reported, while losses were registered in the Maritime and Prairie provinces, those in the former district being of a seasonal character. A combined payroll of 76,174 persons was indicated by the 121 concerns and divisional superintendents' reporting, who had employed 74,091 workers in April. There was, therefore, an increase of 2.8 per cent. Additions to staffs of approximately the same size had been re-

Industry	Relative weight	May 31 1923	April 30 1923	May 31 1922	May 31 1921

gistered during the corresponding month of 1922, but employment then was in smaller volume than for the month being surveyed.

**SHIPPING AND STEVEDORING.** — Very large increases in employment were indicated in this division, 4,750 persons having been added to the staffs of the 62 firms reporting. As their payrolls included 14,821 persons as compared with 10,071 in April, this represented a gain of 47 per cent. Substantial declines, due to seasonal causes, were recorded in the Maritime district and contractions on a much smaller scale occurred in British Columbia. On the other hand, activity in Quebec was greatly heightened and in Ontario there were moderate increases. The tendency during May of a year ago had been abruptly upward also, although the increases were somewhat less extensive. Nevertheless the index number then stood a few points higher than in this May.

#### Construction and Maintenance.

**BUILDING CONSTRUCTION.** — Extensive gains were reported by building contractors during the month under review, chiefly in Ontario and Quebec, although there was also expansion in the other districts. Statements were compiled from 302 firms employing 19,431 persons as compared with 15,834 in April, the difference representing an increase of 22.7 per cent. Employment during May of last year had increased to a marked extent, although the gains were scarcely as large as for the period being surveyed. The index number then however was slightly higher than for the same month of 1923.

**HIGHWAY CONSTRUCTION.** — Activity on public highways in Ontario, Quebec and the Maritime Provinces caused pronounced additions to staffs in this industry during May, when 3,748 persons were added to the staffs of the 44 concerns reporting. This was an increase of over 150 per cent, their payrolls having comprised 2,474 men in April. The gain

was slightly larger than that reported during May, 1922, and employment was in greater volume than at that time.

**RAILWAY CONSTRUCTION AND MAINTENANCE.** — Further extensive expansion was recorded by the construction and maintenance departments of the railways, especially in the Prairie Provinces, Ontario and Quebec, while lesser gains were indicated in the Maritime Provinces and British Columbia. Thirty-two concerns and divisional superintendents registered a combined working force of 46,187 persons as compared with 34,724 on April 30. This increase of 11,463 persons, or 33 per cent, was larger than any indicated during 1922 or 1921, providing work for nearly 3,000 more men than that recorded in May of last year, when the index number had been some 17 points lower.

#### Hotels and Restaurants.

Another seasonal increase was noted in the employment afforded by hotels, the greatest improvement occurring in summer resorts in Alberta. Reports were compiled from 76 hotels and restaurants, employing 7,575 persons, as compared with 6,921 in April. The difference represented an increase of over 9 per cent. An upward trend, also of

a seasonal character, had been indicated during May, 1922, but the level of employment then was below that for the month being surveyed.

#### Trade.

Further improvement was indicated by both wholesalers and retailers during May, when they added 326 persons to their sales force. This increase was fairly general in character, although employment in retail stores in the Prairie Provinces and in wholesale establishments in the Maritime district declined to some extent. The staffs of the 573 firms reporting aggregated 54,680 persons or .6 per cent more than in April. A nominal reduction in personnel in the trade group as a whole had been indicated during May of last year and the index number now stood slightly higher than at that time.

The table on page 781 shows the index numbers of employment in the various industries as at April 30 and May 31, 1923, and May 31, 1922 and 1921. The first column gives the proportion of employees in each industrial group in relation to the total number of workers in all groups for the month under review. (Number of workers employed on January 17, 1920, equals 100).

---

### EMPLOYMENT OFFICE REPORTS FOR MAY 1923.

**R**EPORTS from the offices of the Employment Service of Canada for the month of May 1923, show an increase in the number of placements effected, while vacancies and applications declined slightly, as compared with the previous month. A comparison with May 1922, shows a marked improvement in employment during the period now under review. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month, periods, indicates that the curve of placements rose steadily during

the month, the curve of applications, though declining somewhat, maintained approximately the same level, while the curve of vacancies declined abruptly. The contraction in vacancies was due to falling off in orders for farm workers in the Prairie provinces after the peak of the spring demand had been reached. Placements of workers continued in large numbers, however, in these provinces, due to the many orders remaining unfilled at the end of April, and to this fact may be attributed the rise in this curve during the month. The sum-

mary of the reports from the offices indicates that the average number of applications registered daily at the offices was 1887, during the first half of the month, as compared with 1,894 during the previous period and with 1,772 during the same period a year ago. During the latter half of the month application averaged 1,895 daily as compared with 1,758 during the latter half of May 1922. Vacancies notified by employers averaged 1,844 and 1,794 daily during the first and second half of the month as compared with 1,619 and 1,587 during the same periods a year ago. The average number of vacancies reported daily during the latter half of April 1923 was 1,903. Placements effected daily by the offices during the first half of May averaged 1,541, as compared with an average of 1,464 during the preceding period and 1,369 during the same period last year. During the latter half of May placements averaged 1,574 daily, as compared with 1,326 daily during the same period a week ago. The average number of placements in regular employment during the period was 1,137 and 1,184 daily during the first and second half respectively while place-

ments in casual work during the corresponding period were on an average of 404 and 390 daily.

The following table gives placements effected to date by the offices of the Employment service:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	87,904	305,905
1920.....	366,547	79,265	445,811
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923 (5 months).....	96,778	61,723	158,501

During the month of May the offices made 42,006 references to positions and effected a total of 40,493 placements. The placements in regular employment totalled 30,174, of which 27,012 were of men and 3,162 of women, while the number of placements in casual work was 10,319. Employers notified the Service of 47,297 vacancies, of which 35,948 were for men and 11,349 for women. Applications for work numbered 49,-

167, of which 38,166 were from men and 11,001 from women.

Placements in regular employment by provinces were as follows: Nova Scotia 588 men, 86 women; New Brunswick 698 men, 64 women; Quebec 1,736 men, 489 women; Ontario 11,469 men, 1,097 women; Manitoba 2,680 men, 506 women; Saskatchewan 3,404 men 336 women; Alberta 3,331 men, 314 women; British Columbia 3,106 men, 270 women.

### MARITIME PROVINCES

The demand for farm labour continued fairly active, placements being effected from all the offices. Building and construction groups showed marked improvement, calls for carpenters, painters, plasterers and building and and road labourers, being received at Moncton, St. John and Chatham, and placements were effected without difficulty. Logging operations declined somewhat, a few vacancies being reported at St. John and Amherst. Household workers were required in considerable numbers, but the supply of trained women was not sufficient to meet the demand.

### QUEBEC.

Road construction, railway maintenance and extension work, created a large demand at all the offices, while the demand for tradesmen in the building industry was greatly in excess of the supply. Continued calls were received for bushmen and river drivers, and placements were made from Montreal, Hull and Quebec. The mining and quarrying industries were reported as busy. Vacancies were available at Montreal, Quebec and Three Rivers, for skilled workers in the iron and steel industry and in textile trades.

### ONTARIO.

Agricultural work continued to form a large part of the business of the offices, the demand for helpers being general throughout the province with a

shortage of experienced workers. With the commencement of building and road construction programmes, opportunities for employment were increased considerably, and calls for carpenters, painters, plasterers, bricklayers and masons, were received in large numbers at all the offices, especially at Windsor, Toronto, London and Kingston. Carpenters for elevator work were required at Port Arthur and Fort William. Highway and road construction was under way at Toronto, Belleville, Hamilton, Kitchener and Oshawa, and, while the demand for workers was not great as yet, prospects were bright for improved employment in this group. Railway maintenance, including steel track laying, sectional repairs, grading and extension work, absorbed numbers of labourers from Fort William, Port Arthur, Ottawa, St. Thomas, Toronto and Timmins. In the logging group, work was available for all experienced river men at Cobalt, Fort William, North Bay and Pembroke. Very few calls for other bush workers were reported. Sawmills and pulp mills were busy, and numbers of skilled factory labourers and woodworking machine hands were required. The mining group was active. A shortage of miners was reported from Cobalt, and muckers, miners and surface labourers were required at Sudbury. Improved demand was shown in the manufacturing industries. Skilled mechanics for the auto industry were required at Chatham and Oshawa. Riveters, machinists and factory labourers for the metal trades were in demand at Hamilton, Kingston and Kitchener, while vacancies for boys and girls as apprentices in the textile industry were offered at Kingston. The opening of navigation created a demand for marine workers and deck hands, while longshore work increased considerably at Fort William, Kingston, Port Arthur and Toronto. Experienced household help were hard to secure, while an increased number of vacancies for workers in hotels and institutions were filled without difficulty.

## MANITOBA.

An insistent demand for farm help was general throughout the province, and the offices experienced difficulty in securing sufficient workers. Considerable activity was apparent in the construction groups, with increasing number of calls for building labourers, carpenters, painters and road workers. Building tradesmen and railway section workers were transferred from Winnipeg to points in Ontario, while railway maintenance work afforded employment to a considerable number at Brandon and Winnipeg. Logging operations in the province had ceased, although river driving was still fairly active. A number of bushmen were sent to camps in Ontario for the spring cut. From Winnipeg also a number of miners and muckers were sent to a metal mine near Coppercliffe, Ont.

## SASKATCHEWAN.

Requests for farm help were not so numerous as during last month but, with the large number of previous orders, placements in this group were very good. Experienced farm workers were transferred from British Columbia and Manitoba to points in Southern Saskatchewan. In the building and construction groups little demand was reported. Several carpenters and building labourers were required at Estevan and Saskatoon, and bridge carpenters were placed near Moose Jaw, while a few bricklayers and masons were reported as out of work. Calls were received at Estevan, North Battleford, Moose Jaw, Regina and Saskatoon, for teamsters, section workers and steel gangs for railway maintenance work. With the approach of summer an increase was reported in the number of requests for housekeepers, maids and waitresses, with an inadequate supply of experienced applicants.

## ALBERTA.

An active, though slightly lessened, demand for farm workers characteriz-

ed the employment situation in this province. Experienced men for seeding were placed in large numbers at all the offices, together with a few workers from British Columbia. A few shepherds and shearers were placed from Calgary. Operations in the construction groups were well under way with road work, park improvement, telephone and water works repairs, forming the predominant note in the demand for workers. Carpenters and bricklayers for urban and rural building were placed from Calgary, Drumheller and Medicine Hat. Vacancies for men, labourers and teamsters, were received in large numbers, and several were transferred from Calgary to Saskatoon.

## BRITISH COLUMBIA.

Few calls for general farm labour were received, but the supply of fruit pickers, both men and women, was not sufficient to meet the increased demand. Prospects were good for improved employment in the building group. A few vacancies for carpenters and labourers were available at Prince Rupert, Cranbrook and Vancouver, while sectionmen and bush gangs were placed in large numbers from Kamloops, Prince George, Prince Rupert and Vancouver. In the logging industry, swampers, axemen and teamsters were required at Revelstoke and Prince Rupert, while sawmill labourers, both skilled and unskilled, were placed at Vancouver, Kamloops, Prince George and New Westminster. Little change was reported in the mining group, a few orders being filled from Vancouver and Victoria. Longshore work gave temporary employment to a number of men at Victoria, while a few painters were employed repainting the boats in the drydock. The offices were unable to meet the normal demand for experienced household workers, the supply of trained women being inadequate. Casual workers and charwomen were placed in the usual numbers.

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF MAY 1923

OFFICES	VACANCIES		APPLICANTS					Regular placements same period 1922

\*112 placements effected by offices since closed.

## MOVEMENT OF LABOUR.

The offices of the Employment Service of Canada made 30,174 placements in regular employment, of which 16,638 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter, 2,401 were granted the Employment Service reduced transportation rate, 1,674 going to points within the same province as the despatching office and 727 to other provinces.

Quebec offices issued 284 certificates, of which 103, chiefly mill hands, river drivers and bush men, were going to points within the province, and 181 bush men, labourers and bricklayers, to points in Ontario. The offices in Ontario granted 956 certificates, 25 of which were issued to labourers going to points near Hull, Que., and one to a plumber travelling from Sault Ste. Marie to Moncton, N.B. The majority of provincial transfers were of bushmen, saw-mill and pulp mill men, river drivers and railway construction labourers, going to points near Ottawa, Sudbury, Timmins, Fort William and North Bay. A few were of farm hands, while 8 fire rangers were sent to Sault Ste. Marie, one blacksmith and one hoist runner to Cobalt, and one stone cutter was transferred from Toronto to Kingston. Persons in Manitoba benefiting by the employment service reduced rate numbered 717, of whom 308 were going to employment within the province, 343 to points in Ontario, 65 to Saskatchewan, and one to British Columbia. More than 85 per cent of the transfers within the province were of farm workers, the remainder including machinists, mill hands and river drivers, and labourers. The transfers to Saskatchewan were of farm hands, teamsters, cooks and housemaids, while one housekeeper was sent to Cranbrook, B.C. From Winnipeg 256 workers chiefly teamsters, mill labourers, carpenters, cooks and construction la-

bourers were sent to points near Timmins and Port Arthur, while five machinists, one foreman and one cook were transferred to Guelph, Ont., and 74 muckers and mine labourers and 3 drillers were sent to employment near Sudbury, Ont. The office at Regina, Sask., despatched one farm worker to Medicine Hat, Alta. The 112 transfers within the province, included farm hands, railroad workers and graders, blacksmiths, carpenters, teamsters, waitresses and housemaids, sent to various points, in addition to 18 river drivers and saw-mill men placed within the Port Arthur zone. Alberta offices issued reduced rate certificates to 7 teamsters' 4 railway construction labourers and 14 farm hands going to Saskatoon and to two farm workers going to North Battleford, Sask. Of the 137 provincial transfers, 21 were from Calgary, 116 from Edmonton and were mainly farm workers, bushmen, carpenters and houseworkers, with a few miners and two fire rangers. The offices in British Columbia granted 84 certificates to persons going to employment within the province, 32 to farm workers and to domestics going to Saskatchewan and 51 to farmers going to stations in Alberta. From Vancouver, Prince Rupert, Prince George and Nelson, a number of bushmen, millmen and swampers, were transferred to various camps, while two machinists were sent from Nelson to Revelstoke, one fire patrol from Prince George, five engineers from Vancouver to Prince George and other points, one fruit picker to Vernon, six miners from Vancouver to Revelstoke and one linotype operator from Victoria to Nelson.

Of the 2,401 persons benefiting by the Employment Service reduced rate, 1,232 were carried by the Canadian National-Grand Trunk Railways, 1,003 by the Canadian Pacific Railway, 165 by the Temiskaming and Northern Ontario Railway and one by the Pacific Great Eastern Railway.

## BUILDING PERMITS ISSUED DURING MAY, 1923.

THE value of the building permits issued in 56 cities during May was practically the same as in April, there being an increase of .3 per cent only, while as compared with the figures for the corresponding month of last year there was a slight decline of .8 per cent. According to statements tabulated by the Dominion Bureau of Statistics, building to the value of \$17,593,615 was authorized in comparison with totals of \$17,544,061 and \$17,743,216 in April, 1923 and May, 1922, respectively.

Forty-seven cities furnished detailed reports, showing that they had issued approximately 2,500 permits for dwellings, valued at over \$9,500,000; the number of dwellings to be built would

be somewhat larger, since the construction of several houses or apartments is very frequently authorized by one permit. Some 4,700 permits were issued for garages, stores, factories, etc., etc., at an approximate valuation of \$5,800,000. In addition, authority was given for the erection of three grain elevators at Port Arthur and for several smaller engineering works in other cities, together estimated to cost nearly \$1,000,000.

All provinces except Quebec and British Columbia reported greater anticipated activity in building; in the former there was a considerable decline from the high level recorded during April, while in the latter the reduction was comparatively slight. The

most pronounced increase was that in Ontario of \$2,383,688, or 31 per cent.

In comparison with the returns for May of last year Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia recorded decreases in the value of the permits issued, that of \$765,586 or 59.7 per cent in Saskatchewan being the largest. In Quebec and Ontario there were increases of \$714,580, or 18 per cent, and of \$1,497,865 or 17.5 per cent, respectively.

The value of the building permits issued in Montreal, (\$3,524,825) was very much smaller than in April, when the total, (\$6,616,757) had been exceptionally high, but it was a good deal

larger than in May, 1922. In Toronto and Winnipeg the amount of building authorized was greater than in the preceding month but rather less than in the same month of last year, while in Vancouver there were rather slight increases in both cases. The value of the building contemplated in Shawinigan Falls, Westmount, Hamilton, London, Niagara Falls, Owen Sound, Port Arthur, Windsor and Nanaimo was exceeded by the totals for both April, 1923 and May, 1922.

The table on page 788 shows the value of the building permits issued in May as compared with April, 1923 and May, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

---

### FAIR WAGE CONTRACTS, JUNE 1923.

**D**URING June, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to three fair wage contracts which were awarded by the Department of Public Works. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to the supplies ordered by the Post Office Department, subject to the regulation for the suppression of the Sweating

System and the securing of fair wages, etc.

#### DEPARTMENT OF PUBLIC WORKS

Dredging the basin at Rivière du Loup, Quebec, Que. Name of contractor Lachance, Limitée, Quebec, Que. Date of contract, June 20, 1923. Amount of contract, Class "A", \$2.50 per cubic yard, scow measure; Class "B", 34 cents per cubic yard, scow measure.

Renewal of 182 feet of revetment wall, McGregor's Creek, Chatham, Ont. Name of contractor, William Bermingham, Kingston, Ont. Date of contract, June 23, 1923. Amount of contract, unit prices.

Superstructure of timber pilework wharf, Blind River, Ont. Name of con-

tractor, Thomas P. Charleson, Ottawa, Ont. Date of contract, June 23, 1923. Amount of contract, unit prices.

#### POST OFFICE DEPARTMENT

The following is a statement of payments made in June for supplies ordered by the Post Office Department subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals	710.44
Making and repairing rubber stamps, daters etc.....	157.34
Making-up and supplying letter carrier's uniforms, etc.....	19,211.25
Repairing scales.....	125.60
Repairing boxes and hampers, etc.....	92.00
Supplying ink.....	190.00
New mail boxes.....	448.20

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES.

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Construction.

OTTAWA. — THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, AND STONEMASONS' UNION, No. 14. Agreement to be in effect from May 1, 1923, until April 30, 1924, four months' notice of change to be given.

Hours per day, eight for five days, and four on Saturdays.

Overtime until 10 p.m. time and one-half; Saturday afternoons, holidays, and from 10 p.m. until 8 a.m., double time. In case of two or more shifts, regular rate to be paid. Minimum wage per hour, \$1.00.

Both parties agree to an industrial council of five from each party, with an independent chairman, to adjust disputes, decision to be binding.

No work on Labour Day except for saving of life or property.

Union representatives to be allowed access to all jobs to confer with the shop steward.

Members discharged to have one hour in which to be paid, and thereafter to be paid waiting time if they wait on the job.

Both parties to adopt and enforce the national apprentice system, as adopted at the Joint Conference of the Building and Construction Industries held in Ottawa, on May 3, 1921. (A report of this conference was issued by the Department in Bulletin No. 3, Industrial Relations Series).

Members of No. 14 to be allowed to lay brick and terra-cotta where mortar is used.

OTTAWA. — MASONS' AND GENERAL CONTRACTORS' SECTION OF THE BUILDERS' EXCHANGE, AND BRICKLAYERS' UNION, No. 7. Agreement to be in effect from May 1, 1923, until April 30, 1924, unless extended by mutual agreement.

Wages per hour, \$1.00. Hours per day, for five days, eight; Saturday, four. Overtime until 10 p.m., time and one-half; thereafter and Saturday afternoons, Sundays and holidays, double time.

Only good standing members or those competent and about to become members to be employed.

Employees sent out of the city to receive travelling expenses and board.

Union agent and shop steward to be allowed to carry out their duties in connection with the union.

Any member discharged to be paid at once or to be paid waiting time.

No employee to quit work or take part in a sympathetic strike except when ordered by executive board of union.

Any firm established two or more years and employing two or more bricklayers during the whole of the second season may have an apprentice; and if established four years and employing five bricklayers, two apprentices. Apprentices to serve four years under indenture.

Foremen to receive not less than ten cents per hour above scale.

Any violation of the agreement to be reported to and to be dealt with by the joint arbitration committee.

PETERBORO, ONT. — LOCAL CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA. Agreement to be in effect from May 1, 1923, until April 30, 1924, and thereafter from year to year unless three months' notice of change is given.

Hours per day, eight for first five days; four on Saturdays. No member in the employ of any recognized contractor to be allowed to work after hours for any other contractor or for any private party.

Minimum wage: per hour, 75 cents. Foreman, 85 cents. Any man incapacitated by old age, accident or other cause may work for such rate as is mutually arranged between himself and employer, and approved by the union. Overtime until midnight, time and one-half; thereafter and Saturday afternoon, Sundays and holidays, double time. No work on Labour Day except to save life or property. When work is in shifts, nine hours' pay for eight hours' work in second and third shifts. A man working on more than one shift in twenty-four hours to be paid overtime.

One hour's notice to be given before laying off or quitting the job.

Business agent to have free access to the job.

No employee to work for contractor not complying with the agreement, and no contractor to employ a carpenter who has been expelled or fined by the union for violation of the agreement.

TORONTO, ONT. — TORONTO LOCAL OF DISTRICT No. 4 INTERNATIONAL CUT STONE CONTRACTORS' AND QUARRYMEN'S ASSOCIATION, AND THE TORONTO STONE CUTTERS' ASSOCIATION. Agreement to be in effect from May 1, 1923, until April 30, 1924, with one month's notice of change.

Only union members to be employed as stonecutters, provided union can furnish men. Outside men if employed must make application and be permitted to join the union.

Wages per hour, \$1.00. Hours per day, eight for five days and four on Saturdays. Overtime, only in case of necessity, with time and one-half for first two hours and double time thereafter.

Certain holidays to be observed and others to be optional.

Differences and grievances to be submitted to an arbitration committee of three from each party, and if necessary an umpire selected by them.

One apprentice may be employed for five or less journeymen and one additional for each additional five; not more than three to a shop. Apprentices to serve four years at rates mutually agreed upon.

No person to have right to interfere with workmen during working hours.

Workmen may work for and employers may employ or discharge whomsoever they see fit.

Board and railway fare to be allowed a man sent out of town.

TORONTO, ONT. — CERTAIN FIRMS AND PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, No. 151. Agreement to be effective from April 1, 1923, until March 31, 1924.

Hours of labour, eight per day and four on Saturdays.

Overtime, first four hours, time and one-half; thereafter, Saturday afternoons, Sundays and holidays, double time. No work on Labour Day.

Wages per hour, 75 cents.

Transportation time beyond the city limits to be paid for. Workmen sent to outside jobs to have railway fare and travelling expenses paid and regular pay if travelling between 8 a.m. and 8 p.m. If travelling at night a berth to be provided. Board and lodging to be paid while out of town. When working out of town where no union exists, men may work after regular hours at straight time.

HAMILTON, ONT. — HAMILTON SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS,

No. 67. Agreement to be in effect from May 1, 1923, until April 30, 1924, and from year to year unless three months' notice of change is given.

Hours per day, eight for five days and four on Saturdays.

Minimum wage per hour, 85 cents.

Any apprentice having served four years, and having passed the examination, to receive 70 per cent of journeymen's wages for first year and 80 per cent for second year; and thereafter, minimum wage for journeymen.

Overtime, until midnight, time and one-half; thereafter and Sundays and holidays, double time.

Men sent out of town to have fare and board and travelling allowance.

Only union members to be employed; members to work only for established sanitary and heating engineers.

Each journeyman to be allowed one helper only.

Disputes and grievances to be referred to a joint conference board of three employers and three journeymen, or if not thus adjusted, to the general office of the union. No strike or lockout to take place until an officer of the association has investigated and rendered a decision.

If in case of a dispute in the enforcing of any clauses of the agreement the employer construes it a violation of the law, he will be relieved of the responsibility for the enforcement of same.

ST. CATHARINES, ONT. — CERTAIN LOCAL CONTRACTORS AND CARPENTERS AND JOINERS OF AMERICA, Nos. 38 AND 2632. Agreement to be in effect from May 1, 1923, until April 30, 1924, with three months' notice of alteration.

Hours of labour, eight for five days and four on Saturdays. Minimum wage, per hour, 85 cents. Overtime and holidays, double time.

Master carpenters may work on their contracts.

Only union men to be hired, if available. If non-union men are employed, they may have twelve days to join the union.

Car fare outside city to be allowed when exceeding five cents.

Apprentice to be employed only where there are journeymen; one apprentice to every five journeymen; apprentices to have overtime pay when working overtime.

Foremen to be paid five cents per hour over union rate.

Business agent may visit the job but not delay or interfere with the work.

Men in shops may, if necessary, work one hour per day overtime on machines at straight time rate.

No member to work after regular working hours for any person while employed by a recognized contractor.

Men on high scaffolds to be paid extra.

Grievances to be submitted to a committee of two members of each party.

NIAGARA FALLS, ONT. — THE BUILDERS' EXCHANGE, GENERAL CONTRACTORS' AND CARPENTERS' SECTIONS, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, NOS. 713 AND 2634. Agreement in effect from January 1, 1923, until December 31, 1923, and thereafter from year to year unless notice of cancellation be given on or before October 1.

Grievances to be submitted to a committee of three members of each party.

Hours per day, eight for five days and four on Saturdays.

No smoking to be permitted on the job where there is combustible matter.

Saturday afternoons, Sundays and holidays, double time; emergency work during two hours after quitting time, time and one-half.

When work is carried on in shifts, second and third shifts to be paid eight hours for seven hours' work. Men working more than one shift in twenty-four hours to receive overtime pay.

Minimum wage, per hour, 80 cents. Foreman, 5 cents extra per hour. One hour's notice to be given of quitting or discharge.

Employers to hire only union men when available; non-union men to have fourteen days' notice to become members of the union.

Business agent may visit the job at any time but not to delay or interrupt the work.

Both parties agree that there is urgent necessity for an apprenticeship system.

GUELPH, ONT.—CARPENTER CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 2611. Agreement to be in effect from May 1, 1923, until April 30, 1924, with ninety days' notice of change.

Only union members to be employed, and such not to be employed where labourers or other trades are permitted to do a carpenter's work.

Hours per day, eight for five days and four on Saturday. Overtime to 10 p.m. and 7 a.m. to 8 a.m. time and one-half. From 10 p.m. to 7 a.m. and Sundays and holidays, double time. When work is in shifts, second and third shifts to be paid eight hours' time for seven hours' work. The same man not to work on more than one shift in twenty-four hours.

Minimum wage per hour, 80 cents. Foreman to receive not less than 10 cents above the highest rate paid to

journeymen on the job. Foremen must be union members.

One apprentice to four journeymen. Minimum wage per hour: first year, 32½ cents; second year, 42½ cents; third year, 52½ cents; fourth year, 62½ cents. If there is not sufficient work employer is to try to find work with another employer. Apprentice to join union not later than the second year. Apprentices over age of twenty-two must show proof of having previously worked at the trade.

Certain street car fares to be paid for by the contractor. Travelling time to be paid for. One hour's notice to be given of laying off or quitting the job.

Union representatives to have access to jobs, subject to approval of the management.

WINDSOR, ONT. — EMPLOYER PLASTERERS' ASSOCIATION AND PLASTERERS' LOCAL 345. Agreement to be in effect from May 1, 1923, to May 1, 1924.

Wages, per hour, \$1.50. Hours per day, eight for five days and four on Saturdays. No work Saturday afternoons. Overtime and holidays double time. No work on Labour Day.

Men hired to go out of town to have board and expenses paid.

Member discharged to be allowed fifteen minutes to clean his tools.

No person to help a journeyman except an apprentice or the employer.

Foremen to be union members, to have power to hire and discharge, and to receive \$1.00 per day above regular rate.

A firm in business for one year, with an average of five journeymen, may have one apprentice.

On jobs in the district (when union men are unemployed) done by outside contractors, fifty per cent of the men employed must be members of this local.

#### Transportation. — Street and Electric Railways.

TORONTO, ONT. — TORONTO TRANSPORTATION COMMISSION AND DIVISION No. 113. — AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA. Agreement effective from March 31, 1922, for one year, and later extended until March 31, 1924.

Wages per hour, Trainmen, motor-men and conductors—first three months, 55 cents; next nine months, 57½ cents; after one year, 60 cents; one-man car operators, 5 cents extra. When training students, 25 cents extra per day. Motor and truck repairmen: same wages as trainmen. Shedmen: foremen, 60 cents; others, 54-56 cents. Compressor room men, 60-61 cents; fender room men, 58 cents. Hours for the above classes, and eight hour day, straight time, to the fullest extent practicable, with a leeway of one-half hour to complete schedule, for 66 2/3 per cent of the crews. The remainder to work ends and spares.

Overtime not to be paid except in case of regular scheduled crews who are scheduled to do over eight and one-half hours' work; and then only when this has been completed. Overtime when paid as above, time and one-half. Overtime not be paid extra if due to failure of the power supply or breakdown of equipment. Sunday work, time and one-quarter. Extra trainmen, allowance of one-half hour for extra runs under two and one-half hours. Extra runs between two and one-half and three hours to be paid three hours. No allowance for over eight and one-half hours work and no more than two allowances in one day.

Provision made for granting uniforms for trainmen and equipment for repair and shedmen.

Choice of runs to be by seniority.

Only such men as are required to be compelled to work Saturday afternoons in shops.

Leave of absence to be granted for a reasonable period, and employees on leave holding office in the Association to be reinstated on returning.

Superintendent to discuss matters arising out of the agreement with a committee of members of the division.

BRANTFORD, ONT. — BRANTFORD MUNICIPAL RAILWAY COMPANY AND MUNICIPAL RAILWAY EMPLOYEES' UNION. Agreement effective from April 1, 1923, for one year, and from year to year thereafter except on thirty days' notice in writing by either party of their desire for a change.

The complete text of this agreement may be found in the LABOUR GAZETTE for June, 1923, pages 596-7, in the report of the Conciliation Board.

### PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1923.

THE price movement continued to be marked chiefly by seasonal changes, particularly in dairy products. The retail prices of staple foods averaged lower but in wholesale prices the decreases in grain, livestock, dairy products, and non-ferrous metals were offset by increases in textiles, lumber, and iron.

In retail prices the average cost of a weekly family budget of staple foods in some sixty cities was lower than in May, being \$10.23 at the beginning of June as compared with \$10.36 in May; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); and \$7.49 for June, 1914. Butter, eggs, and cheese were substantially lower, with smaller declines in evaporated apples and sugar. The principal advances were in potatoes and beef, and less important advances occurred in fresh pork, veal, mutton, and in bread. The total budget including food, fuel, and rent averaged \$20.72 for June; \$20.90 for May; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.92 for July, 1920 (the peak); and \$14.27 for June, 1914. In fuel, coal, both anthracite and bituminous, averaged slightly lower. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices

of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, was practically unchanged in June, being 155.1 as compared with 155.0 for May; 150.5 for June, 1922; 164.0 for June, 1921; 255.1 for June, 1920 (the peak); and 201.3 for June, 1919.

In the grouping according to chief component material, Chemicals and Allied Products, Non-Metallic Minerals and their Products were unchanged; the Textile, Wood Products, and Iron groups were appreciably higher; while the Vegetable Products and Animal Products and Non-Ferrous Metals groups were slightly down.

In the grouping according to purpose or use, there were slight decreases in both consumers' and producers' goods, an increase in Building and Construction Materials being offset by a decrease in Manufacturers' Materials.

In the grouping according to origin, farm products, both vegetable and animal, averaged slightly lower. Goods of marine origin averaged substantially lower owing to a decline in fresh fish. In articles of forest origin lumber raised the average in raw materials but manufactured articles were unchanged. In articles of mineral origin there was practically no change.

The index number of wholesale prices in Canada based upon prices of 271 articles in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 225.9 for June as compared with 228.5 in May; 224.3 in June, 1922; 242.6 in June, 1921; 356.6 in May, 1920 (the peak); and 135.3 in June, 1914. Nearly all the groups were down and there was a steep decline in fresh fish, but substantial increases in raw cotton and wool.

The index number published by the Department since 1910 has been reconstructed back to January, 1919, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913 (LABOUR GAZETTE, June, 1923, pp. 689-695). Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in its three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Departmental list) including twenty foods, fifteen manufactured goods, based upon price levels in 1913 as 100, declined to

153.0 for June as compared with 155.3 for May; 155.9 for April; 149.3 for June, 1922; 154.1 for May, 1921; 254.4 for May, 1920; and 99.1 for June, 1914. The decline was due chiefly to decreases in the prices of hogs, sheep, milk, halibut, hides, and turpentine.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, stood at 156 for April as compared with 155 for March; 152 for February; and 152 for April, 1922. Consumers' goods were lower than in March. Goods imported were unchanged, while all the other groups advanced.

The Canadian Bank of Commerce index numbers of both imports and exports were slightly lower, the former at 167.53 for June as compared with 167.92 for May and the latter at 153.78 for June as compared with 153.83 for May. The combined index of both imports and exports was down from 160.87 for May to 160.65 for June.

Professor Michell's index number of wholesale prices in Canada based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, declined to 177.2 for June as compared with 179.2 for May; 164.5 for June, 1922; 269.9 for June, 1920; and 115.6 for June, 1914. Both foods and manufacturers' goods were lower.

The table of retail prices and rentals shows the prices at the beginning of June of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every ef-

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA.

fort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost

of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices.

Sirloin steak advanced from an average of 28c per pound in May to 29.3c in June. Prices averaged higher in all the provinces. Round steak showed about the same general advance as sirloin, averaging 24c per pound in June as compared with 22.9 in May. Prime rib roast showed little change, advances in some localities being offset by declines in others. Shoulder roast was up slightly in the average from 15.1c per pound in May to 15.8c in June. Stewing beef advanced  $\frac{1}{2}$ c per pound in the average to 12c. Veal roast, was up from 17.9c per pound to 18.2. Prices averaged higher in all provinces except Quebec, Saskatchewan, and Alberta. Mutton, leg roast, advanced from an average of 26.7c in May to 28.5c in June, increases being general. Fresh pork, roast, advanced slightly in the average, while salt pork, bacon, and boiled ham remained steady. In fresh fish, cod and whitefish were slightly lower while halibut was up. Salt herring and salt cod were somewhat higher. Lard was steady.

Eggs again averaged slightly lower, fresh being down to 31.5c per dozen in June as compared with 33.4c in May and 36.3c in April, and cooking to 29.5c in June as compared with 30.6c in May and 31.7c in April. Milk averaged slightly lower, being down in Quebec, Montreal, Cobalt, Regina, and Medicine Hat. Butter showed a general decline, dairy was down from an average of 40.1c per pound in May to 36.1c in June and creamery from 44.4c per pound in May to 40c in June. Cheese also showed a general decline from an average of 34.6c per pound in May to 31.2c in June.

Bread was slightly higher at St. John, and at Regina. Flour, soda biscuits, and rolled oats showed little change. Rice was steady. Tapioca was up slightly, averaging 13.4c per pound. Canned vegetables showed little change. Onions were up from an average of 5c per pound in May to 6.4c in June. Potatoes averaged \$1.47 per 90 pounds in June as compared with \$1.29 in May, increases being general in nearly all localities. Evaporated apples declined from 20.3c per pound in May to 18.8c in June. Prunes and raisins were steady. Raspberry jam was down slightly, averaging 97.6c per 4-pound tin. Sugar declined slightly, granulated being down from 12.8c per pound in May to 12.6c in June and yellow sugar from 12.2c in May to 12c in June. Tea averaged slightly higher at 66.5c per pound as compared with 65.4 in May. Cream of tartar was up 1c per pound in the average at 68.6c.

Anthracite coal averaged \$17.50 per ton in June as compared with \$17.83 in May. Declines occurred in Halifax,

(\*Preliminary figures. (†)Nine commodities off the market, fruits, vegetables etc. One line of spelter was dropped in 1915.

St. John, N.B., Quebec, Montreal, Belleville, Niagara Falls, St. Catharines, Kitchener, Windsor, and Cobalt. Bituminous coal was down from an average of \$11.59 per ton in May to \$11.25 per ton in June. Declines occurred in Kingston, Belleville, Niagara Falls, Brantford, Cobalt, Port Arthur, and Fort William. Hard wood, four feet long, showed little change at \$12.76 per cord. Coal oil declined from 31.6c per gallons in May to 30.3 in June.

Rent was practically unchanged.

#### Wholesale Prices.

The following notes give the main points in the movement of wholesale prices during June as shown by the index number of the Dominion Bureau of Statistics, using the classification according to purpose or use.

#### CONSUMERS' GOODS.

*Food, Beverages and Tobacco.* — The index fell from 144.9 in May to 143.9 in June. In this group flour 1st. patent fell from \$7.30 to \$6.90 per barrel. Fresh halibut was 12c in June and 14c

in May. Lemons jumped from \$3.75 to \$5.00 per box of 300's. Raisins, three crown muscatel, were 12½c per lb. as compared with 16½c. Beef fore-quarters were \$8.00 per cwt. in June and \$7.50 in May. Beef hind-quarters rose from \$15.00 to \$17.00 per cwt. Fresh veal dropped a cent, to 16c. Producers' prices for milk at Toronto fell from \$1.95 to \$1.75 per 8 gal. can and in Montreal from 23c to 21c per gal. Potatoes were somewhat higher, Quebec grades rising from \$1.25 to \$1.32 per bag and Ontario potatoes from \$1.22½ to \$1.30. Eggs, specials, were 35c as compared with 36c per doz. Packing rice was \$4.45 per cwt. in June and \$4.60 in May.

*Other Consumers' Goods.* — The index for this group stood at 154.3 in June as compared with 154.1 in May; and 159.8 in April. The slight increase was due to advances in clothing. Household equipment showed no change.

#### PRODUCERS' GOODS.

*Producers' Equipment.* — The index stood at 184.5 for May and June as compared with 188.8 for April.

*Producers' Material.* — The index for this group declined to 146.4 for June as compared with 148.0 for May; and 147.2 for April.

In Building and Construction Materials the index increased from 167.3 to 171.0. This group showed rises in certain lines of lumber. Spruce 1 x 4 and up at Toronto was \$35.00 per m.b.d. ft. as compared with \$30.00 in May. Birch went to \$70.00 from \$65.00 and B.C. Fir from \$52.00 to \$55.00. Sash Cord dropped to 58c per lb. from 68c.

In Manufacturers' Materials several sub-groups recorded changes. The index for Textiles was 209.9 as compared with 205.3 in May. The chief change here was in raw cotton which was 30-5/8c in June and 27-5/8c in May.

Materials for the leather industry were 98.7 in June as compared with 103.3 in May. Beef hides fell from 12½c to 11½c, calfskins declined from 15¾c to 14½c and Sole Leather, manufacturer's green hide crops, were 43c as compared with 44c.

Materials for the metal working industries were practically stationary, being 122.9 in May and 122.6 in June. Basic pig iron declined to \$33 per ton from \$34. Wrought iron scrap was \$15 per ton in June as compared with \$12 in May. Lead increased from \$6.70 to \$6.90 per cwt., while spelter fell from \$8.30 to \$7.75 per cwt. and copper sheets from 24¾c to 23½c per lb. Tin ingots and solder were 1c per lb. cheaper, tin being 46c and solder 28c per lb.

The index for live animals for the meat packing industries dropped from 113.1 to 110.0. Choice steers at Toronto were \$8.00 per cwt. in June as compared with \$7.25 in May. Hogs slumped from \$11.10 in May to \$8.77 in June and sheep (choice) from \$8.75 to \$6.75.

Grains for the milling and other industries fell from 134.8 to 131.9. Wheat No. 1 Manitoba Northern declined from \$1.17 in May to \$1.14¾ in June and Ontario No. 2 from \$1.29 to \$1.25 per bushel. Barley No. 3 C. W. was 53c as compared with 56c. Oats No. 2 C. W. were 49c in May and 48c in June.

Miscellaneous producers' materials fell from 161.3 to 155.6. In this group shorts declined from \$31.00 to \$29.50 per ton. Straw rose from \$9.31 to \$9.50 per ton. Wood pulp, unbleached sulphite, newsgrade, was \$62.50 in June and \$37.50 per ton in May. Groundwood No. 1 was \$35.00 in May and \$37.50 in June. Raw rubber ribbed smoked sheets, fell from 29c in May to

27c in June and upriver fine rose from 27c to 28c per lb. Turpentine declined from \$2.10 to \$1.85 per gal. Flaxseed No. 1 N. W. C. was \$2.49 per bushel in May and \$2.36 in June. Glucose, 44° Baumé, increased from \$3.95 per cwt. in May to \$4.15 in June. Sugar, raw 96° centrifugal, fell from \$7.94 per cwt. to \$7.03.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

THE following notes and the accompanying tables gives the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain.

**WHOLESALE PRICES.** — The Board of Trade index number of wholesale prices in May showed a decline of 1.5 per cent to 159.0 from the previous month's level. All foods showed a fall of 1.4 per cent although cereals were dearer than the previous month. Materials dropped 1.6 per cent, the miscellaneous group being the only one to show an advance. The decrease in foods was the fourth consecutive monthly reduction, bringing the index over 6 per cent below the average for January. The index of the meat and fish group was 14 per cent lower than in January but that for cereals was 2 per cent higher. Other foods fell by over 6 per cent during the same period.

The *Economist* index number of wholesale prices was at the end of May on the base 100 in 1901-05, 200.5 and at the end of June, 195.5, reaching the low point for the present year. There were noticeable declines in cereals and meat and in minerals and in the miscellaneous group (rubber, timber, oils, etc.). Textiles gained by less than one per cent and "other foods" (tea, sugar, etc.) showed almost no change.

The *Statist* index number, in continuation of Sauerbeck's figures was 132.2 at the end of May showing a decline of 1.3 per cent from the April level. This is the fourth of the British index numbers to show a slight decline during May. For this index number this recession, the first since September, 1922, is attributed to the rise during the month of May of commodity value of the pound sterling. All groups showed declines with the exception of the sugar, coffee and tea group, which showed an increase of 1.4 per cent, due to a temporary advance in sugar prices.

**COST OF LIVING.** — The index number of the Ministry of Labour showed a decline at June 1 of one point, to 169

(July, 1914=100). Food was the only item of the budget showing any change and it showed a decline of 2 points chiefly on account of a reduction in the price of butter and also of cheese.

## Austria.

The index number of the Paritatische Kommission showed for May an increase in the cost of living of one person at Vienna of about 5 per cent, the index, (base: cost of living in July 1914=1), rising from 10,897 in April to 11,440

in May. For the month under review, however, the only increase in the elements of the budget was one of 7.5 per cent in foods, rentals showing no change and clothing and heating and lighting showing slight declines.

## Belgium

WHOLESALE PRICES. — The index number calculated by the Ministry of Industry and Labour (April, 1914=100), after a continued rise each month since the end of 1922, fell two points in

April to 480. The chief increases in the different groups were in petrol and its products (11 per cent), tobacco (6 per cent), and chemical products (3 per cent). The chief decreases were in raw rubber (8 per cent), metal products (7 per cent) resin products (6 per cent) and fertilizer (4 per cent).

RETAIL PRICES. — The index number for the Kingdom compiled by the Ministry of Industry and Labour (April, 1914=100) was 413 for May, a rise of about one per cent for the month. The

weighted index of thirty foods, on the contrary, declined 4 points or about 1 per cent to 407.

## France.

WHOLESALE PRICES. — The index number of the Statistique Générale (1901-10 = 100) dropped from 479.4 at the end of April to 469.9 at the end of May, or nearly 2 per cent. The index for foods showed a decline of 2.1 per cent, all groups contributing to the fall, and the index for materials showed a

decline of 1.9 per cent although textiles rose 1.3 per cent. The index rose slightly in June to 472.1. Information as to group movements is not yet available.

**RETAIL PRICES.** — The index number of retail prices of 13 articles in the chief cities of France published by the Statistique Générale, the base being 1,000 in 1910, was 3,387 for the second quarter of 1923, an increase of 2 per cent as compared with 3,320 for the first quarter.

**Germany.**

**WHOLESALE PRICES.** — The index number of the Federal Statistical office which is calculated for three dates in each month showed prices rising with increasing speed during May. On the base prices in 1913 = 1, the index number at May 5 was 6239; at May 15, 7105; and at May 25, 9034. The monthly average was 8170, an increase of 56.8 per cent above the April average of 5212. The index number of the value

cent in miscellaneous industrial materials, 2 per cent in minerals and metals, 1 per cent in textiles and 1.5 per cent in construction materials.

#### Switzerland.

**COST OF LIVING.** — The official index number for food given in a column of the accompanying table is from the calculation of the Eidgenössische Arbeitsamt, and is for the family of an unskilled manual worker. The index for food, heat and light has risen in about the same proportion and is slightly higher than this one for foods alone, being at 161 for the month of May.

#### India.

**COST OF LIVING.** — The official index number of the Bombay Labour Office showed a decline of 2 points during May to 153, (July, 1914 = 100) the level of August, 1918. Foods fell 2 points to 148 and clothing fell 8 points to 208. Fuel and lighting and rentals showed no change, remaining at 164 and 165 respectively. The main features were a fall in food grains, including all food grains except jowari, and a rise in refined sugar.

tics showed a decline of 1.88 per cent in May from the April level, reaching 156 on the base 1913 = 100. There were declines in the farm products, cloths and clothing, fuel and lighting, metals and metal products, building materials, chemicals and drugs and miscellaneous groups, while foods, and house furnish-ing goods showed no change.

The index number of the Federal Re-serve Board showed for May a decline of 2 points to 167 (1913 = 100). Goods produced fell 3 points to 162 and goods imported fell 1 point to 158, goods ex-ported falling 7 points to 179. Raw materials and producers' goods showed declines while consumers' goods showed no change.

Bradstreet's index number of whole-sale prices was \$13.0895 at July 1, or 2.2 per cent lower than at June 1. This was 6 per cent below the high point for the year at March 1, and 8.1 per cent above July 1, 1922. The level reached was 50.2 per cent above August 1, 1914. Of the thirteen groups, twelve showed declines during the month un-der review, while coal and coke showed no change.

Dun's index number for July 1 show-ed a further decline of 1½ per cent from the figure, reaching \$188.711. It was thus 2½ per cent below the high point of the year, which was reached at April 1. The index was still 8½ per cent higher than a year previous. The de-

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of capital towns. (g) 15th of month. (h) Four chief cities. (i) January 1913-December 1920, 22 foods.

cline for the month under review was contributed to by all groups except meats which rose 5.2 per cent and dairy and garden products which rose 2.4 per cent. Breadstuffs declined 3.7 per cent; clothing, 3.2 per cent; metals, 2.1 per cent; the miscellaneous group, 1.8 per cent and other food, 1.6 per cent. All foods declined slightly.

RETAIL PRICES OF FOOD. — The retail food index of the Bureau of Labour Statistics showed an increase of 0.2 per cent in May as compared with April reaching 143. The chief increases were in onions, oranges, potatoes, pork chops,

granulated sugar, sirloin steak and strictly fresh eggs; the chief decreases were in butter, cabbage, cheese, flour and macaroni, while other articles moved little or showed no change. For the year period the increase in all foods was 3 per cent.

COST OF LIVING. — The official index number of cost of living for Massachusetts compiled by the Special Commission on the Necessaries of Life was  $\frac{3}{8}$  of one per cent higher in May than in April. Food and shelter increased while clothing, fuel and light decreased slightly and sundries remained unchanged.

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

THE two legal decisions summarized below have reference respectively to a case of workmen's compensation in

Quebec and an action against a railway baggageman at Montreal for alleged intoxication when on duty.

Worker at fixed rate of wages debarred from compensation for accident in Quebec if receiving over \$1,500 including overtime but overtime not included when worker receives a fixed wage.

An injured workman in the Province of Quebec brought an action against his employer under the Quebec Workmen's Compensation Act, claiming \$3,228.80, made up of \$228.80 for temporary total incapacity, and a capital of \$3,000 for permanent partial incapacity. The amount of his claim was based on a fixed rate of wages of 53 cents per hour,

and on the annual earnings of other employees in the same class of work, amounting to \$1,400. The employer denied liability, alleging that the plaintiff during the twelve months preceding the accident had earned and was paid \$1,797.15. The plaintiff answered that any amount he earned and was paid in excess of \$1,400 was for overtime work

and he was not obliged to take this into account in calculating his yearly remuneration.

The action was dismissed by the Superior Court on the following grounds:

Considering that during the twelve months next before the accident complained of in the case, the actual remuneration allowed to plaintiff and paid to him for his wages has exceeded the sum of \$1,500, and, in such a case, the Workmen's Compensation Act does not apply;

Considering that plaintiff's case does not fall under the exception of sect. 7328 R.S. 1909, as amended by the Act 9 Geo. V., ch. 69, sec. 2, whereby the remuneration received

for overtime work should not be taken into account in calculating his year's wages, because plaintiff did not receive a fixed wage, but was only working at a fixed rate of wages, which is not the condition which the exception has in view;

Considering moreover that it has not been proven that any remuneration received by plaintiff was overtime work;

Considering that plaintiff has therefore failed to establish his right to claim under the Workmen's Compensation Act and the other material allegations of his plea; doth dismiss plaintiff's action with costs.

(*Quebec — Grow vs. Dominion Engineering Works*).

#### **Intoxication when on duty forbidden railway baggagemen. Duty begins on reporting for work.**

A railway baggageman reported for duty in an alleged intoxicated condition, but before his arrival he had been replaced by another employee. He was then arrested on the charge of having been intoxicated while on duty, in violation of section 423 of the Railway Act of 1919. This section reads as follows:

Every conductor, locomotive engineer, train dispatcher, telegraph operator, station agent, switchman, signal man, bridge tender or any other person who is intoxicated, or under the influence of liquor, while on duty, in charge of or in any employment having to do with the movement of trains upon any railway, is guilty of an offence, and shall be punished by fine, not exceeding four hundred dollars, or imprisonment, not exceeding five years, or both, in the discretion of the court before which the conviction is had, and according as such court considers the offence proved to be more or less grave as causing injury to any person or property, or as exposing or likely to expose any person or property to injury, although no actual injury occurs.

At the trial, which took place at Montreal, it was held by the Court that the functions of the accused were not within the meaning of the section of the law under which the charge was laid, and he was discharged. A reserved case was granted by the Court of Appeal, and this Court held, when the case subsequently came before it, that the section applied and that there was error in dis-

charging the accused. This judgment was confirmed by the Supreme Court. The accused then appeared before the magistrate for trial, when he was allowed to produce additional evidence. He was found guilty, but another reserved case was granted by the Court of Appeal, the four following questions being reserved:

1. Having been replaced by another employee before his arrival to report for duty under the orders of a person in authority having the power to replace and suspend him, was the accused on duty at the time of his arrival to so report for duty?

2. Was it illegal to permit the introduction as evidence of a deposition taken at the preliminary enquiry of an absent witness when the said witness had been also heard at the trial?

3. Was the evidence of a witness as to the condition of the accused properly admitted as rebuttal evidence?

4. Was not the said conviction erroneous in point of law?

The Court of Appeal rendered the following judgment on these points:

It is now adjudicated and finally determined, that there was no error in the ruling of the trial judge refusing a reserved case, and the application of the accused for a stated case is dismissed.

# THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—F. A. ACLAND.

Volume 23

AUGUST, 1923

Number 8

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**I**N addition to the regular monthly articles, in this issue of the LABOUR GAZETTE, there appear quarterly articles on unemployment in trade unions, the Employment Service of Canada, fatal industrial accidents and immigration. There are also a number of special articles on various subjects of industrial interest, among which may be mentioned a summary of the report of the United States Coal Commission on the anthracite mining industry, an account of the settlement of a dispute of coal miners at Canmore, Alberta, and of strikes of steel workers and coal miners at Sydney, Cape Breton.

### Monthly summary.

During June there was a decline in employment, as shown by the reports of the Employment Service of Canada, as compared with the preceding period, while in contrast with June, 1922, a higher level was maintained. The decline during this period may be due chiefly to a seasonal lull prior to the active demand for harvesters anticipated in the following months.

The average cost of the weekly family budget of 29 staple foods was

\$10.17 at the beginning of July, as compared with \$10.23 in June; \$10.27 in July, 1922; \$10.96 in July 1921; \$16.92 in June, 1920 (the highest point reached) and \$7.42 in July, 1914.

The time loss due to industrial disputes during July was greater than in the previous month and also greater than in July, 1922. Twenty-one disputes began or were in progress during the month, involving 17,104 employees, and causing a time loss estimated at 310,608 working days. Corresponding figures for the previous month were 25 disputes involving 6,908 employees and a time loss of 55,609 working days, and for July, 1922, 21 disputes involving 15,553 employees with an estimated time loss of 255,734 working days. At the end of July there were 16 disputes in progress, involving 2,821 employees.

### Proceedings under the Industrial Disputes Investigation Act.

Two reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in July.

Three applications for the establishment of Boards were received, and one Board was established during the month.

**International  
Union of League  
of Nations  
Societies.**

The seventh conference of the International Union of League of Nations Societies was held at Vienna on June 24 to 27. Delegates were present from twenty-four national societies. Seven committees were appointed, which submitted recommendations on the various subjects entrusted to them, which were adopted by the conference. The committee on internal questions and propaganda recommended that each national society or federation should form branches in every part of its country, and should make special efforts to secure that teachers instruct their pupils in schools and universities with regard to the constitution, achievements and aims of the League of Nations and the International Labour Office; that they enlist the support of national organizations of war veterans, and that propaganda be directed towards the industrial classes in favour of all the constitutions of the League of Nations authorizing especially the work of the International Labour Office.

The Conference adopted a resolution to appoint a permanent sub-committee to examine school and college text books with a view to discovering how far they contain statements inimical to the friendly co-operation of nations. A number of resolutions were adopted embodying certain principles for safeguarding the rights of minorities. A resolution was adopted favouring greater freedom of trade between nations, the removal of restrictions on the import, export and transit of goods and the establishment of an International Commercial Court by the League of Nations. It was also unanimously resolved "that foreign workpeople should be employed in every country on the same terms as native work-people." Other resolutions

were adopted dealing with the promotion of intellectual co-operation among nations, and the procuring of a settlement through the League of Nations of the questions of reparations, inter-allied debts and the security of frontiers.

The conference of 1924 will be held at Lyons, France.

**International  
Association on  
Unemployment.**

A general meeting of the International Association on Unemployment will be held at Luxembourg on September 9, 10 and 11. Mr. Neil Reuter, Minister of State and President of the Grand Duchy of Luxembourg, will act as Honorary President. The following subjects have been placed on the agenda for discussion (1) Reorganization of the Association. (2) Emigration and settlement of unemployed persons abroad considered as a remedy for unemployment. (3) The relations between unemployment benefits and the development of possibilities of employment. (4) The problem of unemployment amongst intellectual workers (professional and technical workers, dismissed officials, etc.) (5) Vocational guidance in relation to the needs of the labour market.

This Association was founded in 1910 as the result of an international conference held in Paris. Immediately before the war it consisted of seventeen national sections and one international section composed of other international organizations interested in the prevention of unemployment, and included representatives of the governments of nine sovereign states, 30 states, provinces and departments, 130 municipalities and many local institutions interested in the prevention of unemployment, workers' and employers' associations, as well as individuals prominent in science and politics.

**British  
view of  
Empire  
settlement.**

A committee of the Federation of British Industries, which is the British counterpart of the Canadian Manu-

facturers' Association in a recent report on Imperial trade, laid stress on the value of Empire settlement both to Great Britain and to the Dominions. Provided that the available labour resources of the United Kingdom are not unduly depleted the advantages are declared to be mutual. For both economic and political reasons it is desirable that the Dominions should continue to draw their population from the United Kingdom. "The Federation do not consider", the report states "that the present abnormal unemployment situation can be entirely met by speeding up Empire settlement, but believe it should be regarded as a means of remedying fluctuations of trade by developing the best markets of the United Kingdom and thereby minimizing the risk of unemployment throughout the United Kingdom. They recommend that special representatives of the Overseas Settlement Office should be stationed in the Dominions with a view to negotiating on the spot, with the minimum delay, more far-reaching schemes than have at present been put into operation. They also consider that special attention should be given to block-settlement, i.e., the offer of facilities for the settlement of a considerable number of families together. They point out that as this settlement of families implies that the head of the family must be able to earn enough to keep his dependents, means should be provided for temporary financial help for families during their earlier life in the Dominion". The Ontario Government's scheme for bringing out juveniles is described as one of the soundest yet devised, since juveniles are sufficiently adaptable to undertake work on or in connection with the land and develop more easily than adults into the required type of citizen.

**Legislative  
Year Book of  
Winnipeg  
Labour Council.**

The "Legislative Year Book" recently issued by the Winnipeg Trades and Labour Council is

a valuable work of reference on the subject of existing labour legislation in the Province of Manitoba, and also of the main enactments of the Dominion Parliament on subjects relating to industry. While the publication is intended primarily for the use of union members in the Province, who are advised to study the various labour laws "in order to familiarize themselves with the statutes which more directly affect them in their daily life", the carefully prepared summary which it contains should prove of service in the wider and growing circle of the general public who are interested in industrial and social subjects. Its production was rendered possible by the support given to the enterprise by the business and professional men of the city, and the preface makes acknowledgment of this obligation. Full summaries and in many cases also the full text, are given of many provincial laws of special interest to employers and employees, including the Bureau of Labour Act, the Factories', Shops Regulation, Steam Boiler, Workmen's Compensation, Minimum Wage, Fair Wage, Industrial Disputes, Elevator, Mothers' Allowances, Public Building, Mechanics Liens, and many other Acts, which are frequently under discussion. In the section dealing with Dominion labour legislation information is given on the criminal law relating to trade combination, picketing, etc., the Trade Union Act, the Conciliation and Labour Act, the Labour Department Act, the Industrial Disputes Investigation Act, the Employment Office Co-ordination Act, the Technical Education Act, the Fair Wages resolution, and many other measures dealing with matters which fall within the legislative competence of the Dominion Parliament. The publication concludes with an account of the Winnipeg Trades and Labour Council, giving a summary of

its activities since it was organized in 1894.

**Protection  
for female  
learners in  
Ontario.**

A recent order of the Minimum Wage Board of Ontario amends the orders already in force by adding to each order

the provision that the regulations are to apply not only to all time-workers, but to all piece-workers during the first six months of employment in the affected industry, but that in regard to piece-workers of more than six months experience it is sufficient if at least 80 per cent of them receive wages conformable to the order. It is also provided that any employee required to wait on the premises shall be paid for the time thus spent, the amount to be paid to piece-workers being at the rate fixed for the class to which they belong.

**Minimum  
wages of female  
industrial  
learners in  
British  
Columbia.**

Reference was made in the last issue of the LABOUR GAZETTE to a minimum wage conference held in Vancouver in July to consider a proposed revision of

the existing weekly rate of \$14 for female workers in industrial establishments. After hearing the arguments of both parties concerned the Board decided to leave this rate unchanged. The conference also considered the question whether or not any change should be made in the 48-hour working week now established for the same class of employees, the employees' representatives endeavouring to secure a reduction in the legal working hours from 48 to 44, but on this subject also the Board was opposed to any change in the existing rule. Some alterations, however, were ordered in the special rates for learners and apprentices. Henceforth no distinction will be made in the rate of pay of apprentices and adult learners. Industries are classified into three groups according to the degree of skill required in the worker. In the first group the workers will receive \$8 a week for

the first two months of their employment, increasing to \$10 in the second, and to \$12 in the third two months. In the second group the wages are the same as in the first group in each of the three periods, but the periods are of four instead of two months. In the third group the periods are of six months each; the minimum wage in each period being respectively \$7, \$10 and \$13.

**Reserve  
funds for  
Workmen's  
Compensation.**

The reason for the reserve or pension fund which is built up by the various Provincial Workmen's Compensation

Boards is explained in an editorial note appearing in the current issue of *Industrial Canada*, the official organ of the Canadian Manufacturers' Association. The note is in reply to the charge which is sometimes made that the amount of this fund is unnecessarily withdrawn from industry and retained by the Board without reason.

"As a matter of fact", it is stated, "this fund is not in any way intended to meet future accidents or remote contingencies, but is actually only sufficient to pay for accidents which have already happened and awards which have been actually made, the fund applying only to pension cases. For example, when a pension of \$40 a month is awarded, the present value of the pension is worked out on an actuarial basis and the amount required to pay the pension for the life of the beneficiary is transferred to the reserve fund, from which all pensions are paid. Some pensioners die earlier than their expectation of life; others live longer, but the reserve fund is designated to be just sufficient to pay all pensions awarded. The only other reserve of any kind maintained by the Ontario Board is a small disaster reserve fund, which is designed to assist in meeting any disaster or catastrophe that may happen in any class of industry which would entail an undue burden on the class. This fund gets only one per cent of the assessments

made each year, and so far only three withdrawals have been made. It is of advantage in that prevents any undue raising of assessment when a catastrophe occurs. It will serve to illustrate the necessity for a reserve fund if it is explained that had provision not been made at the time, employers of the present day would be paying for accidents which happened several years ago in munition plants. Instead, the munition plants paid in full for their own accidents when they occurred."

**Industrial  
training  
for the  
feeble minded.**

An article by J. P. Downey, superintendent of the Ontario Hospital, Orillia, in the June issue of *Social*

*Welfare*, tells of the success reached there in teaching mental defectives useful occupations. He says that occupational training is the most important feature in promoting health, happiness and contentment among the feeble-minded as well as being of economic value to the State. The training school for juvenile idiots was established at Orillia in 1888 with a class of from 30 to 40 pupils. It is divided into two classes, the physical and the mental. The school of letters develops concentration, stirs the ambition, broadens the child's outlook and conduces materially and directly to his contentment and happiness as well as sharpens those faculties which are essential to success in industrial employment. It is pointed out that while there must be a zealously maintained limitation to the intellectual education of the moron or imbecile, there is no danger of retrogression through manual training. It can be prosecuted to the highest degree that the capabilities of the patient will permit without any danger of mental deterioration or collapse. Among the kinds of work accomplished by the patients has been the clearing and cultivation of the land, the erection of cottages and other buildings, the construction of a wharf, of a new waterworks system, and also of a Provincial highway

through the institution's property. Last year four acres of land, which had formerly been part of an old mill pond, yielded 1,650 bushels of potatoes. In the sewing-room with two paid supervisors, all the clothing for the female patients, all the household linen and other accessories are manufactured. A tailor shop with three paid employees does a like service for the male inmates, and a baker with six patients makes all the bread. Out of a total population of 1,129 at the hospital on February 7, last, 720 were workers, 407 boys and 313 girls. Of these 88 boys and 60 girls were in kindergarten and other classes. A considerable number were engaged as house workers and in the dining rooms and kitchen of the institution. Others were engaged at weaving, basketry, etc.; knitting, sewing, fancy work, mattress and mat making; in the tailor shop, laundry, carpenter shop, shoe shop, paint shop, as masons, in the boiler room, vegetable room, green house and root cellar, with the farm, bush and coal gangs and in the dairy and stables.

**Unemployment  
Insurance  
and Ontario  
Social Service  
Council.**

A report prepared by the Industrial Life committee of the Social Service Council of Ontario, which was presented but not read at the recent annual meeting of the Council, deals with the problems arising out of unemployment. Unemployment insurance, under government control or supervision, is recommended as the only possible remedy except charity. Plans for establishing any system of such insurance, however, can only be considered in connection with a general policy for promoting industrial prosperity which would make employment regular, so that only those cases which remain after industry has been fairly stabilized would require to be dealt with through insurance. "Unemployment insurance", the report states, "is at best a palliative, not a cure, for the evil at which

it is aimed. No system of insurance anywhere adopted as yet undertakes to provide fully for the living of the worker and his dependants while out of work . . . The least that can be done by insurance is to preserve the worker from absolute destitution when out of work. But a system which would do that, and do it without the demoralizing effects of the dole, would be well worth trying. The accumulation, therefore, under Government control or supervision in times of industrial prosperity, of a fund which would be available in times of depression for the relief of the unemployed in a systematic way, seems a necessity."

**Miners' Welfare Fund in Great Britain.**

Some account was given in the LABOUR GAZETTE for April, 1922, of the Miners' Welfare Fund organized in Great Britain under the Mining Industry Act of 1920. This fund which is maintained by a charge of one penny per ton levied upon the coal output, has secured the fullest support of both employers and workers in the mining industry. In normal years the levy provides an annual income exceeding one million pounds. The Central Committee of the fund, which is entitled to spend one-fifth of the annual income on work benefiting the industry as a whole, has undertaken valuable research work concerning working conditions in deep mines with high temperatures, the combating of danger from coal dust and other causes of explosions, and generally has worked to secure greater safety for miners. The local committees formed in each area, which control the expenditure of four-fifths of the fund, have provided nursing and hospital centres, technical training institutes, and public recreation grounds and playing fields.

**The United States Government and Industry.**

The eleventh Annual Convention of the United States Chamber of Commerce which was recently held was attended by 3,000 representatives of business organizations which had a membership of 800,000 commercial and manufacturing firms in America. An address was given at this Convention by Mr. Herbert Hoover, United States Secretary of Commerce, on present conditions in the United States. He said that efficiency of production had increased from 10 to 15 per cent per capita since the period immediately preceding the war. Industries furnishing articles of comfort or convenience showed a growth of 60 per cent during the past ten years which he claimed was an indication of progress, not extravagance. He gave examples of the work done by the Department of Commerce in the elimination of waste through co-operation with the industries themselves and stated that in one industrial group savings in production cost thus brought about already exceed \$25,000,000 a year. He considered that government had a definite relation to the advance and maintenance of prosperity not as an agency for production and distribution of commodities, not as an economic dictator, but as the greatest contributor in the determination of facts and of co-operation with industry and commerce in the solution of its problems.

A number of important resolutions were adopted by the Convention. It expressed the conviction that the United States should adhere to the protocol providing for the establishment and maintenance of a permanent court of international justice. It endorsed the suggestion made by the International Chamber of Commerce at Rome that a general economic conference should be called for the adjustment of the present economic disorders and pledged its assistance to the full extent of its power. It promised continued assistance to the

United States Coal Commission in the collection of information and incidentally reiterated its adherence to the open shop principle.

**Apprentice training in United States tile industry.**

A plan for apprentice training in various branches of the building industry is being carried out jointly by the Associated Tile Manufacturers, the Tile and Mantle Contractors Association of America, and the Bricklayers, Masons and Plasterers' International Union of America. Twenty scholarships are provided at Dunwoody Institute, Minneapolis, with a three-months' course of training in summer. Each scholarship includes travelling expenses, \$10 a week for thirteen weeks to cover board and room, cost of tuition and books, and use of all tools and construction materials. One scholarship will be awarded in each city included in the scheme, the candidate from each city being selected by a local joint arbitration board of the employers' association and the trade union. Candidates must be between 16 and 25 years of age, and must agree to serve out their apprenticeship of three years, the three months' course at Dunwoody Institute being recognized as equivalent to six months of this term.

**Compulsory profit-sharing proposed for Mexican mines.**

A commission recently appointed in Guanaajuato, one of the States of Mexico, to draft a law to provide for compulsory profit-sharing in the mining industry, has prepared a draft report, an outline of which is contained in a recent issue of the *Engineering and Mining Journal-Press* (New York). It is proposed that the operators pay a percentage of the value of their product to the state government, which would apply the fund so created to the organization of co-operative insurance for the benefit of the workers. The proposed plan would not be profit-sharing in the strict sense as the owners would be required to pay even when no profit is shown in

their undertakings. It is suggested that the operators pay a percentage of the value of their product, depending upon the price of silver. When the metal is below 60 cents per ounce no payment will be required; when the price is between 60 cents and 65 cents the payment is to be 5 per cent of the difference between 60 cents and the actual price; when it is above 65 cents, 7 per cent of the difference will be required; and when it is above 70 cents one-half of one per cent will be added for each additional cent of price. Of the gold produced, one-tenth of one per cent is to be paid when silver is above 60 cents. At the current silver price of about 66 cents the operators would have to pay 7 per cent of 6 cents, the difference between 60 and 66 cents, or 0.42 of a cent per ounce. Only men earning less than 100 pesos per month are to benefit by the scheme. It is claimed that the plan would save the government considerable expense, as no inspectors will be needed, the operators paying the money at the same time as they settle the taxes on their product; while the operators will be spared the inspection of their accounts, as well as the trouble of making a direct division among their workmen.

The commission also propose that minimum wages shall be fixed by local committees; that in cases of sickness, workers shall receive half wages and medical attendance, and in case of death one year's full wages shall be paid to the next of kin.

**Hungarian bill concerning trade unions and trade disputes.**

The Government of Hungary has introduced a bill concerning the right to work, the rights of trade unions, and conciliation and arbitration. The bill makes it unlawful to prevent any person from exercising a lawful trade, from employing or discharging workers or from fixing the conditions of labour, or to force any person to abstain from working or to undertake any work in any of the in-

dustries covered by the bill. Any wilful restriction of production will be considered a violation of the right of exercising a trade. Acts of sabotage involving damage to property will be punishable under the penal provisions of the bill. The right to work must not be construed so as to entitle any employer or worker to commit an unlawful breach of contract, provided, however, that concerted stoppage of work will be permissible in connection with labour disputes involving wages, etc., if conciliation proceedings have terminated unsuccessfully. Strikes and lock-outs will be prohibited in all public enterprises and in private enterprises engaged in public utility services.

Whenever a serious industrial dispute has taken place which the parties themselves are unable to settle, the matter must be submitted to conciliation. If the conciliation procedure fails the case is to be transferred to a board of arbitration but only if arbitration is accepted by both parties. If one of the parties refuses to submit to arbitration, the Minister may order that conciliation proceedings be re-opened, and he is bound to do so at the request of one of the parties to the dispute. The members of the board of arbitration will be elected by employers and workpeople (or their respective trade unions) in equal numbers, and they will choose their own chairman, who must be an independent person. The board will regulate its own procedure and decide all questions by simple majority vote. The decisions of the board will be binding and the parties will have no right of appeal.

The bill exempts public utility services from the machinery of conciliation. Complaints of the staffs in such services must be laid before the authorities. If the workers refuse to accept their decision the question at issue will be brought before a board of arbitration. A further important reservation is that all dis-

putes in the railway, postal, telegraph and telephone services shall be decided solely by the higher authorities themselves.

The rules of any trade union must be submitted for approval to the Minister of the Interior and the Minister of any other department concerned. If the rules are approved the union acquires corporate rights. No person may be compelled to join or not to join a trade union, and it is declared unlawful to use coercive means against any person or to restrict his opportunities of employment with a view to inducing him to join or to leave a trade union.

It is left to the discretion of the Minister of the Interior to decide what organizations of employers may be regarded as coming under the provisions of the bill. Employers associations may admit to membership any person or firm owning a manufacturing, mining or trading establishment in Hungarian territory.

The bill contains detailed provisions concerning general meetings of unions (in which are vested supreme powers), their rules, the rights and duties of managing bodies, the financial administration, and the supervision of unions by municipal and government authorities.

An enquiry into the activity of trade unions may be ordered by the Minister of the Interior at his own discretion, and he is empowered to order the dissolution of any trade union if it violates any law, or offends against public order or morals, or if it appears dangerous to the common weal or to Hungarian national ideas.

Infringement of the provisions of the bill will be punishable by imprisonment for a period not exceeding three years and by a fine not exceeding 40,000 kr., except in case of offences for which severer penalties are prescribed by other legislation.

Old age  
pension plan  
of Czecho-  
Slovakia.

A bill providing for old age and invalid insurance for all manual workers and "white collar" employees of Czecho-Slovakia, in steady employment, has recently been drafted by a committee mainly comprising Social Democrats. Under the bill the word "invalid" is construed as applying to incapacitated persons who are no longer able to earn two-thirds of a specified living wage. The old age dole will be granted to all insured persons who have reached the age of sixty-five. Widows will also receive the benefits of the insurance act in event of invalidity or attainment of the prescribed age, and provision is made for orphans until their seventeenth year. Every participant will be required to contribute an average premium amounting to six per cent of his total wages or salary, and each beneficiary will receive a fixed annual payment, the same in every instance, which will be augmented by a State grant. The burden of insurance payments will be borne equally by employer and employee. The State's annual contribution to the scheme will be about \$7,400,000. It is stated that this measure is assured of passage, the Czecho-Slovakian Social Democrats having entered the coalition government on the understanding that an old age and invalid insurance law would be enacted.

Conventions of the following Canadian labour organizations and international labour organizations having affiliations in Canada will be held during the months of September and October:

Trades and Labour Congress of Canada, at Vancouver, B.C., on September 10.

Canadian Brotherhood of Railroad Employees at Calgary, Alta., on September 17.

National Federation of Federal Employees at Denver, Colo., on September 3 to 8.

Coopers' International Union of America, at Philadelphia, Pa., in September.

International Association of Fire Fighters, at Montreal, Que., on September 10 to 15.

United Textile Workers of America, at New York, N.Y., on September 10 to 17.

Bakery and Confectionery Workers' International Union, at Los Angeles, Cal., on September 10 to 20.

International Brotherhood of Boiler-makers, Iron Ship Builders and Helpers of America, at Kansas City, Mo., in September.

International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, at Philadelphia, Pa., on September 10 to 24.

Metal Polishers' International Union at Cincinnati, Ohio, on September 17.

Operative Plasterers and Cement Finishers' International Association, at Denver, Colo., on September 17 to 30.

Commercial Telegraphers' Union of America, at Montreal, Que., on October 1 to 7.

American Federation of Labour, at Portland, Oregon, on October 1 to 13.

Journeymen Stone Cutters' Association of North America, at Cleveland, Ohio, on October 8 to 22.

The fourteenth annual convention of the Quebec Provincial Council of the International Brotherhood of Carpenters and Joiners, was held at Montreal during the first week of July. It was decided to request the federal government when appointing commissions to investigate into the price of fuel, or food, or materials required for the sustenance of the population, that such commissions be compelled to show the cost price of the commodities under investigation and how they compare with the selling price. It was also decided to request the provincial government to pass an act making provision for a fair wage clause

similar to the federal act; to amend the Quebec Workmen's Compensation Act along the lines of the Ontario act; to provide for strict enforcement of the Lord's Day Act; and to appoint a commission to investigate cases of insufficient wages paid to women and girls in the factories with a view to establishing a fair wage. It was also decided to protest against the admission to Canada of skilled men in the building trades, especially while Canadians are leaving Canada for the United States.

At the recent convention of the Great War Veterans Association at Vancouver, a resolution was passed calling upon the Government to continue the measure of soldiers' civil re-establishment, making provision for the employment of ex-vocational students in industry, business, in railway service, etc., thus enabling them to qualify for permanent positions. By another resolution it was pointed out that under the working agreements between the Canadian National Railways and the men's representative, in the event of a reduction of staff seniority of service governs, and as this affects a majority of ex-service men now employed, the opinion was expressed by resolution that the seniority of all members of His Majesty's forces should be dated as from the date on which they joined the forces, such seniority rights to be applied in all instances, except for promotion in the service, and that all ex-members of His Majesty's forces be given preference for employment and promotion.

The Department of Labour of the Province of Quebec is reported as taking active steps to prevent the alleged use by icemen, fruit vendors and other delivery men, without permits, of boys of tender age who are often called upon to carry burdens beyond their strength. It is alleged that the boys receive as little as 50 cents or \$1.00 a week for their services. In Quebec special "school vacation permits" to work are issued in needy cases for children, but these are good only in the holidays. Most of the children holding such per-

mits work as messengers in department stores, drug stores, groceries, butcher and tailor shops, or go to work in factories, and some girls work for dress-makers and milliners.

At a recent convention of the Master House Painters and Decorators of Canada a resolution was adopted in favour of the system of apprenticeship as outlined by Mr. J. M. Pigott. (see LABOUR GAZETTE, March, 1923, page 275).

Reference was made in the LABOUR GAZETTE for March (page 270) to the action of the Quebec Legislature at the last session in making provision for instruction in paper making "with a view to recruiting expert workmen and technical men for the manufacture of pulp, paper and other fibre products", and for the establishment of a forestry school. Progress has since been made, it is stated, towards the operation of a paper school in the Province, to be annexed to the technical school at Three Rivers. This situation has been chosen as being the centre of the pulp industry of the St. Maurice Valley. A forest rangers' school will be opened at Berthierville in the first week of September.

Alberta officials concerned with the administration of the Children's Protection and Mothers' Allowances Acts at a conference last month at Lethbridge, resolved that the former act was out of date and should be remodelled to meet the special requirements of the West. The Act was modelled on the Children's Protection Act of Ontario, where, it is claimed, conditions differ widely from those of Alberta.

At a meeting of the Canadian Railway Board of Adjustment No. 1 at Montreal, Que., on June 12 to 14, Mr. George Hodge, assistant general manager of the Canadian Pacific Railway Company, was re-elected chairman of Board, and Mr. Ash Kennedy, assistant grand chief of the Brotherhood of Locomotive Engineers, was elected as vice-chairman. Fourteen decisions were given during the sittings. It is announced that since the inception of the Board

in August, 1918, the number of decisions given has been 1,769, and a number of other settlements have been made.

The system of group insurance for civil servants in Manitoba which was established by the provincial government in 1921 (LABOUR GAZETTE, July 1921, page 859) will be discontinued after August 31 as announced by the government at the last session of the Provincial legislature. The maximum policy under the scheme was \$3,000, and employees who had policies of this denomination were required to pay \$13, or one-fourth of the premium for the year.

Mr. A. B. Browning, of Edmonton, the first chairman of the Minimum Wage Board of Alberta, has resigned that position, which he had held since the Board was formed last year. His successor has not yet been named.

Workmen's Compensation administration in New Brunswick was recently reorganized, causing some delay in the payment of compensation to injured workers and their dependents, but it is stated that regular payments have now been resumed. The readjustment of rates in certain industries is now under consideration; notices of increased assessments in sawmills and woodworking establishments have already been issued.

The Department of Trade and Commerce announces that a Canadian Trade Commissioner's Office will be opened in September at Copenhagen, Denmark.

A plan is under consideration to provide pensions and superannuation for civic employees at Ottawa through group insurance. It is stated that about 250 employees would benefit under such a scheme. Group insurance, on a contributory basis, is proposed for all permanent employees, the amount of benefits varying from \$500 to \$1,500 a year according to length of service.

The City Council of Montreal is reported to have under consideration a

bylaw to prohibit, under heavy penalties, smoking in workshops, roperies, stables or other premises where there are shavings, straw or other inflammable material. A large number of recent fires in the city are said to have been due to carelessness on the part of smokers in such establishments.

A final decree making permanent a temporary injunction obtained by the United States Government in Federal Court at Chicago on October 5, 1922, against the Railway Employees Department of the American Federation of Labour, its officers and others, restraining them from interfering in any manner with operations of railroads during the nation-wide shopmen's strike, was entered on July 12 by Judge Wilkerson, of the United States District Court of Chicago. The decree making permanent the injunction affects approximately 400,000 railroad employees. While the strike has not been formally declared off, it is reported that the men are all back at work.

The Builders' Exchange of Phoenix, Arizona, having no apprentices available, recently formed a class for training bricklayers, the public school principal co-operating. At the end of the first course the best pupils were offered a second course. Prizes were offered to those doing the best work at the end of the term. Some of the boys are now out on regular work.

It has recently been announced that commencing August 1, employees of the Proctor Gamble Company, soap manufacturers with offices and plants in thirty cities in the United States and Canada, will be guaranteed steady employment. The innovation, it is stated, is an extension of a profit-sharing plan which was made the policy of the company many years ago. Under the new plan an employee is guaranteed full time for not less than 48 weeks in the year, regardless of seasonal depression in industry. The customary holiday closing or a shut-down caused by fire, flood, strike or other extreme emergency, however, is excepted.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation, Strikes, Prices.

#### The Labour Situation

**T**HE trend of employment as reported by employers at the beginning of July continued to be upward, although the expansion was somewhat less pronounced than in the preceding month. At the beginning of July, the percentage of unemployment among the members of trade unions was 3.4 as compared with 4.5 at the beginning of June and 5.3 at the beginning of July, 1922.

The Employment Service of Canada reports a decline in the daily business transacted during June by the offices in the various provinces, as compared with the previous month, but there was slightly more activity than in the corresponding month of last year.

The following is a brief summary of employment conditions at the end of July, 1923, as reported by the superintendents of the offices of the Employment Service of Canada:

The commencement of haying operations in the Maritime Provinces created an active call for workers but applicants were not available to fill the demand. Apart from highway improvement and power development work, little activity was reported in the construction groups. The demand for road workers, graders, etc., was sufficiently brisk at all the offices to supply employment to numbers of labourers. Sawmills were busy and a few loggers and choppers were sent to the lumber camps. The offices were successful in filling many vacancies for housemaids, experienced cooks, etc., but the demand continued to exceed the supply.

Improvement was noted in employment generally throughout Quebec. A fair demand for agricultural workers

was reported. In the building industry increased calls were received for bricklayers, plasterers and building labourers, while road construction workers were in great demand. Orders for bushmen were very numerous in Montreal and Quebec but few vacancies were reported in the other sections of the province. A few requests for asbestos miners for the Thetford district were received. In the manufacturing industries activity was reported, especially in the metal trades and clothing and textile industries. There was a normal demand for longshore men and marine workers. In the personal services group the demand for cooks, housemaids, etc., was in excess of the supply.

In Ontario the demand for farm labour was very brisk with special calls for fruit pickers for the Niagara Peninsula. The supply of general farm labour, however, was insufficient to meet the demand. Calls for carpenters, bricklayers, masons, building labourers, and road construction workers and teamsters, were very numerous, while a falling-off in casual work was reported. Repairs and extensions to steam and electric railway lines gave employment to many, especially in the vicinity of North Bay, Cobalt, Timmins, Toronto and St. Thomas. The logging group was active with rivermen, bushmen, sawyers, etc., required at northern points. In manufacturing, requests for moulders, coremakers and general factory help for the metal trades, were received while there was a continued demand in the textile industries. Calls for cook generals had fallen off slightly but the supply is still less than the demand. An increased number of casual jobs for women were offered latterly.

The agricultural demand was particularly keen in Manitoba and, while a good response had been received numbers of vacancies remained unfilled. With residential construction predominating, an improvement was shown in the construction groups. Calls for labourers and railway maintenance workers were increasing. Little difficulty was experienced in placing bushmen and rivermen while there was a demand for sawmill labourers at Winnipeg.

Early calls for harvesters had been received at the office in Saskatchewan and the number of unfilled vacancies for general farm help increased daily. The building and construction operations in this province continued to employ numbers of building tradesmen and labourers, while railway construction and repair work created a keen demand for sectionmen, graders and extra gang workers. A shortage of experienced household workers was reported from the majority of the offices.

In Alberta there was a steadily increasing demand for farm help throughout the province. Placements of section labourers and extra gang men were numerous. While little construction was under way, few building tradesmen were reported as unemployed. In the northern part of the province some bushmen and mill hands were required. There was a fair response to the continued demand for maids and housekeepers for farm and city work.

In British Columbia a good demand for general farm labour was reported. Although building tradesmen were actively engaged, the requests for labour in this group were not many. A decline was recorded in the calls for casual workers, while railway maintenance and construction was not so brisk as formerly reported. Swampers, loggers and sawyers, were in great demand for the lumber camps, while sawmills were active. Quartz miners

were hard to secure but few calls for workers in other branches of the mining industry were received. Continued requests for domestic help and hotel and restaurant workers were reported, with comparatively few experienced applicants available.

#### EMPLOYERS' REPORTS.

According to reports tabulated by the Dominion Bureau of Statistics, there was a further increase in the employment afforded by employers of labour early in July, the improvement being confined largely to the construction and transportation industries. All provinces shared in the upward movement to some extent; the gains in the maritime and prairie provinces were the most extensive, those in Quebec and British Columbia were fairly large, while in Ontario the increase was comparatively small. Firms in Montreal, Ottawa, Winnipeg and Vancouver reported greater activity, but in Toronto and Hamilton curtailment of staff was indicated. The largest increases in Montreal occurred in construction; moderate improvement was recorded in leather, tobacco and glass factories, but the expansion in these manufactures was counteracted by reductions in garment, cotton, railway car, paper box and printing plants. In Toronto, general slackness in manufacturing affected the situation adversely and the construction industries showed very little improvement. Pulp and paper mills in Ottawa registered contractions which, however, were insufficient to offset increases in employment in construction and trade. Seasonal dullness in cotton and other textile mills in Hamilton accounted for most of the rather large decline in employment in that city, but activity in iron and steel also declined. The changes in Winnipeg were slight, there being general improvement in a number of industries, notably in brick and structural iron factories. Sugar refining, street railway and harbour work caused the bulk of the expansion in

Vancouver, but there were smaller increases in a number of industries. Manufacturing as a whole showed a net increase, considerable fluctuations in different groups giving this result. Saw and lumber mills, fruit, vegetable and fish canneries, biscuit, sugar, paper, tobacco, brick, electric current and petroleum factories were a good deal busier. On the other hand, textile, iron, steel, rubber, chemical and musical instrument works were slacker, the reductions in staff being due in some instances to temporary shutdowns for holidays and inventories and in other cases to seasonal inactivity. Seasonal slackness affected employment in logging appreciably; minor declines were recorded in the shipping and stevedoring group. The construction industries, as mentioned before, showed marked expansion, and seasonal gains were registered in transportation. Improvement was also indicated in the service, trade and communication groups. Practically all industries afforded more employment than during the corresponding period of last year and of 1921.

An article elsewhere in this issue gives in some detail the employment situation at the beginning of July.

TRADE                      A further decrease in  
UNION                      the volume of unem-  
REPORTS.                  ployment was shown

by reports received from trade unions at the end of June. Returns were tabulated from 1,449 labour organizations with a combined membership of 155,056 persons, 5,299 of whom were out of work. This represents a percentage of 3.4 in unemployment and compares favourably with percentages of 4.5 at the end of May and with 5.3 at the close of June, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not consider-

ed as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.) Quebec, Saskatchewan and Alberta registered improvement over the previous month, the gain in Quebec being particularly noteworthy due to increased employment for garment workers in Montreal. In Nova Scotia, Ontario, Manitoba and British Columbia the situation was slightly less favourable and in New Brunswick the same level of employment was maintained. In comparison with the returns for the end of June, 1922, more work was afforded in all provinces with the exception of Quebec. In the manufacturing industries, where returns were tabulated from 399 unions with an aggregate membership of 48,969 persons, the percentage of unemployment stood at 5.4 at the end of June as compared with percentages of 9.2 on May 31, 1923, and 6.5 at the close of June, 1922. Garment, furniture, leather workers and metal polishers were busier and bakers and confectioners also showed more activity. Cigar and tobacco workers were slightly less fully engaged, as were also workers in the printing and publishing trades. Less favourable conditions prevailed among iron and steel workers due, for the most part, to lessened activity for carmen, though machinists and patternmakers also reported small increases in unemployment; blacksmiths, boilermakers, moulders and sheet metal workers, however, were more fully engaged. More unemployment was shown in the Nova Scotia coal fields than at the end of May but in Alberta improvement was registered. In British Columbia mines, where no unemployment was reported in May, considerable unemployment was registered. In the building and construction group 186 unions with a membership of 15,048 persons reported slightly less unemployment,

the percentage out of work standing at 3.1 at the end of June as compared with 4.3 per cent at the close of May. Bricklayers, masons and plasterers, and carpenters and joiners were more fully employed and granite and stone cutters also reported considerable improvement. Steam shovel and dredgemen, bridge and structural iron workers and tile layers, lathers and roofers reported no idle members. Painters, decorators and paperhangers and hod carriers and building labourers reported small percentages of unemployment as compared with no unemployment in May. Plumbers and steamfitters and electrical workers were not so fully engaged as in the previous month. A nominal change only was reported by transportation workers, the percentage out of work at the end of June being 2.1 as compared with a percentage of 2.0 in May. Workers in the shipping and stevedoring division of the group and steam railway workers reported improvement over the previous month but street railway employees were not so active. In the steam railway division, where returns were tabulated from 520 unions with a membership of 42,773 persons, conductors and maintenance of way employees reported the same percentage of unemployment—as in May. Express employees were fully engaged and improvement was registered among the other railway workers. Employment among transportation workers was on a higher level than in June of last year. Fishermen reported no unemployment and lumber workers and loggers were more active than in May. A very slight increase in employment was reported by retail clerks. The situation was not quite so favourable as in May among hotel and restaurant employees, theatre and stage employees and stationary engineers and firemen, but barbers showed more activity.

A summary of employment during the quarter ending June 30, 1923, as

reported by trade unions, appears elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS.** During the month of June, 1923, the offices of the Employment Service of Canada made 36,426 references to positions and effected a total of 35,073 placements. The placements in regular employment numbered 23,524 of men and 3,283 of women (a total of 26,807), while placements in casual work totalled 8,266. Vacancies reported to the offices numbered 41,067, of which 30,602 were for men and 10,465 for women. The number of applications for work was 42,880, of which 32,695 were from men and 10,185 from women. The reports for the month indicate a decline in the business transacted as compared with the previous month, but a comparison with the same month a year ago shows employment on a slightly higher level.

**BUILDING PERMITS AND CONTRACTS AWARDED.** According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during June was lower than in the preceding month and also lower than in June, 1922. The estimated value of the permits issued during the month was \$14,345,573 as compared with \$18,766,065 in May and \$17,052,582 in June, 1922.

According to the *MacLean Building Review*, issued by the MacLean Building Reports, Limited, the value of the contracts awarded during July amounted to \$30,842,500 as compared with \$50,674,800 in June and \$26,694,200 in July of last year. There was, therefore a decrease of 39.1 per cent in the former and an increase of 15.5 in the latter comparison. Of the total for the month under review \$936,400 or 3.4 per cent was to be spent in the Maritime provinces, \$99,704,300 or 31.1 per cent in Quebec, \$15,436,500 or 50.1 per cent in Ontario and \$4,765,300 or 15.1 per cent in the western provinces.

# PRODUCTION REPORTS.

The Dominion Bureau of Statistics reports a slight decline in the production of pig iron in June as compared with the previous month, the gross tonnage being 99,239 for June and 101,533 for May. The production in June, 1922, was 28,763 tons only, and in the corresponding month of 1921 the output was 54,812 tons. The output in June was greater than the monthly average of 1918 when the highest annual record of recent years, was established. During May and June foundry iron produced for sale increased from 23,242 tons to 28,144 tons while the basic iron intended for further use of the producing firms declined from 61,714 tons to 55,565 tons. The total production of pig iron for the six months ending June, 1923, was 435,146 tons. Seven furnaces were in operation at the end of June, three at Sydney having been banked. Those in blast on June 30 were; two at Hamilton, one at Port Colborne and four at Sault Ste. Marie. The production of ferro-alloys declined slightly from 2,287 tons in May to 2,185 tons in June. The whole quantity in either case was ferro-silicon produced in electric furnaces for sale.

The production of steel in June was 96,167 tons as compared with 104,079 tons in May. The output during June was, however, about three times greater than that of the corresponding month in 1922 and was also greater than the output of any month during the first half of 1923 except May. The cumulative production for the half year ending June 30 was 476,430 tons as compared with an output of 177,080 tons in the corresponding period of 1922, and a production during the first six months of 1921 of 295,140 tons. Open hearth basic ingots produced in the first six months of 1923 amounted to 453,726 tons as contrasted with 167,622 tons for the same period in 1922. The direct steel castings increased from 9,321 tons to 22,704 tons in the six months period ending June 30. Considerable expansion was recorded in

the production of openhearth basic castings, while electric castings declined slightly. No acid open-hearth castings were produced in the first half of 1922, while 1,855 tons was reported for the corresponding period of 1923.

A report from the Department's correspondent at Cobalt states that nine cars of silver ore were shipped during June from the Cobalt camp, containing approximately 689,880 pounds of ore, as compared with ten cars containing 720,137 pounds in the previous month. The Nipissing Mine shipped 132 bars containing 151,882.26 ounces of silver, and The Mining Corporation of Canada shipped 107 bars containing 107,913.22 ounces of silver, making a total of 239 bars containing 259,795.48 ounces for the month of June. The May shipment was 524 bars containing 560,080.20 ounces of silver.

A report from the British Columbia Forestry Branch shows that 281,850,210 feet board measure of timber was scaled in the province during June. The total includes Douglas fir, 131,515,193 feet; red cedar, 66,206,280 feet; spruce, 22,694,121 feet; hemlock, 36,202,873 feet; balsam, 5,259,261 feet; yellow pine, 6,827,241 feet; white pine, 3,732,632 feet; jack pine, 5,523,469 feet; larch, 3,471,047 feet; cotton wood, 392,293 feet; and other species 25,795 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$22,609,252 in June as compared with \$20,968,000 in May. The gross earnings for the first six months of 1923 amounted to \$116,556,160.

The gross earnings of the Canadian Pacific Railway for June were given in a preliminary statement as \$14,943,918 in comparison with \$13,810,448 in the previous year; and for the six months ending June 30, 1923, as \$80,845,493 as compared with \$76,295,359 for the same period in 1922.

### Strikes

The time loss due to industrial disputes reported to the Department during July was greater than during either June, 1923, or July, 1922. There were in existence at some time or other during the month 21 disputes, involving 17,104 employees and a time loss of 310,608 working days, as compared with 25 strikes in June, involving 6,908 employees and a time loss of 55,609 working days. In July, 1922, there were recorded 21 disputes involving 15,553 employees with an estimated time loss of 255,734 working days. At the beginning of July there were on record 16 disputes involving 2,821 employees. Five new disputes commenced during July, involving 14,283 employees with a time loss of 245,083 working days. One of the strikes commencing prior to July and four of those commencing during July terminated during the month. At the end of the month, therefore, there were 16 disputes involving 2,821 employees.

### Prices

The budget in terms of retail prices of foods again declined slightly owing chiefly to seasonal declines in the prices of cheese, butter and eggs. The average cost of a list of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.17 at the beginning of July as compared with \$10.23 for June; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920 (the peak); and \$7.42 for July, 1914. Cooking eggs and dairy butter showed the largest declines, though cheese, flour, bread, creamery butter and lard were also lower. The principal advances occurred in potatoes and beef while evaporated apples and granulated sugar showed smaller advances. The total budget including food, fuel and rent averaged \$20.65 for July as compared with \$20.72 for June; \$20.67 for July, 1922;

\$21.53 for July, 1921; \$26.92 for July, 1920, (the peak); and \$14.17 for July, 1914. Fuel and rent were practically unchanged.

The index number of wholesale prices in Canada prepared by the Dominion Bureau of Statistics showed a slight decline in July as compared with June. Basing the index on the average prices in 1913 the average wholesale prices in July were 153.6 as compared with 155.1 in June and 100 in 1913. The decrease in prices was pretty general, being noticeable in six of the eight groups of commodities upon which the bureau received reports. The two groups in which prices rose were non-metallic minerals and chemical products. Consumers' goods as a whole were practically stationary, while producers' goods, or materials used in manufactures, showed a decline. The index for food, beverages and tobacco fell six points from June to July. There was a slight fall, also, in building and construction materials.

The index number based upon prices of 271 articles in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 224.7 for July as compared with 226.1 for June; 225.3 for July, 1922; 238.6 for July, 1921; 356.6 for May, 1923, (the peak); and 134.6 for July, 1914. The most important declines occurred in grains, livestock, wool, cotton, raw silk, jutes and hessians, horsehides, sole leather, pig iron, steel billets, oak, linseed oil, turpentine and non-ferrous metals. The principal advances were in corn, hay, cheese, eggs, milk, fresh fish and onions, and coil chain.

The index number calculated by the Canadian Bank of Commerce, based on prices 1909 to 1913 as 100, was only slightly changed; that for exports rose from 153.78 for June to 154.77 for July; which the number for imports was down from 167.53 for June to 166.57 for July. The combined index of imports and

exports was 160.65 for June and 160.67 for July. Professor Michell's index number of forty articles, twenty foods and twenty manufacturers' goods based on

prices 1900 to 1909 as 100, fell from 177.2 for June to 176.4 for July. Both foods and manufacturers' goods declined.

### CANADIAN IMPORTS AND EXPORTS DURING JUNE, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of June, 1922 and 1923 and for the three months ending in June of these years, and the exports, domestic

and foreign, of similar classes of goods for the same periods.

The following table shows the imports, free and dutiable, and the exports, domestic and foreign, of the various classes of products, for the month of June, 1923.

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
	\$	\$	\$	\$
Agricultural and vegetable products, mainly foods	2,984,410	10,997,034	38,370,876	65,161
Agricultural and vegetable products, other than foods	2,078,701	3,072,430	2,587,064	256,755
Animal and animal products.....	2,283,941	1,968,625	10,386,116	61,386
Fibres, textiles and textile products.....	4,814,313	8,824,119	,880	164,531
Wood, wood products and paper.....	1,727,120	2,050,635	25,146,150	60,121
Iron and its products.....	2,431,043	15,039,074	5,969,868	231,411
Non-ferrous metals and their products.....	1,113,080	2,627,157	4,802,437	38,288
Non-metallic minerals and products.....	8,623,876	7,132,478	2,748,280	19,491
Chemicals and allied products.....	972,881	1,421,846	1,364,334	10,185
Miscellaneous commodities.....	2,061,651	2,390,210	1,569,892	420,726
Totals .....	29,091,016	55,541,608	93,750,837	1,337,055

In June, 1923, the duty collected amounted to \$11,927,748 as compared with \$11,589,033 in June, 1922.

The following comparative table shows the values of merchandise enter-

ed for consumption and the merchandise, domestic and foreign, exported in the months of June, 1922 and 1923, and in the three months ending June of these years respectively:

	Month of June		Three months ending June	
	1922	1923	1922	1923
	\$	\$	\$	\$
Merchandise entered for consumption.....	61,668,729	84,632,624	175,485,557	237,079,210
Merchandise, domestic, exported.....	71,760,563	93,750,837	172,824,334	222,207,642
Total .....	133,429,292	178,383,461	348,309,701	459,286,852
Merchandise, foreign, exported.....	1,346,492	1,337,055	3,393,582	3,257,586
Grand total, Canadian trade.....	134,775,784	179,720,516	351,703,283	462,544,438

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JULY, 1923

**D**URING the month of July the Department received reports of two Boards of Conciliation and Investigation appointed to deal with disputes between (1) the Canadian National Railways, Western Lines, and their dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees, and (2) the Canadian National Telegraphs and its employees being members of Canadian National Telegraphs System Division No. 43, Commercial Telegraphers' Union of America.

### Applications Received

During the month three applications for the establishment of Boards of Conciliation and Investigation were received as follows:

(1) From employees of the Algoma Steel Corporation, Limited, being engineers, firemen, conductors and brakemen, members of the Brotherhood of Locomotive Firemen and Engineers and Brotherhood of Railroad Trainmen. A Board was established and the following members were appointed, Mr. J. G. O'Donoghue, K.C., Toronto, chairman, appointed on the joint recommendation of the other two members of the Board, Mr. F. H. McGuigan, Toronto, appointed by the Minister in the absence of a recommendation from the employer, and Hon. Senator G. D. Robertson, Ottawa, nominee of the employees.

(2) From employees of Montreal Light, Heat and Power Consolidated, being members of various unions employed in the production and distribution of electricity and gas. A Board was established and the following members were appointed: Mr. F. W. Stewart, Montreal, chairman, appointed on the joint recommendation of the other two members of the Board, Messrs. Bernard Rose, Montreal, and John T. Foster, nominees of the employer and employees respectively.

(3) From certain employees of the Canadian Pacific Railway Company being checkers, truckers, coopers, etc., employed on the Montreal wharf, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. After the application had been received negotiations were resumed through the mediation of a representative of the Department of Labour. An agreement was reached and the application for a Board was withdrawn by the employees.

### Other Proceedings Under the Act

In the case of the dispute between the Hollinger Consolidated Gold Mines, Timmins, Ont., the McIntyre Porcupine Gold Mines, Schumacher, Ont., and the Dome Mines, Limited, South Porcupine, Ont., and certain of their employees, members of Porcupine Mine Workers' Union, a Board was completed by the appointment of Mr. E. McG. Quirk, Montreal, chairman, and Mr. Balmer Neilly, Toronto, nominee of the employers; Mr. Thomas Ryan, nominee of the workers had been appointed in June. The chairman was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board.

In the case of a dispute between the Toronto Electric Commissioners and certain of their employees, being linemen, groundmen, and others concerned in the work of power transmission and distribution, members of the Canadian Electrical Trades Union, Toronto Branch, a Board was established and the following members were appointed. His Honour Judge Colin G. Snider, Hamilton, Ont., chairman, appointed on the joint recommendation of the other two members of the Board, Messrs. F. H. McGuigan, Toronto, appointed by the Minister in the absence of a recommendation from the employers, and J.

G. O'Donoghue, K.C., Toronto, nominee of the men.

**Ottawa Electric Railway Company and  
Certain of its Employees**

In the case of the dispute between the Ottawa Electric Railway Company and certain of its employees being members of Division No. 685, Amalgamated As-

sociation of Street and Electric Railway Employees of America, upon which a Board reported in May (see LABOUR GAZETTE for June, page 597), the recommendations of the Board were not accepted, but a settlement was reached early in July by direct negotiations between representatives of the Company and the men.

**Report of Board in Dispute between the Canadian National Railways  
(Western Lines) and Dining and Sleeping Car Employees**

A report was received from the Board established to deal with a dispute between the Canadian National Railways (Western Lines) and their dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees. The Board was composed of Mr. W. J. Donovan, Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board Messrs. C. E. Dafoe, Winnipeg, and David Campbell, Winnipeg, nominees of the employers and men respectively.

The report contained recommendations for the settlement of the dispute. Minority reports dealing with certain items in the report of this Board were also received from Messrs. C. E. Dafoe and D. Campbell.

The text of the reports is as follows:

**Report of Board**

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian National Railways (Western Lines), Employer, and their dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees.

To the Honourable  
James Murdock,  
Minister of Labour.

On the 31st of March, 1923, a Board of Conciliation and Investigation was appointed in the above matter, consisting of Charles E. Dafoe, General Superintendent of the Midland Railway, of

Winnipeg, Manitoba, nominated by the company; David Campbell, Barrister, of Regina, Sask., nominated by the employees, and William J. Donovan, Barrister, of Winnipeg, Manitoba, appointed by the Minister as chairman of the Board.

The Board held meetings on the following dates:— May 30, June 27, 28, 29, July 4, 5, 6, 7, 9, 10, 11 and 12, A.D. 1923.

At these meetings were present: representing the company, J. M. Grieve, General Superintendent, James Gorman, Superintendent, and A. C. Egan, Regional Comptroller; representing the employees, Robert Dykes of Winnipeg in Manitoba, General Chairman, and C. H. Minchin of Calgary in Alberta, General Secretary of the Canadian Brotherhood of Railroad Employees, John A. Robinson, Local Chairman of the Grievance Committee, all of the Canadian Brotherhood of Railroad Employees.

Pursuant to the form of application for Board made by the employees, we took each item of dispute and received such evidence in connection therewith as was tendered by both the employer and employees.

The Board made a request to the parties to endeavour to come to an arrangement in connection with one or more of the items in dispute (which they endeavoured to do in a meeting without the Board on the 30th ultimo), but the answer to the Board was that

they were unable to agree, and the parties requested a Board decision.

Therefore, after hearing the evidence and examining the many exhibits filed, the Board begs to submit herewith itemized findings on each of the respective claims.

In respect of Item 2, a minority report has been filed by Mr. Dafoe, and a copy of which is attached hereto, and in respect of Items 3 and 4, Mr. Campbell, representing the employees, dissented from the views and recommendation of the Board, and is making his own report to be attached hereto.

In respect of Item 5, the Board, pursuant to your telegram of the 11th instant, took the question under consideration as to whether the cause of dismissal herein involved matters outside the jurisdiction of the Board, and decided that they should not decide on this cause of complaint and should consider it as withdrawn.

All of which is respectfully submitted. Dated at the City of Winnipeg in Manitoba, this 12th day of July, A.D. 1923.

(Sgd.) W. J. DONOVAN,  
Chairman,  
(Sgd.) C. E. DAFOE,  
Member,  
(Sgd.) D. CAMPBELL,  
Member.

#### CLAIM No. 1

"Porters on G.T.P. Sleeping Cars claim for unpaid wages May 1st to October 1st, 1920, as per schedule Agreement".

The claim is advanced on behalf of the porters in question that after the schedule was arranged, and without the matter being discussed during negotiations, or included in the schedule agreement, the Railway Company arbitrarily deducted for the period May 1st, 1920, to October 1st, 1920, \$10.00 per month per man to offset free meals donated by the Company during said period.

It was contended on behalf of the Railway Company in reply that they

were justified in doing this, because up to the time the schedule (Exhibit 7) was arranged in October, 1920, the G.T.P. porters did not have any schedule; porters on the Canadian Northern Railway had been given no free meals during the period; if the rate of wages to the G. T. P. sleeping car porters were increased to the same rate as was paid to the C. N. R. porters, that, by reason of the fact that the C. N. R. porters did not get free meals, there would be discrimination against the C. N. R. porters in favour of the G. T. P. porters.

It was admitted by the representatives of the Railway Company that the meals in question were furnished gratuitously, and mainly for the reason that it would save the time to the Railway Company that would be lost in the porters leaving their cars at various stations to get meals, and if the meals were furnished by the Railway Company, the men would be in better physical condition, and as a consequence would render better service.

It was contended on behalf of the porters that the deduction of \$10.00 per month was made without negotiation with them, and arbitrarily by the Company, and after the schedule had been agreed upon, and they further pointed out that following the adoption of the schedule, the Company continued to advance free meals.

It was further contended on behalf of the employees that by letter appended to schedule rules and rates of pay governing the service of parlor car porters effective October 1st, 1920, rates of pay became retroactive to May, 1920, and the meals being provided free was a custom, and, therefore, a working condition, and hence there was no authority for the Company to arbitrarily take a step which in effect reduced the increased wages.

The Board is of the opinion that the Company was not justified in making the deduction in question, and recommends that same be restored.

## CLAIM No. 2

"Tourist Car Porters on Canadian National Cars for unpaid wages as per McAdoo award for a period of over eight months."

This period of eight months was defined as being from August 1st, 1918, to May 26th, 1919.

Vide Exhibits 3 (Argument by employees), 34 (Reply argument by Company), and exhibits 32, 35, 36, 37, 38 and correspondence file marked 39.

If the McAdoo award sup. 17, (Exhibit 37 hereto) applied to the Tourist Car Porters in question, then the rate of wages payable would for the period August 1, 1918, to May 26th, 1919, be as follows:—

*Tourist car porters:*

Aug. 1, 1918, to Dec. 31, 1918 \$60.00 per month  
Jan. 1, 1919, to May 26, 1919 \$65.00 per month.

The Company contends that agreement dated November 1st, 1918, (Exhibit 36 hereto) was effective from August 1st, 1918, to November 1st, 1918.

The employees give evidence that this agreement was not executed by the chairman of the committee for the men (he having definitely refused to sign) and was only signed by two members of the committee in their individual capacity, and furthermore, they contend that the Company did not adhere to its terms.

From the evidence submitted, it does not appear that the agreement (Exhibit 36) was accepted by the men.

In the opinion of the Board, the Tourist Car Porters in question are entitled to unpaid wages as per the McAdoo award for the period August 1st, 1918, to May 26th, 1919.

Mr. Dafoe dissents from the finding in Claim No. 2 by the majority of the Board, and attaches hereto his minority report thereon.

## CLAIM No. 3

"Restoration of Seniority with payment of wages pursuant thereto, as per schedule agreement for former strikers".

It was admitted by the claimants herein that this claim refers only to payment of wages, and that otherwise seniority has been restored to the satisfaction of the employees.

The claim applies to porters in the employ of the Canadian National Railway and Grand Trunk Pacific lines (Western Lines) who went on strike in or about the latter part of the month of May, 1919.

It was contended by the Company that at the time the schedule was arranged in or about November, 1920, and set out in schedule, the restoration of seniority was not agreed upon.

The Company further contended that the letter appended to original schedule agreed upon on or about the above date supports their contention that the restoration of seniority was retained by the Company to be granted as a matter of grace, and subject to the approval of the Company, and they refer to letter attached to original schedule marked Exhibit 15 hereto.

It was further contended by the Company that their willingness to assist in determining seniority as between the men as a matter of justice should not be used against them in having to resist a further claim for payment of wages.

It appears from the evidence that on or about the First day of March, 1921, the question of seniority for the purpose of run assignment was finally determined to the satisfaction of the employees, showing the seniority which was then agreed upon.

It was admitted by the employees that they lost out in the strike in the year 1919, and that they had no schedule in existence up to the time the schedule was arranged in October, 1920, and in the period from the date of the strike, and up to October, 1920, former strikers were only employed as new men.

It is the opinion of the Board that the evidence does not show that there

was any agreement for the "Restoration of Seniority with payment of wages" as claimed, and that therefore this claim is not substantiated.

Mr. Campbell, representing the employees, dissents from the views and recommendation of the Board on this item, and is making his own report herein.

#### CLAIM No. 4

"Rates and unpaid wages for porters in charge of Buffet Parlor Cars as per schedule".

In brief, it was contended on behalf of the Company that the porter in question performed primarily the duties of Buffet Sleeping Car Porter.

It appeared from the evidence, (and was admitted by representatives of both parties to the dispute), as a fact that the porter in question performed some of the duties usually assigned to a Buffet Sleeping Car Porter, and also of a Buffet Parlor Car steward waiter, and on the other hand, some of the duties and work usually performed by a cook and steward waiter in a Buffet Parlor Car.

According to the contention of the employees, the rate of wages should have been \$115.00 per month, because that is the rate of wages paid to cooks and steward waiters in buffet parlor cars, and according to the Company the rate should only be \$97.50, this being the rate paid to Buffet sleeping car porters.

The Board is of the opinion that the schedules in existence do not clearly or adequately define the wages to be paid in such a case.

The Board is of the opinion that under the circumstances of this particular case, an average rate of between the classes mentioned would be a fair remuneration, and would therefore recommend that the claimant's salary be at the rate of \$106.25 per month to date from June, 1920, with a deduction therefrom of \$24.40, being the amount of back pay paid to date by the Company.

Mr Campbell, representing the employees, dissents from the views and re-

commendation of the Board on this item, and is making his own report therein.

#### CLAIM No. 5

"Wrongful dismissal of Sleeping Car Porter Echols (W. H.)"

As the evidence submitted and filed by the Company herein, (substantiated in part by statutory declaration), disclosed to the Board that the cause of dismissal involved matters constituting an indictable offence, and in the opinion of the Board, was a matter beyond the jurisdiction of the Board under section 2, Subsection "E" of the Act, the Board, pursuant to your telegram of the 11th instant leaving the decision as to whether or not the Board should deal with this cause of complaint open, have decided that they should consider this item as being withdrawn from consideration by the Board.

#### Minority Report with reference to Claim No. 2

I regret very much my inability to meet the views of the other members of the Board in their report upon Claim 2 entitled "Unpaid Wages for Tourist Car Porters".

My disagreement is based upon the conviction that the so-called McAdoo award did not legally or automatically become effective upon Canadian Railways. They were, however, in good faith generally applied or used as a basis of negotiation.

In the finding of the majority members of the Board, they have considered of no effect a document under the caption "Memorandum of Agreement made this first day of November, 1918", which was presented in evidence and marked Exhibit 36. In this document the Company made no attempt to ignore the application of General Order 27, but instead of applying a general rate of \$60.00 per month, as literally provided, a scale furnishing the following rates was applied:—

1st year's service.....	\$55.00
2 to 5 years' service.....	60.00
5 years and over.....	65.00
effective August 1, 1918,	

ostensibly for the purpose of affording greater compensation to the older employees, and as a result of this concession, an increase occurred in Company's expenses.

According to the evidence, there were four members of the employees' committee present when this Agreement was drawn, and it actually shows the bona fide signatures of three as a committee of porters. The document is also signed by W. Pratt, Jr., the Company's General Superintendent. The Company testified that there was no coercion or intimidation used in the preparation or execution of this agreement, and I, therefore, do not consider it within the province of this Board to nullify it or its active operation.

I agree, however, that the terms of this agreement should have remained in effect until superseded by subsequent negotiation.

(Sgd.) C. E. DAFOE,  
Member.

#### Minority Report with reference to Claims Nos. 3 and 4

In the matter of the Industrial Disputes Investigation Act, 1907, and in the matter of the dispute between the Canadian National Railways (Western Lines) and its dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees.

With regard to Items numbered 3 and 4 of the employees' statement of matters in dispute I regret very much that I am unable to arrive at the findings and recommendations of the Chairman and Mr. Dafoe, and feel it my duty to express my views thereon.

Dealing first with Item No. 3, the difference of opinion between us is as to the construction to be placed upon

the agreement concluded between the officers of the Company and the employees' Committee on November 20, 1920. This agreement among other things provided that wages for sleeping and parlor car porters should be \$75, \$85 and \$95 for first, second and third year services respectively as from the 1st of May, 1920. This agreement was executed on November 20th, 1920, and, as before stated, was made retroactive to May 1st, 1920. Some time subsequent to May 1st, 1920, probably in August, the wages of these employees had been increased to \$75 per month as from May 1st, 1920, and remained at this rate up until the entering into of the above agreement. It will therefore be observed that the new rates became an important factor in computing the payment for wages upon the basis of the new wages as from May 1st.

It appeared that some of these employees had been in the employ of the Canadian Northern Railway and also of the Grand Trunk Pacific Railway Companies from the early days of the existence of these railways, and had participated in the strike which occurred in Winnipeg in May and June, 1919; mostly all of these men, however, had been re-employed from time to time at some date subsequent to the termination of the strike and prior to the negotiations above referred to.

The agreement entered into on the 20th November, 1920, as to reinstatement of these employees with regard to their seniority in service, became a very important factor in two respects: firstly, as to rate of pay which should apply to the men returned to the service, and secondly, as to their rights to preference in the exercise of seniority rights in making applications for the choice of runs, a condition then established for the first time by agreement. There is no dispute as to the effect of the agreement upon this second point. The men were reinstated as to their complete seniority standing and have exercised the privileges which would

accrue to them by reason of their seniority.

It also appeared that the negotiations which led up to the agreement of November 20th were commenced by the Employees' Committee in April, 1920, but the actual conference at which a settlement was arrived was held some time during the month of November. As above stated, during this period the wages of railway employees had been very materially increased by the United States Railway Wage Board, whose decisions were adopted and applied by all Canadian railways. The application of this decision would automatically increase the pay of those employees from \$75 to \$95 per month, and this without any special negotiations on their part, so that at the time the conference was proceeding between the parties in November the employees were entitled, as from May 1st, 1920, to a flat rate applicable to all of \$95 per month. As many of these employees had gone out on strike and had returned to work subsequent to June, 1919, it was highly important to both parties in fact as to whether or not they should be recorded as re-employed or reinstated and this must have been an important factor in the minds of both parties when considering the graded scale of wages which was ultimately agreed to.

As there is some conflict between the statements and representations of the representatives of the parties it seems to me the only way by which one can arrive at a correct conclusion is to view the whole matter in the light of the conduct of the parties respectively.

It seems difficult to conceive that either of the parties should regard an agreement as to reinstatement for one purpose only, and not for all purposes which clearly must have been in the minds of both parties at the time. Ordinarily one would consider that reinstatement would be regarded as embodying all that such a term na-

turally implied unless there was a clearly expressed agreement to the contrary. The Company contends that at the time there was no discussion of the effect of reinstatement upon the wages to be applied according to the graded scale, but the absence of such discussion can only raise the presumption of a matter so manifestly important to both parties as having been accepted without debate. The Company admits that the men were reinstated and their seniority arranged accordingly.

The employees contend that they would never have accepted a graded scale of \$75, \$85 and \$95 per month if they were not receiving along with that a valuable consideration such as the reinstatement of the men in question. It is difficult to believe otherwise when one realizes, as already stated above, that at that time they were all aware of the fact that these very employees were entitled to a flat wage of \$95 per month without any negotiation or representation of any kind.

I am, therefore, driven to the conclusion that the onus was on the Company to show in some clearly expressed form that there was to be an exception as to the reinstatement of these employees which would deprive them of part of what that term involved in applying the new graded scale of wages. This onus was never discharged by the Company and in fact no attempt was made to do so, but the Company chose rather to rely upon the absence in the agreement of a confirmatory specification of the applicability of seniority to these rights.

Further light upon the acceptance of the graded scale and the interpretation of the agreement is shown by the conduct of the parties from the events which followed the making of the agreement of November 20th. In commencing to pay the wages applicable to the back time as from May 1st, the first pay day came about December 20th, and thereupon the employees

realized that the reinstatement of the men had not been carried out with regard to the payment of their wages provided by the new scale. Their Chairman immediately conferred with the Company's Superintendent at Winnipeg, but was referred by him to the authorities at Toronto. In a letter dated 27th December, 1920, written by Mr. Robinson, the Chairman of the Employees' Committee, to Mr. Grieve, the General Superintendent of the Company, and filed as Exhibit No. 12 with the Board, the whole matter is reviewed and a definite claim is made to the full terms of the agreement as to reinstatement, and it is pointed out that this was the basis of the Committee's acceptance of the reduced rates and the graded scale. It is indeed significant that Mr. Grieve in his reply dated January 11, 1921, filed as Exhibit No. 13 with the Board, is entirely evasive of these crucial points in issue and in no respect suggests the slightest denial of the clearly expressed statements in Robinson's letter. Indeed Mr. Grieve in his letter of May 30th, 1921, upon the same subject, does not deny the reinstatement of the strikers, but declares (for the first time) that during the negotiations of November, 1920, the question as to "the date effective" of the restoration of full seniority rights was not discussed.

I am at a loss to contemplate how seniority could be restored at all and at the same time raise any question as to "the date effective". If the restoration of seniority rights would be effective for a certain purpose only, then there should have been a specified limitation accordingly, particularly so in view of the all important question which must have been in the minds of the parties at the time. It is also difficult to conceive that it should be regarded in this limited sense and then immediately upon the employees' finding after the first pay day that it was so regarded by the Company that they should find cause for immediate com-

plaint and that that complaint should be persistently pursued by them up to the present date and that the Company should rely on so slender a defence, and until a very late date entirely evade the real question in issue.

I therefore find that the employees' claim in this item is fully established and recommend that they be paid accordingly. I venture to add that such attempts to evade the clear terms of agreements made between employers and employees and entered into in good faith can only lead to an absence of that mutual confidence and good-will which should ever exist between parties to such agreements, and in fact tends to the disregard for agreements which should always be regarded as inviolate.

With respect to the dispute contained in Item No. 4, my colleagues have recognized that the employee in question was engaged in buffet-parlor car service on the particular train in question between Saskatoon and Prince Albert but was not paid in accordance with the schedule for buffet-parlor car employees. And while it has also to be observed that there was no specific rate for one performing the multifarious duties of this employee, it should be found more advisable to try to guess at the rate by a process of averages, rather than to accept the rate fixed by agreement between the parties for this class of service. Personally, I feel quite incompetent to do this, especially in view of the fact that the question of the merite necessary to the fixing of the wage, or rather for the fixing of a new scale of wages, was not discussed by the parties nor was any evidence tendered in that regard.

It is admitted by all parties that the particular car in question was a buffet-sleeping car (undoubtedly used because no buffet-parlor car was available). It was also admitted by all parties that the person in charge of the car performed the duties involved in buffet-

parlor car service. This would entail the sale of parlor car space, collection and accounting for transportation, management of the car from the standpoint of the steward, waiting on table as a waiter, cooking and preparing the menu as a chef, and the general care of the car. These multifarious duties were all performed by the one man in question and the employees claimed the rate for him which is presented by the schedule agreement for a buffet-parlor car steward-waiter. This rate is \$115 per month and is for the services of a person acting as both steward and waiter. The Company contended that the particular claimant came under the schedule for sleeping and parlor car porters and not the schedule for dining-cafe combination buffet and parlor car employees, but the Company admitted the class of service performed and declared that, the particular car in use being a buffet-sleeping car, the rate of a buffet-parlor car should not be applied and that if such rate were applied they would have put a white man in charge. It is to be noted that the evidence disclosed that during the entire period of service involved in the dispute that the car in question had never in any instance, or in any respect whatever, been used as a sleeping car, but purely for the purpose of a buffet-parlor car.

If the Board were to fix wage for this particular service by combining

the wages for employees whose duties, or some of whose duties, the claimant performed and then struck an average, it could only be fairly done by combining the wages of all employees whose duties he performed. The schedule agreement for dining-cafe combination and buffet-parlor car employees provides the following rates:

“Combination cafe and sleeping car stewards \$160.00; chiefs \$150.00; all waiters \$90.00; all pantry men \$80.00; sleeping car conductors first year \$160.00; steward-waiters \$115.00; cooks \$115.00.”

Clearly he performed a combination of all the duties of these employees in a greater or less degree and the average of these wages would amount to \$124.25 per month.

Both parties admit that employees doing the same class of work as this dispute embodies are styled and paid as steward-waiters at \$115.00 per month. The young man in question was admittedly competent and well qualified for the work and to reduce him below the rate paid to a white man doing similar work does not seem to me to be in keeping with sound principles. I therefore find that the employees' claim is well founded and recommend that the claimant should be paid at least at the rate of \$115.00 per month.

(Sgd.) D. CAMPBELL.

### **Report of Board in dispute between the Canadian National Telegraphs and certain of its employees being Commercial Telegraphers**

A report was received from a Board established to deal with a dispute between the Canadian National Telegraphs and its employees engaged in the commercial telegraph service, Members of Canadian National Telegraphs System, Division No. 43, Commercial Telegraphers' Union of America. The Board was composed of Mr. F. H. McGuigan, Toronto, chairman,

appointed on the joint recommendation of the other two members of the Board, Messrs. F. H. Markey, K. C., Montreal, and David Campbell, Winnipeg, nominees of the employer and men respectively. The report was unanimous and was accompanied by the copy of an agreement that had been signed by both parties.

The text of the report is as follows:

## Report of Board

Montreal, July 24, 1923.

To The Honourable James Murdock,  
Minister of Labour,  
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act, 1907, and the dispute between the Canadian National Telegraphs and its employees, members of the Commercial Telegraphers' Union of America.

Dear Sir,

The Board of Conciliation established by you on the 29th day of May, 1923, to inquire into the above matter, respectfully report as follows:

Meetings of the Board were held at the Mount Royal Hotel, Montreal, from July 16th to the 24th, at which the company was represented by Mr. Geo. D. Perry, General Manager, and Mr. C. E. Davies, General Traffic Superintendent, and the employees by Messrs. P. F. Schnur, Deputy President for Canada, E. J. Young, T. Taylor and R. I. Bradley, of the General Committee.

The contentions of the employees were earnestly and vigourously presented by the Deputy President and the several members of the Committee, and the company's position quite as explicitly and emphatically set forth by Messrs. Perry and Davies.

The most difficult problem presented to the Board for solution was an alleged difference in rates of pay as compared with Canadian Pacific rates for life service throughout the Dominion.

After prolonged and patient hearings, the Board realized that the contending parties were themselves best acquainted with the conditions surrounding the issues involved, and that the most satisfactory agreement.

This view was finally accepted, negotiations resumed, and after several

days (the Board assisting from time to time) an agreement was arrived at and this day duly executed by the representatives of both parties, copy of which is herewith enclosed.

(Sgd.) F. H. MCGUIGAN,  
Chairman,  
FRED. H. MARKEY,  
Company's Representative,  
D. CAMPBELL,  
Employees' Representative.

## TELEGRAPHERS' RULES

The following rules shall govern the telegraphers employed by the Canadian National Telegraphs.

## ARTICLE I.

1. Employees assigned to commercial telegraph service whether operated by Morse system, telephone or automatic device of any character, or who are required to devote any portion of their time to the transmission or receiving of telegraph matter by any device whatsoever, will be considered commercial telegraphers within the meaning of this schedule.

This does not apply to the following:—All Traffic Managers; Assistant Traffic Managers at Montreal, Toronto and Winnipeg; All Early Night Traffic Managers; All Late Night Traffic Managers.

2. In the event of a Morse telegrapher being required by the Company to operate any automatic device, he shall not suffer any loss of rating during the time he is so employed.

3. When additional telegraph positions are created, compensation will be fixed in conformity with that for positions of the same class as shown in this schedule.

## ARTICLE II.

1. Right of promotion will be governed by seniority where ability is equal and sufficient. Such right of promotion at non-functional offices will extend over the offices in the district which are under the jurisdiction of the District Superintendent.

2. Vacancies will be filled by the appointment of the senior competent telegrapher who makes application, the Company to be the judge of qualifications: the Company to bulletin locally all vacancies in special positions occupied by Morse telegraphers as such. Also vacancies in supervisory or like positions which are covered by these rules. Full information will be given on request regarding vacancies. Special positions are those held

by telegraphers in newspaper offices Grain Exchanges and Stock Exchanges.

3. Vacancies created through leave of absence for periods exceeding fifteen days will be filled during such leave of absence according to these rules.

4. A telegrapher employed will, after thirty days' continuous satisfactory service, be considered a regular employee.

5. A list showing the seniority and salary of telegraphers employed at each office will be posted on the bulletin board and revised monthly, within ten days from the first day of each month.

#### ARTICLE III.

1. In event of staff reduction, the junior telegrapher shall be dispensed with first.

This rule shall apply to employees within their own department, excepting where an employee is qualified and competent to operate apparatus of another department. In such case the seniority shall extend to Morse, Telephone and Automatic Departments, and an employee may bid in a position held by a junior. This exception will also apply to city branch offices which are operated by Morse, Telephone or any automatic device at the office affected.

The Company will, where practicable, provide and extend facilities so that employees may qualify themselves to fill vacancies.

2. Any telegrapher in good standing whose services have been dispensed with on account of reduction of force, will be given a certificate and preference in filling new positions or vacancies.

#### ARTICLE IV.

1. Telegraphers declining promotion do not forfeit any rights to the same or any other position they may be entitled to when a vacancy occurs, but will rank junior to the telegrapher receiving promotion.

2. A telegrapher absent on leave when a vacancy occurs to which he is entitled, will not be prevented on return within thirty days, from claiming the position.

3. If a telegrapher be granted leave of absence by the Company for a period of three months or less (in any twelve months) he may retain the position for that period, after which time his position will be immediately bulletined vacant. This is not intended to apply in cases of *bona fide* sickness.

4. (a) In event of new supervisory positions being created, any employee required to perform the duties of a supervisor for a

period exceeding thirty days will, during the time he is so employed, be considered a supervisor and receive the salary allotted at the time to the position.

(b) Any employee appointed to relieve or replace a supervisor for a period exceeding ten days within any thirty-day period will, during the time he is so employed, be considered a supervisor and receive the salary allotted at the time to the position.

5. Senior qualified telegraphers will be deemed eligible and considered in line of promotion to the higher positions in the telegraph service.

6. In event of any telegrapher of at least two years' consecutive service desiring to be transferred to another office of the Company where a vacancy exists, he shall, upon application therefor, be given the preference, if duly qualified, but will not be allowed seniority in the ratings at the point transferred to.

7. In the absence of any good reason to the contrary, the last telegrapher automatically transferred into a higher rating, through the variation of the monthly list, shall, in case of reduction in the said rating, be the first one set back into the next lower rating.

8. Employees who are laid off owing to business depression will, upon returning to the Company's employ within six months, hold seniority for time actually worked.

#### ARTICLE V.

1. No telegrapher shall (except for investigation) be suspended, discharged, or disciplined, until his case has been investigated and he has been proven guilty of the offense charged against him, and upon his request to the Chief Operator, particulars of the charge will be given in writing. Telegrapher may, in such cases, have the assistance of a co-telegrapher, if he so desires. Should no decision be reached within ten days, he shall receive his regular pay until the decision is arrived at. If a telegrapher be found blameless of the matter under investigation, he will be paid his regular rating for all the time lost and necessary extra expense while attending the investigation (if away from home) and reinstated. He will also have, without discrimination, the right to appeal from the local to the general officers of the Company.

#### ARTICLE VI.

1. Telegraphers shall be granted leave of absence each year with pay at regular wages as follows: One week after the first and second years', and two weeks after three years' service.

2. Application for leave of absence filed in December of each year will be given preference in order of seniority of applicants from point of service, and applicants will be advised in January of the dates allotted them. December applicants will have preference over later applicants. The Company will, whenever possible, arrange vacations between and including the months of April and October, when desired.

3. In the event of a telegrapher entitled to a vacation with pay being discharged or leaving the service of the Company on the proper notice before obtaining the vacation that has been deferred after time allotted, he shall be paid salary for same.

#### ARTICLE VII.

1. Half holidays will be allowed on the following public holidays: New Year's Day, Good Friday, Victoria Day (or King's Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day.

2. A telegrapher when called upon to perform duties at other than his regular place of employment, shall be allowed all necessary expenses incurred in excess of his expense while at his regular place of employment, and overtime for travelling between the hours of 8 a.m. and 11 p.m., in excess of his regular trick. When assigned to such a duty a telegrapher shall be advanced a reasonable amount of expense money, when desired.

#### ARTICLE VIII.

1. When telegraphers are required to use typewriters, the same will be provided and maintained by the Company.

#### ARTICLE IX.

1. The Company will, upon request, meet a committee, which committee shall be known as the General Committee, for the purpose of adjusting grievances and negotiating schedules of rules and wages. When called upon to do so by the Company the committee shall produce proxies, showing that they are authorized by the majority of employees covered by these rules to represent such employees.

2. Any employee or employees having a grievance may take the matter up and may have the assistance of a co-employee, if he or they so desire, and all employees shall have the right of appeal, either alone or with the assistance of such co-employee (and personally or in writing), from the Chief Operator to the Traffic Superintendent and thence to the General Manager.

In the case of employees at non-functional offices, such employees' right of appeal will be to the District Superintendent and thence to the General Manager.

#### ARTICLE X.

1. A telegrapher discharged or leaving the service in good standing will be paid in full and given a certificate stating length and character of service, and, if discharged, the reason therefor. In case of delay, he will be paid regular wages for each day detained in excess of two days.

2. Telegraphers leaving the service of their own accord will be required to give the Company fifteen days' previous notice in writing. Before dispensing with the service (other than when discharged) the Company will give the telegrapher fifteen days' previous notice in writing. A telegrapher leaving the service in good standing will be given preference in re-employment over other applicants when a vacancy occurs.

#### ARTICLE XI.

The average minimum performance on all trunk circuits (not including automatic) of over five hundred miles shall be thirty messages per hour, and on all other first-class circuits thirty-three messages per hour, allowing thirty words or fraction thereof to count as one message in all other matter. Any loss through interruption to wire shall not be charged against the telegrapher's average, and in event of a telegrapher's average being challenged, the Company shall be required to furnish evidence to substantiate such charge.

#### ARTICLE XII.

1. At offices where two or more telegraphers are employed, the hours of duty shall be as follows: Eight hours shall constitute straight day duty, beginning and ending between seven a.m. and six p.m. Seven hours shall constitute all night duty, beginning at or later than eight p.m. Seven and one-half hours shall constitute all other tricks. No trick shall be split more than once, nor extend over twelve hours. At city one-man branch offices the hours of duty shall be eight hours within ten consecutive hours.

2. (a) Overtime accruing within eight hours' service shall be paid for *pro rata*. Overtime after eight or nine hours' service, as the case may be, shall be paid for at time and one-half.

(b) At offices (aside from city branch offices) where only one man is employed, *pro rata* time will be paid for the ninth hour and time and one-half thereafter.

3. All time worked on Sunday shall be paid on overtime basis, as per Paragraph 2, Article XII.

The Company may assign part of Saturday night staff to Sunday night duty on regular hours, such duty being considered part of the regular week's service. When tele-

graphers so assigned are required to perform service on Saturday nights, they will be paid for such service at overtime rates.

4. Employees working straight tours of duty will be granted short reliefs as follows:

Male—Ten minutes on each portion of tour.

Female—Fifteen minutes on each portion of tour.

Employees working split tours:

Male—Ten minutes on longer portion of tour.

Female—Fifteen minutes on longer portion of tour.

Where split tours are divided equally, employees will be entitled to one relief on each portion of tour.

## RULES FOR CLERICAL STAFFS

### ARTICLE I.

1. Right of promotion will be governed by seniority where ability is equal and sufficient. Such right of promotion at non-functional offices will extend over the offices in the district which are under the jurisdiction of the District Superintendent.

2. Vacancies will be filled by the senior competent clerk, without discrimination, who makes application, and who, in the opinion of the proper authority, is capable of filling the position; the company to bulletin all vacancies locally.

3. A clerk will, from the time of employment, be considered a regular employee.

### ARTICLE II.

1. In case of reduction of staff, otherwise than for personal cause, the clerk or clerks last employed will be dispensed with first.

2. Any clerk in good standing whose services have been dispensed with on account of reduction of force will be given a certificate of service and preference in filling new positions or vacancies.

### ARTICLE III.

1. Clerks declining promotion do not forfeit any rights to any other position they may be entitled to when a vacancy occurs, but will rank junior to the clerk receiving the position.

2. Clerks absent on leave when a vacancy occurs to which they are entitled, will not be prevented, on return within thirty days, from claiming the position.

3. Senior qualified clerks will be deemed eligible and considered in line of promotion to the higher positions in the telegraph service.

4. In event of any clerk of at least two years' consecutive service desiring to be transferred to another office of the Company where a vacancy exists, he shall, if duly qualified, upon application therefor, be given the preference over any new employee, but will not be allowed seniority in the ratings at the point transferred to.

### ARTICLE IV.

1. No clerk shall (except for investigation) be suspended, discharged or disciplined, until his case has been investigated and he has been proven guilty of the offense charged against him, and upon his request to the Manager, particulars of the charge will be given in writing. A clerk may, in such cases, have the assistance of a co-clerk, if he so desires. Should no decision be reached within ten days, he shall receive his regular pay until the decision is arrived at. If a

clerk be found blameless of the matter under investigation, he will be paid his regular rating for all the time lost and necessary extra expense while attending the investigation (if away from home) and reinstated. He will also have, without discrimination, the right of appeal from the local to the general officers of the Company.

### ARTICLE V.

1. Clerks shall be granted leave of absence each year with pay at regular wages, as follows: One week after the first and second years', and two weeks after three years' service.

2. Application for leave of absence filed in December of each year will be given preference in order of seniority of applicants from point of service, and applicants will be advised in January of the dates allotted to them. December applicants will have preference over later applicants. The Company will, whenever possible, arrange vacations between and including the months of April and October, when desired.

3. In the event of a clerk entitled to a vacation with pay being discharged or leaving the service of the Company on the proper notice before obtaining the vacation that has been deferred after time allotted, he shall be paid salary for same.

### ARTICLE VI.

1. Half holidays will be allowed on the following public holidays:—New Year's Day, Good Friday, Victoria Day (or King's Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. All time worked in excess of the half holiday shall be paid for at the rate of time and one half.

### ARTICLE VII.

1. Any employee or employees having a grievance may take the matter up and may have the assistance of a co-employee, if he or they so desire, and all employees shall have the right of appeal, either alone or with the assistance of such co-employee (and personally or in writing), from the Manager to the District Superintendent where he has jurisdiction, and thence to the General Manager.

2. In the case of employees at non-functional offices, such employees' right of appeal will be to the District Superintendent, and thence to the General Manager.

### ARTICLE VIII.

1. A clerk discharged or leaving the service in good standing will be paid in full and given a certificate stating length and character of service, and, if discharged, the reason therefor. In case of delay he will be paid regular wages for each day detained in excess of two days.

2. Clerks leaving the service of their own accord will be required to give the Company fifteen days' previous notice in writing. Before dispensing with the services (other than when discharged) the Company will give the clerk fifteen days' previous notice in writing. A clerk leaving the service in good standing will be given the preference in re-employment over other applicants when a vacancy occurs.

## ARTICLE IX.

1. Eight hours shall constitute a day's duty. No trick shall be split more than once nor extended over twelve hours.

2. Overtime shall be paid at *pro rata* rates, excepting Sunday work, which shall be paid for at the rate of time and one-half. The Company may assign part of Saturday night's staff to Sunday night duty as part of their regular week's assignment.

## ARTICLE X.

Any employee who is required to do relief work for a period exceeding ten days within any thirty-day period will, during the time he is so employed, receive the same wages as the employee relieved, providing such wages are not less than his own.

## RULES AND WAGES FOR INSTALLERS.

## ARTICLE I.

1. Employees assigned to the work of installation and repair of inside apparatus and will be considered Installers within th meaning of this schedule.

2. The right of promotion shall be govern- ed by seniority where ability is equal and sufficient.

## ARTICLE II.

1. In case of reduction of staff, the junior Installer will be dispensed with first and shall be given at least ten days' notice.

2. Any Installer in good standing whose services have been dispensed with on account of reduction of staff will be given preference of employment when a vacancy occurs.

3. No Installer shall (except for investiga- tion) be suspended, discharged or disciplined, until his case has been investigated and he has been proven guilty of the offence charged against him.

## ARTICLE III.

1. Eight consecutive hours, exclusive of the meal hour, shall constitute a day's work.

2. After eight hours work overtime will be paid at the rate of time and one half.

3. On New Year's Day, Good Friday, Victoria Day (or Kings' Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day, Installers will be paid for all work at *pro rata* rates per hour, in addition to their regular wage.

## ARTICLE IV.

1. An Installer who has been in the service for one year will be allowed one week's vacation with full pay; and after two years' service he shall be allowed two weeks annual vacation with full pay. The Company will endeavour to make all vacation reliefs between the months of April and October.

## ARTICLE V.

1. An Installer when required to travel from Headquarters shall be furnished with transportation and sleeping berth, together with a reasonable allowance for meals, and hotel accommodation, while away from Headquarters.

2. An Installer will be paid *pro rata* time if required to travel in excess of his regular daily trick between the hours of 8 a.m. and 11 p.m., two hours to be deducted for meals.

3. If required, an Installer will be advanced funds to meet travelling expenses.

## ARTICLE VI.

1. If an Installer receives leave of absence for a period of three months or less, he may retain his position and seniority for that period. If his leave of absence be extended for an additional three months, he may retain his seniority for such period, and his position will at once be bulletined vacant, but this is not intended to apply in cases of *bona fide* sickness.

## ARTICLE VII.

## (Wage Rates)

The rate of pay for all Installers shall be sixty cents per hour for the first year and seventy cents per hour thereafter, these rates to be effective April 1st, 1923.

This Agreement shall be effective May 1st, 1923, and will remain in effect subject to thirty (30) days' notice in writing by either party hereto.

(Sgd.) GEO. D. PERRY,  
Vice Pres't. and Gen'l. Manager.

(Sgd.) E. J. YOUNG,  
General Chairman.

(Sgd.) THOS. TAYLOR,  
Chairman Central District.

(Sgd.) ROBT. T. BRADLEY,  
Chairman Western District.

Toronto, Ontario,  
July 24th, 1923.

## SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.

**T**HE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act, 1907, for the fiscal year ending March 31, 1923; and from March 22, 1907, to March 31, 1923.

**I.—TABLE SHOWING PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1922 TO MARCH 31, 1923**

Industries affected	Number of applications for Boards received*	Number of Boards established	Number of strikes not averted or ended
<b>I.—DISPUTES AFFECTING MINES, TRANSPORTATION AND COMMUNICATION AND OTHER PUBLIC UTILITIES:</b>			
(1) <i>Mines:—</i>

Dominion Power and Transmission Company and Hamilton Street Railway Company, respectively, and various classes of their employees; (5) Ottawa Electric Railway Company and certain of its employees, and (6) employers, members of Association of Canadian Building and

Construction Industries, Ottawa Branch, and certain of their employees being hod-carriers.

On March 31, 1923, results were still pending in connection with six applications concerning disputes between (1) Canadian National Railways, Western Lines, and certain of its employees being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6; (2) Canadian Pacific Railway Company, Western Lines, and certain of its employees being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6; (3) Canadian National Railways, Western Lines, and its dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees; (4) Brantford Municipal Railway Commission and certain of its employees being street railway workers, members of Local Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America; (5) Corporation of the City of Prince Rupert and certain of its employees being members of Civic Employees' Union No. 20, Trades and Labour Congress of

Canada, and (6) Winnipeg Electric Railway Company and certain of its employees being members of the Gas Workers' Union of Winnipeg (Independent).

The figures contained in Table II may be thought to show discrepancies as compared with those appearing in the yearly summary. A closer examination will, however, show the respective statements to be in agreement. A complete statement of proceedings for a year must show all disputes dealt with during the fiscal year. The figures of the yearly statement include, therefore, disputes carried over from the previous year and which are counted in the summary of that year's proceedings. Thus the same dispute may properly figure in the annual statement for each of two years. In the statistical recapitulation covering several years, as above, it is necessary that no dispute shall be counted more than once, and account is taken of the number of applications received during the year and thus brought within the purview of the statute.

---

### SETTLEMENT OF STRIKE OF COAL MINERS AT CANMORE, ALBERTA.

ON June 14 a strike of coal miners employed by the Canmore Coal Company took place at Canmore, Alberta. The dispute arose out of the dismissal of two men. The strike was in contravention of a clause in the Agreement between the Western Canada Coal Operators' Association and District 18, United Mine Workers of America, which reads as follows:

*Management of Mine.* — The right to hire and discharge, the management or the mine and the direction of the working forces are vested exclusively in the Company, and the United Mine Workers of America shall not abridge this right. However, the Company agrees not to discharge employees or refuse work to applicants on account of, or because

of, their affiliation with the United Mine Workers of America.

On instructions of the officials of District 18 work was resumed on July 7 and negotiations were begun for a settlement of the dispute in accordance with this agreement. The representatives of the two parties were Messrs. R. M. Young, Commissioner of the Western Canada Coal Operators' Association, and W. A. Sherman, President of District 18, United Mine Workers of America.

As these two could not reach an agreement upon the matters in dispute they sent a joint request to the Honourable James Murdock, Minister of Labour, asking him to appoint an independent

chairman. The Minister accordingly appointed Rev. Dr. Charles W. Gordon, Chairman of the Council of Industry for Manitoba, as independent chairman. On July 27, a settlement of the matters in dispute was reached on the following terms suggested by the Chairman.

STATEMENT OF THE DISPUTE BETWEEN THE CANMORE COAL COMPANY AND DISTRICT No. 18 OF THE UNITED MINE WORKERS OF AMERICA

The management of the Canmore Coal Company, Limited, after observation of the work of two of its employees engaged in rock shovelling in a new rock slope, and after notifying these employees as to the unsatisfactory nature of their work, in view of the spirit shown in response to the warning, as well as the lack of efficiency in service rendered by the men, determined to dismiss the employees, which on June 7th was done.

The Pit Committee representing the local union, in a series of conferences which lasted till June 13th, sought to have the men reinstated, but this the Management found itself unable to do.

Immediately upon the announcement of the decision on June 14th, the mine employees, in direct contravention of Section C of the Article subtitled "Settlement of local and general disputes, went on strike which lasted until July 6th.

On July 4th the District officials who apparently had not been notified of the strike, on being advised of the strike, ordered the men back to work. On July 7th work was resumed, and negotiations between the parties in accordance with the clause of the Agreement dealing with the settlement of disputes were begun. The result of these negotiations rendered necessary the appointment of an Independent Chairman, in harmony with the Agreement, under whom negotiations were resumed on July 24th.

After various conferences, in which the whole matter was carefully considered, the following basis of settlement was suggested by the Chairman and concurred in by the two representative committees:

1. The historical statement as above is accepted as a substantial statement of fact.

2. The Committee of the United Mine Workers of America frankly acknowledge that the strike of June 14th-July 6th was in contravention of the Agreement between the Canmore Coal Company, Limited, and District Eighteen, United Mine Workers of

America, and expresses regret for the same, the Committee desiring to go on record as standing for the maintenance of agreements both in spirit and in letter.

3. The principle involved in the article "Management of Mine" which gives to the management the full and exclusive right to direct and control the working forces for the mutual benefit of all parties engaged in the industry, and especially in connection with the hiring, firing and placing of employees in harmony with the clauses of the Agreement, is hereby re-affirmed and accepted.

4. The principle fundamental in all right industrial relations, and which is expressed and provided for in this Agreement, namely, that any employee believing that he has a just grievance against the management, has a right of appeal, is hereby re-affirmed and accepted.

5. The management was wholly within its right in discharging the two employees for causes which in the judgment of the management were good and sufficient.

6. The management, however, without abrogating in any degree its right of discharge in these cases, accepts the suggestion of the Chairman that in the case of Mr. Mendryuz a less penalty than permanent discharge for the offences complained of might be sufficient, and that this man be taken again on the working force of the Company, it being understood that he gives his frank and full undertaking to give faithful and hearty service according to his ability. In view of all the circumstances, the Chairman does not feel justified in recommending compensation for idle days.

7. In view of the fact that the other man, Mr. Dykum, failed to appear before the Committee, the Chairman suggests that his case be withdrawn.

8. The Chairman ventures in conclusion to respectfully remind both parties that the highest success for all parties associated in industry is dependent upon mutual co-operation, and that the burden of anxiety and toil necessary to all human effort is sensibly lightened by a spirit of sympathy and brotherhood.

(Signed) CHARLES W. GORDON  
Chairman.

## THE COST OF LIVING COMMISSION FOR THE COAL MINING INDUSTRY IN VANCOUVER ISLAND, BRITISH COLUMBIA

A ROYAL Commission was appointed by Order-in-Council on January 21, 1919, to determine every three months any changes occurring in the estimated cost of living for coal miners in Vancouver Island and to determine the amount by which wages should be increased or decreased for the ensuing three months in accordance with the change in the cost of living; the Commission being appointed at the request of the operators and miners concerned.

The Commission consisted of one representative of the coal miners, one representative of the coal mining operators with the Fair Wages Officer of the Labour Department resident at Vancouver as chairman.

The Commission has continued to make quarterly investigations since that time, agreements having been made between committees of the coal miners and the principal operators that wages should be adjusted according to the findings of the Commission.

The appointment of the Commission followed the settlement of disputes as to changes in wages in the district during 1918. (LABOUR GAZETTE February, 1919, page 111 and May, 1919, page 535). Between 1914 and 1918 wages of miners had been increased by about 30 per cent or approximately \$1 per day. Early in the year 1918 the miners demanded an increase in wages to meet the rising cost of living and through the mediation of Mr. D. T. Bulger, the Fair Wages Officer of the Labour Department stationed at Vancouver, a flat increase of 50 cents per day was agreed upon, effective from May 1.

This was a cost of living bonus in addition to the daily wages of men on day rates and to the daily earnings of men on "contract rates", that is "piece

rates" per ton, yard, etc. In August the miners represented that the previous increases in wages had covered only the increases in the cost of food, etc., but that the cost of clothing and other items had been rising, particularly during 1918. A daily increase of 75 cents in November was the sum estimated by Mr. Bulger as the amount required to meet not only the increase in the cost of food, but the increases in other items from 1914 up to that time. The Fuel Controller for Canada had fixed the prices of coal at the mines, based upon costs, and permitted the operators to raise the prices of coal in accordance with the increased costs due to these wage increases, retail prices being advanced accordingly under the Fuel Controller's regulations governing the prices and distribution of coal. The operators and miners then agreed that similar adjustments in wages according to changes in the cost of the necessities of life should be made quarterly and that the Dominion Government should be asked to appoint a Commission including a representative from each party to investigate and report the changes to be made.

A similar policy had been adopted early in 1917 in the coal mining area in South Eastern British Columbia and Alberta, commonly known as District 18 of the United Mine Workers of America, and wages and price of coal were in that district adjusted by a similar Commission operating under the Director of Coal Operations for that area from April 1917 to December, 1918. In August, 1918, a similar arrangement was made for the shipbuilding industry in British Columbia. In this case the shipbuilding employers and the employees agreed to use the information as to prices published in the LABOUR GAZETTE regarding Vancouver, New West-

minster and Victoria, and jointly selected Mr. W. L. MacDonald of Vancouver as "Adjustor". The quarterly investigations were made by him under the authority of the Department of Labour from June, 1918, to September, 1919. (LABOUR GAZETTE June 1918, page 412, and December, 1919, page 1404). In July, 1918, an agreement was reached between the Vancouver Gas Company and its employees that wages should be adjusted quarterly according to the changes in the cost of living as determined by Mr. MacDonald and the latter made the investigations required for this agreement from June, 1919, to October, 1919.

Arrangements for the adjustment of industrial disputes on similar lines were made about this time in various countries, one instance of particular interest in this connection being that effected in the United States for the adjustment of wages of employees of shipbuilding contractors for the United States Government, where the Shipping Board agreed that the necessary cost of living investigations should be made by the United States Bureau of Labour Statistics.

Toward the end of 1919 and early in 1920, five Conciliation Boards were established under the Industrial Disputes Investigation Act to deal with disputes as to wages in coal mining in Nova Scotia, and the following provision was inserted in the agreement resulting between the Dominion Coal Company and its employees with similar provisions in other cases:—

Provided, however, that should there be any change in the cost of living or any disturbance in economic conditions, or any disparity in the Schedule of Wages paid by any other Coal Company in the Province of Nova Scotia, this Schedule may be open for revision at the instance of either party to this agreement at the end of each four months' period during the existence of this Agreement.

In this case however no provision, was made for investigation to ascertain

the extent of the changes in the cost of living or other conditions mentioned. A Royal Commission, appointed on July 1, 1920, to deal with a demand for an increase in wages among other matters, recommended an increase of \$1 per day for men on day wages and 25 per cent for contract miners, subject to the adoption of a system of readjustment of wage rates according to output. This recommendation was not accepted and a flat increase of 55 cents per day and 10 per cent for contract rates was accepted in November for one year from December 1, 1920.

In the autumn of 1922, in renewing the agreement with its employees, one company established the cost of living bonus at \$1 per day, the amount as adjusted at the time by the Commission being 93 cents. (LABOUR GAZETTE November, 1922, page 1214.) The agreements for other collieries run until October 31, 1923. (LABOUR GAZETTE February, 1922, page 228.) In the autumn of 1921, the agreements provided that the increases in wages prior to May, 1918, should be included in the regular schedules, making \$4.20 a new base for all rates to which the cost of living bonus as adjusted from time to time continues to be added, no charges to be made below the new schedule.

The report for the latest inquiry for the quarter ending June 30, 1923, was made July 31, 1923. The Commission consisted of Mr. Matthew Gunness, representing the miners; Mr. Tulley Boyce, representing the operators, and Mr. F. E. Harrison, Fair Wages Officer of the Department of Labour, chairman.

As in previous investigations, forms containing a list of groceries, provisions, meats, etc., were sent out to the merchants and dealers with whom the majority of the miners were accustomed to trade in the various localities. The method of computing the changes for the period under review was the same as used for previous adjustments, name-

ly, to determine the percentage of increase or decrease, as the case may be, of prices at the end of the quarter, over the prices at the end of the preceding quarter, for groceries, provisions, meats, etc., and to add a further two-fifths of this increase (or decrease) as an equivalent to cover similar increases (or decreases) in clothing, etc.

For the quarter ending June 30, 1923, a decrease of 0.68 per cent was ascertained, which amounted to a decrease in wages of 2 cents per day both where the base rate was \$3 per day, and where the base rate was \$3.15, the decrease in wages to become effective on August 1, 1923, and to apply to all underground service, clerical and office employees.

Slight increases were noted in sugar, barley, sago, canned roast beef, brooms, soda biscuits, cookies and evaporated peaches. Sharp increase was noted in pickles. Slight decreases were noted in jam, molasses, beans, canned salmon, flour, graham flour, pastry flour, rolled oats, ch  ese, bacon, butter, evaporated figs and fresh meats. Sharp decreases were noted in canned corned beef and evaporated apricots.

No charges were noted in tapioca, peas, canned beans, peas and corn, tomatoes, lunch tongue, laundry soaps, vinegar, buckwheat flour, canned meats, oatmeal, lard, milk, tea, coffee, currants, flavouring extracts and prunes.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1923

**T**HE number of strikes and lockouts in Canada in existence at some time or other during the month of July was four less than in June. The time loss for July was greater than in July, 1922, being 310,608 working days as compared with 255,734 working days lost in the corresponding month of the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
July, 1923.....	21	17,104	310,608
June, 1923.....	25	6,908	55,609
July, 1922.....	21	15,553	255,734

trear; printing compositors, Hamilton; three strikes of printing compositors at Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; steel workers, Sydney; motormen and conductors at Niagara Falls; longshoremen, Miramichi, and seamen at Vancouver.

One strike listed in the statistical table was reported in July to have terminated prior to July 1, and had not previously been so reported in earlier issues of the LABOUR GAZETTE.

Of the five disputes which terminated during the month, three involving 13,733 employees terminated in favour of the employers; one involving 300 employees terminated in favour of the employees, and one, involving 250 employees was terminated by a compromise. Of the five disputes commencing during the month, one was for increased wages, one for increased wages and shorter hours, and three were in sympathy with the

Sixteen disputes involving 2,821 work-people were carried over from June. One of the sixteen strikes commencing prior to July and four of the five commencing during July, terminated during the month. At the end of July, therefore, there were on record 16 strikes: rafting crew, South Devon; clothing workers, Toronto; photo engravers, Mon-

steel workers of Sydney who had gone on strike during June.

The industries chiefly affected by disputes were: Printing and Publishing, where ten disputes involved 719 employees, causing a loss of 17,975 days; Coal Mining, where four disputes involved 13,983 employees and a time loss of 240,433 working days; Water Transportation, two strikes, 331 employees, time loss of 7,025 working days; Iron and Steel Manufacturing, one strike involving 1,700 employees with a time loss of 42,500 working days, and Street Railway Construction, one strike, 300 employees and a time loss of 900 working days.

The most important industrial disturbance during the month was the strike of coal miners in Cape Breton which involved 11,180 employees. This strike was in sympathy with the steel workers' strike of Sydney and was also to enforce the withdrawal of the military forces and the provincial police. Other sympathetic strikes of coal miners occurred in Pictou County, N.S., and Drumheller, Alta.

The record of the Department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

Information was also received in the Department relating to disputes causing interruptions to industry during June and July, which were not strikes as above defined. Reference was made in

the June issue of the LABOUR GAZETTE to a strike of four carpenters at Pembroke, which occurred on June 1, when the union demanded a renewal of the previous year's agreement. Work was resumed June 18, three contractors having signed the agreement. On July 10, some 200 trackmen at New Glasgow ceased work on account of the discharge of an employee. Negotiations were carried on with the result the man was re-engaged and work was resumed July 11.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**COAL MINERS, CAPE BRETON, N.S.:**—This strike occurred on June 14, against the discharge of certain employees. Work was resumed July 7, when the men returned to work pending a final decision on the matter which was submitted to arbitration. Elsewhere in the LABOUR GAZETTE a detailed account of this settlement is given.

**COAL MINERS, CAPE BRETON, N.S.:**—On July 4, 11,180 coal miners in Cape Breton went on strike in sympathy with the steel workers at Sydney who had ceased work June 28, and also to enforce the withdrawal of the military forces and provincial police. After being on strike about three weeks the strike was called off on July 24, on orders from the International Union headquarters. A full account of this strike appears elsewhere in the present issue of the LABOUR GAZETTE.

**COAL MINERS, PICTOU COUNTY, N.S.:** On July 10, coal miners to number of 1,853 throughout Pictou County went on strike in sympathy with the steel workers at Sydney. Conferences were held and at a mass meeting held at Westville on July 18, it was decided to call the strike off. This was done and work was resumed July 23.

**COAL MINERS, DRUMHELLER, ALTA.:**—Seven hundred coal miners at Drumheller, Alta., went on strike July 12, in sympathy with the steel workers at Sydney, N.S. On July 14, a mass meet-

## STRIKES AND LOCKOUTS DURING JULY, 1923.

Industry, occupation and locality	Number of employees involved	Time lost in working days	Remarks
(a) Strikes and lockouts commencing prior to July, 1923.			
LOGGING—			
Rafting crew, pulp and paper South Devon, N. B.	37	925	Commenced June 12, for increased wages. Underminated.
MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Canmore, Alta.	250	1,250	Commenced June 4, against the discharge of employees. Men returned to work July 7 pending a final agreement.
MANUFACTURING—			
<i>Clothing:</i>			
Clothing workers, Toronto, Ont.	25	625	Commenced April 17, for recognition of union. Underminated.
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que.	7	175	Commenced May 2, 1921 for shorter hours. Underminated.
Printing compositors, Hamilton, Ont.	10	250	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Underminated.
Printing compositors, Montreal, Que.	10	250	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Underminated.
Printing compositors, Montreal, Que.	140	3,500	Commenced July 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Montreal, Que.	12	300	Commenced September 15, 1921. Employer refused to negotiate a new agreement with the union. Underminated.
Printing compositors, Toronto, Ont.	350	8,750	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Winnipeg, Man.	74	1,850	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Underminated.
Printing compositors and pressmen, Halifax, N. S.	21	525	Commenced May 2, 1921 for shorter hours with same weekly wages. Underminated.
Printing compositors and pressmen, Ottawa, Ont.	84	2,100	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors and pressmen, Vancouver, B. C.	11	275	Commenced May 2, 1921, for increased wages and 44-hour week. Underminated.
<i>Iron, Steel and Products:</i>			
Steel workers, Sydney, N. S.	1,700	42,500	Commenced June 28, for increased wages, the 8-hour day and check-off system of collecting union dues. Underminated.
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Builders' labourers, Quebec, Que.	.....	.....	Commenced May 1, 1923, for increased wages. Information received indicates employment conditions are no longer affected.

## STRIKES AND LOCKOUTS DURING JULY, 1923.—(continued.)

Industry, occupation and locality	employees involved	Time loss in working days	Remarks
<b>TRANSPORTATION—</b>			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	9	225	Commenced July 2, 1922, for recognition of union. Unterminated.
<i>Water transportation:</i>			
Seamen, Vancouver, B. C.	81	2,025	Commenced June 29, for increased wages. Unterminated.
<b>(b) Strikes and lockouts commencing during July, 1923.</b>			
<b>MINING, NON-FERROUS, SMELTING AND QUARRYING—</b>			
Coal miners, Cape Breton, N.S.	11,180	216,700	Commenced July 4, in sympathy with striking steel workers and to enforce the withdrawal of troops and provincial police. July 24. Miners voted to call of strike July 24 on orders from International President.
Coal miners, Drumheller, Alta.	700	2,100	Commenced July 12, in sympathy with the steel workers at Sydney. Miners voted to return to work July 16 on orders from district President.
Coal miners, Pictou County N.S.	1,853	20,383	Commenced July 10, in sympathy with the steel workers at Sydney. Miners voted to return to work July 23, on orders from International President.
<b>CONSTRUCTION—</b>			
<i>Street railway construction:</i>			
Labourers and trackmen, Montreal, Que.	300	900	Commenced July 20, for increased wages. Settled by negotiations and work resumed July 24.
<b>TRANSPORTATION—</b>			
<i>Water transportation:</i>			
Longshoremen, Miramichi, N. B.	250	5,000	Commenced July 9, for increased wages and shorter hours. Unterminated.

ing was held at which it was decided that the strike would be called off. Work was resumed July 16.

**PRINTING TRADES IN TEN CITIES:—**  
The strike of printing trades in job offices in various cities which began in the spring and early summer of 1921, for the 44-hour week, was still in progress in ten cities and involved 710 employees and resulted in a time loss of 17,975 working days during July.

**STEEL WORKERS, SYDNEY, N.S.:—**  
This strike was carried over from the previous month's record and remained unsettled at the end of July. Information received in the Department indicates that it was terminated early in August.

**LABOURERS AND TRACKMEN, MONTREAL:—**  
A strike of 300 labourers and trackmen at Montreal took place on July 20, for an increase in wages. The

prevailing rates were 30 cents per hour for labourers and 37 cents per hour for trackmen; the rates demanded were 35 cents per hour for labourers and 42 cents per hour for trackmen. Negotiations were carried on and an increase of 5 cents per hour was granted. Work was resumed July 24.

LONGSHOREMEN, MIRAMICHI, N.B.: — On July 9, a strike of 'longshoremen occurred which involved about 250 employees at different mills along the Miramichi. The 'longshoremen had been receiving 50 cents per hour for a 10-hour day. They now demanded 55 cents per hour and a 9-hour day. At the end of July this strike remained unsettled.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING JUNE 1923

**T**HE British *Ministry of Labour Gazette* for July contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during June, 1923, based upon returns from employers and workpeople.

**NUMBER, MAGNITUDE AND DURATION.** — The number of trade disputes involving a stoppage of work, reported to the Department as beginning in June in Great Britain and Northern Ireland, was 54, as compared with 49 in the previous month and 32 in June, 1922. In these new disputes 31,000 workpeople were directly involved, and 2,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, 66,000 workpeople were involved, either directly or indirectly, in 47 disputes which began before June, and were still in progress at the beginning of that month. The number of new and old disputes was thus 101, involving 99,000 workpeople, and resulting in a loss during June of 1,244,000 working days.

**CAUSES.** — Of the 54 disputes beginning in June, 12, directly involving 8,000 workpeople, arose out of proposed reductions in wages, 12, directly involving

Groups of Industries	Number of disputes in progress in June			Number of workpeople involved in all disputes in progress in June	Aggregate duration in working days of all disputes in progress in June
	Started before June 1	Started in June	Total		
Building .....	2	12	14	4,000	54,000
Mining and quarrying .....	4	12	16	16,000	113,000
Metal, engineering and shipbuilding	13	4	17	32,000	697,000
Textile .....	2	4	6	31,000	230,000
Transport .....	3	3	6	6,000	17,000
Food, etc., trades	2	3	5	7,000	96,000
Other trades.....	21	16	37	3,000	37,000
Total, June, 1923	47	54	101	99,000	1,244,000
Total, May, 1923	41	49	90	48,000	807,000
Total, June, 1922	50	32	82	*311,000	2,078,000

\*A dispute involving over 250,000 people in the engineering industry was in progress in June.

1,000 workpeople, on other wages questions; 15, directly involving 14,000 workpeople, on questions of trade union principle; 4, directly involving over

6,000 workpeople, in sympathy with workpeople involved in other disputes; and 11, directly involving 2,000 workpeople, on other questions.

**RESULTS.** — Settlements were effected during June in the case of 32 new disputes, directly involving 20,000 workpeople, and 14 old disputes, directly involving 3,000 workpeople. Of these new and old disputes, 7, directly involving 10,000 workpeople, were settled in favour of the workpeople; 17, directly involving 3,000 workpeople, in favour of the employers; and 22, directly in-

volving 10,000 workpeople, were compromised. In the case of 12 disputes, directly involving 9,000 workpeople, work was resumed pending negotiations.

The accompanying table analyses the disputes in progress in June in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all disputes in progress.

---

## PROCEEDINGS OF THE INTERNATIONAL LABOUR ORGANIZATION (LEAGUE OF NATIONS)

### Governing Body of International Labour Office

**A**T the Session of the Governing Body of the International Labour Office which was held on April 10 to 13, a committee of nine members was appointed to make recommendations as to the means of furthering the ratification of the eight hours convention. The committee met at Paris on June 2 and adopted the following resolution:—

“Considering that difficulties have occurred with regard to the application of the provisions of the Washington Convention concerning the Eight Hour Day and 48-hour Week, and that these difficulties have impeded the ratification of the Convention by certain countries.

“Considering that one of the countries thus affected is Great Britain, a country in which hours of work are in practically general agreement with the terms of the Convention.

“Paying tribute to the desire expressed by the British Government to ratify the Convention and after examination of this Government’s suggestion to remove the difficulties in question by means of a revision designed to render the Convention more elastic,

“Considering that such revision might destroy the considerable value attaching to the present Convention, even not ratified, as a model and as a means of stimulating national legislation,

“Is of opinion that before taking up any position with regard to the question of revision it is desirable to request countries which wish to ratify the Convention and are prevented from so doing by the difficulties referred to above, to indicate the definite amendments required to enable them to ratify the Convention.”

The report of this committee came before the Governing Body at its nine-

teenth session which was held on June 12 and 13, but in accordance with a proposal of the Workers' Group, it was decided to postpone until its next session the discussion and vote on the conclusions of the report.

#### Ratification of Draft Conventions of International Labour Conference

On June 13 it was reported by the International Labour Office that 73 ratifications of draft conventions and recommendations of the International Labour Conference had been registered by the Secretary General of the League of Nations as compared with 65 on February 1, reported in the March issue of the LABOUR GAZETTE on page 225. Since the Washington Conference twelve countries have notified their adherence to the Berne Convention with regard to the prohibition of the use of white phosphorus. In sixteen cases ratification had been authorized by the competent authority but had not yet been communicated and in 94 cases ratification had been recommended to the competent authority by the government but approval had not yet been signified. The number of laws passed and administrative measures adopted giving effect partially or wholly to the provisions of the draft conventions and recommendations was 98 and the number of such legislative

measures proposed but not finally adopted was 68.

#### New Labour Legislation in Japan

The following three bills were introduced by the Government of Japan during the last session of Parliament and duly passed without amendment by both Houses, according to information received by the International Labour Office:

1. Act amending the Factory Act.
2. Act concerning the minimum age for employment in industry.
3. Act regarding the minimum age and health certificate of seamen.

The act concerning the minimum age of industrial workers embodies all the provisions of the Draft Convention of the International Labour Conference of Washington in 1919, fixing the minimum age for admission of children to industrial employment, and the Act regarding the minimum age and certification of health of seamen embodies the provisions of the Genoa Draft Convention fixing the minimum age for admissions of children to employment at sea and the Geneva Draft Convention concerning the compulsory medical examination of children and young persons employed at sea.

---

### RECENT LABOUR LEGISLATION IN MANITOBA

SEVERAL measures affecting labour were enacted at the session of the Manitoba Legislature which was held in the early months of the present year. The opening Speech from the Throne foreshadowed a policy of rigorous retrenchment, stating that the Government while regretting the severe necessity, was obliged, in view of their obligations to the whole people of Manitoba, to continue to apply po-

licies of economy in public expenditure. In furtherance of this policy the estimated requirements for the administration of Mothers' Allowances were reduced from \$490,000 to \$450,000. Reference was made in the Speech to the Dominion-Provincial conference on unemployment in September, 1922, in which the Province took part, subsequently aiding the municipalities financially to carry on the work necessary to provide employment.

The Masters and Servants Act was amended in regard to the allowance of appeals from judgments or orders under the Act, the previous limit of \$25 as the lowest amount regarding which appeal is allowed, being reduced to \$20.

Free employment agencies, formerly allowed under the provisions of the Employment Bureau Act of 1918, were forbidden by an amendment to the Act which extended to agencies operating gratis the existing prohibition of those operated for gain, the only exception permitted to this rule being employment offices maintained by employers as part of their business organization for the exclusive purpose of engaging workers for such business.

The benefits of the Mechanics' and Wage Earners' Lien Act were extended to persons engaged in the clearing of any land of timber or scrub. The same Act was amended also in the sections relating to the enforcement of liens, facilities being created for transferring applications to any county court in any judicial division of Manitoba.

The Builders' and Workmen's Act was amended by the inclusion of municipalities under the definition of proprietors as understood in the Act, and by allowing appeals in all cases in which the amount in question is \$20 instead of \$200 or more, excepting only those cases which are concerned with the penalties imposed under the Act upon builders or contractors for not keeping pay lists as required.

The Winnipeg City Charter was amended to enable the city council to prohibit the employment (except under special circumstances) of any female persons in certain businesses owned, managed, or conducted by Chinese persons, that is, victualling houses, hotels, refreshment, reception, or entertainment rooms, and laundries.

An Act was passed to enable municipalities to borrow money for seed grain

purposes up to \$60,000 subject to certain conditions, the Lieutenant-Governor in Council having authority to guarantee debentures issued for this purpose.

The Farm Loans Act and the Rural Credits Act were also enlarged in several particulars.

An Act was passed to make uniform the law respecting warehousemen's liens, being similar in its provisions to acts enacted in other Provinces.

Another Act provided for the annual licensing of grain dealers in the Province.

The Legislature passed a resolution on May 4 expressing the opinion that grand juries, while they had rendered great service in the past, are now unnecessary and unduly expensive for the service rendered, and recommended "that His Majesty's advisers take such steps as may be expedient to bring about the abolition of the grand jury system in Manitoba."

A special session of the legislature was held at the end of July, to give effect to the policy on liquor control which was approved by the electors of the Province in a recent referendum vote. At the special session it was stated that the reductions which had been made in the allowances to mothers under the Mothers' Allowance Act since the beginning of the present fiscal year, in consequence of the Government's policy of retrenchment above referred to, amounted to about 8 per cent of the previous year's total. The names of all eligible applicants, it was stated, were received and placed on a waiting list, and at the end of July these, numbering eighteen families, were all receiving support. It was found by that time that the Mothers' Allowance Commission had sufficient funds to take care of all applicants from January 1 to July 1, and it was anticipated that \$450,000, the estimated amount of expenditure, would be sufficient for the requirements of the fiscal year.

## THE STRIKES OF STEEL WORKERS AND COAL MINERS IN NOVA SCOTIA

---

ON June 28, employees in the plant of the Dominion Iron and Steel Company, at Sydney, Nova Scotia, members of the Amalgamated Association of Steel and Tin Workers, commenced a strike. They had demanded a 20 per cent increase in wages, an eight-hour day and the "check-off", that is, the deduction by the employer of the union dues from the pay of those employees who belonged to the union and had signed a request to the employer to make such reduction until further notice. These demands had not been granted and negotiations on the subject had apparently promised no solution. On July 3, the coal miners employed by the Dominion Coal Company and the Nova Scotia Steel and Coal Company went on strike in protest against the presence of the militia, which, shortly after the steel workers' strike began, had been, on the requisition of the County Judge, sent into the district, and of the provincial police, sent in at the request of the County Sheriff and the Chief of Police of Sydney. Between July 4 and July 16, and in support of the position assumed by the Sydney miners with respect to the presence in the district of soldiers and provincial police, miners went on strike in Pictou County, Nova Scotia, and at Drumheller, Alberta, while sometime later small numbers of men employed at other mines in the neighbourhood of Sydney ceased work.

Prior to these strikes there had been disputes as to wages, not only in the steel plant but in many of the coal mines involved. Most of the mines affected were subsidiaries of the British Empire Steel Corporation, Limited, which controlled the Dominion Coal Company, Glace Bay; the Dominion Iron and Steel Company, Sydney; the Nova Scotia Steel and Coal Company of

Sydney Mines and Trenton; the Acadia Coal Company, Stellarton and Thorburn, and the Cumberland Railway and Coal Company, Springhill, Nova Scotia. A strike of steel workers had occurred in February against the dismissal of an employee, alleged to be on account of union activities, and in June the coal miners at Sydney Mines were on strike for a day or two against the Company's action in laying off a few men. In May also, in the steel works, 36 moulders' helpers had struck against the employment of a non-union man but returned to work in two days without attaining their object.

There had been for some time manifested among members of certain labour organizations in the district, a movement to cooperate with the advocates of communism on the lines of the Soviet system of government in Russia, but the Executive Board of the United Mine Workers of America had refused to allow the Nova Scotia miners' local in District 26 to join this movement. Search in homes and offices of labour men by the provincial police for evidence of agitation and sedition had led here and there to threats of strikes in protest. Prior to May 1st there had been reports that demonstrations of workmen's support of various labour policies in the Sydney district and elsewhere might lead to strikes or disturbances on that date, but no trouble occurred beyond parades and speeches advocating various policies; numbers of workers took a holiday while others joined in the demonstrations.

The coal miners had been on strike for three weeks in August, 1922, against the wage reduction of January 1st of that year; the reduction was about 25 per cent while the settlement of the August strike left the miners with a

scale 15 to 20 per cent below the 1921 rates with agreements effective until January 15, 1924. During May and June of this year representatives of the miners' union negotiated with the employers for a revision of this wage scale with a view of securing a restoration of the scale in effect from November, 1920, to December, 1921. Representatives from the head office of the United Mine Workers of America at Indianapolis participated in these negotiations, but the employers stated that coal had been sold on contracts based on the existing wage scale and insisted that the scale could not, therefore, be materially increased. The union held a district convention at New Glasgow on June 22, 1923, at which it was decided to take a ballot as to a strike for the 1921 wage scale. During the convention a telegram was received from the International President of the United Mine Workers stating that the agreements until January 15 must be kept; it was however decided to take a ballot on July 3 and to print the International President's message on the ballot.

In the meantime representatives of the steel workers' union, including representatives from the International headquarters, negotiated with the steel company for an increase in wages and the "check-off". In September, 1922, an increase in wages of 15 per cent had been given, raising the rate for common labour from 25 cents per hour to 28 cents and in April, 1923, a further increase of 10 per cent and upward was given, the rate for common labour rising from 28 cents to 32 cents per hour. The eight-hour day with three shifts for the twenty-four hours, instead of two shifts of twelve hours, or of eleven and thirteen hours for work on continuous processes in iron and steel manufacture, had been for some time a subject of discussion in Canada and in the United States, and was one of the original demands of the union, but was not pressed towards the end of the negotiations. A strike ballot had been taken at the end of May. On June 27 the decision

of the steel company directors was received by the union officials and the strike was called early in the morning of the 28th. About 2,700 out of some 3,500 employed in the steel plant were reported to have ceased work. Within an hour, at 4 A.M., the chief of police was called to deal with obstruction of the street. Certain disorders occurred that same night. Attempts were made to prevent workers in the boiler house and coke ovens from working. A crowd attacked one of the gates of the steel plant, but were driven off by the steel company police and the city police. Masks were worn by some of the crowd and that night and during the days following arrests were made for assault, intimidation, wearing of masks, etc. A magistrate reading the Riot Act was knocked unconscious by a stone. About midnight the County Judge sent a requisition for troops to the Militia Officer commanding the district at Halifax, and the first detachment, 250 men, reached Sydney at 4.00 A.M., June 30, others following from time to time until about the middle of July, when the number reached about 2,000.

From the press reports it would appear that on the second day of the strike the County Sheriff and the Chief of Police of Sydney asked the Attorney General of the Province for the aid of the provincial police and that some officers of that force reached Sydney the following day. The Provincial Government notified both parties that it was prepared to mediate.

Disorders and arrests occurred on the 29th and 30th, the Riot Act being read on the latter date, when also the troops fired over the heads of the crowd, after which the disturbance subsided. Similar disorders occurred from time to time during the strike. Action of the provincial police in handling the crowd on the night of July 1 was discussed by the Sydney Police Commission the following day and later, the provincial authorities undertaking that any police acting improperly would be dismissed and punished according to law. The City

Chief of Police stated that those who complained of the conduct of the provincial police had been themselves disorderly. Later the Attorney General advised the Sydney Police Commission to engage sufficient special constables to keep order in the city. J

On July 3, the coal miners employed by the Dominion Coal Company and the Nova Scotia Steel and Coal Company (like the Dominion Iron and Steel Company, subsidiaries of the British Empire Steel Corporation), held meetings and decided to strike against the use of provincial police and militia in the city during the strike. The maintenance men, operating boilers, engines, pumps, fans, etc., were called out but in some of the collieries these remained at work, in some cases throughout the strike and in some cases for a few days. The coal company officials took the place of the maintenance men who left, and supplies of food, etc., were sent in to them. In spite of this some of the collieries were flooded to some extent. From time to time the loads of supplies and cars of coal for this purpose were held up by crowds or pickets but under police or military protection were finally put through.

The coal miners in other mines in Cape Breton and those on the mainland in Pictou and Cumberland counties refused at first to strike or to vote on the question. On July 3, however, the vote previously arranged for, as to a strike for the 1921 wage scale, was taken, except in Springhill, where the locals refused to vote. In the other localities about half of the union membership voted, the official record being reported as 3,175 in favour of a strike and 2,574 against, a majority of 601 in favour. The coal miners at Inverness, Cape Breton Island, did not strike but sent a protest to the Provincial Government against the working and living conditions of the steel workers at Sydney and asked for an investigation, also protesting against the presence of militia and provincial police.

On July 5, the District Secretary was credited in the press with a statement to the effect that the Industrial Disputes Investigation Act, 1907, did not apply to the strike since it was not a dispute regarding wages, hours, working conditions, etc. 7

On July 6, the President and Secretary of District 26 of the United Mine Workers of America, were arrested by the authorities for circulating false information as to the action of the provincial police, this information appearing in a circular calling upon the coal miners to strike. On the same day newspapers printed a telegraphic message from the International President of the United Mine Workers to the District President ordering the miners back to work and pointing out that the agreements with the mine operators must be carried out.

Protests against the use of militia and provincial police were sent to the Dominion Government by various labour organizations, including the Executive Council of the Trades and Labour Congress of Canada, the latter insisting that an investigation be held, also asking that Parliament be summoned if necessary to take action. The strikers at Sydney asked the railway employees to refuse to move troops and coal but this request was not complied with.

The coal miners in Pictou struck on July 10, some small mines in Cape Breton became involved on July 11, and miners at Drumheller, Alberta, went out on July 12. The President of District 18 of the United Mine Workers of America, covering Alberta and South Eastern British Columbia issued a call for a conference of labour organizations in Western Canada to consider what might be done, but the International President of the organization directed the District President to cancel the call and to order the miners at Drumheller back to work. This order was obeyed and work was resumed in Drumheller mines on July 16.

In the discussion of the strikes attention was drawn not only to the use of the militia and provincial police but to the fact that in the steel strike (as in the strike in February) the usual policy of the union was not followed in allowing maintenance men to remain at work and bank the fires, etc., so that loss of equipment and property might be avoided, and that in the coal strike in most of the collieries near Sydney (as in the strike in August, 1922,) the men operating pumps, fans, etc., were called out instead of being allowed to remain and prevent damage to the mine as was the practice during strikes so long at least as no attempts were made to operate the mines with strike breakers.

On July 11, the District Board replied to the International President regarding his direction that the miners return to work and fulfil their agreement, that the strike was not about the terms of the agreement but against the use of militia and police in industrial disputes and that the International Board had no jurisdiction in Canada in the matter.

On July 11, the District President and Secretary had been released on bail. On the following day the Premier of Nova Scotia reached Sydney and met the strike committee of the steel workers together with the International Vice-President for Canada of the union and later met the officials of the steel company and visited the plant. A proposal to establish a Joint Council was discussed but the negotiations had no apparent result in terminating the dispute. By this time the steel plant was again working in some departments and the officials stated that more men were applying for work than could be taken on; on July 16, the blast furnace and some open hearth furnaces started. It was also stated that coal had been purchased in the United States to fill contracts for coal in Montreal, and could be procured for the coke ovens for the steel plant.

On July 17, the press carried despatches indicating that the International President had revoked the charter of District 25, suspending the officials and appointing the former International Board Member for the District, Mr. Silby Barrett of Glace Bay, President of the provisional district, with instructions to reorganize the district. The text of President Lewis' message as given in the press appears below:

Mr. Daniel Livingstone, care Mine Workers' Office, Glace Bay, N. S., Canada.

"Dear Sir,—Since early in July some 8,000 or more of the members of the United Mine Workers in District 26, have been in a sympathetic strike.

"Not only did this strike interfere with the production of coal in mines working under agreement with the U. M. W. but it resulted in the withdrawal of enginemmen, pumpmen and other maintenance men with resulting jeopardy to property interests.

This strike was admittedly incited, encouraged and conducted by you and your official associates who are members of the executive board of District 26. On July 6, after the situation had been officially drawn to my attention by the formal protest of the British Empire Steel Corporation, Limited, who are parties to the agreement with the U. M. W. in that section, I wired you asking for a statement in connection therewith. On July 6, you wired reply admitting that 9,000 men were on strike attempting to justify the unwarranted abrogation of contract provisions by specious arguments.

On the same date I telegraphed you in behalf of the international union a request that the men on strike be immediately directed to return to work and that provisions be made at once for the full protection of the mining properties.

On July 8 you replied saying that my instructions would be considered at a meeting of the executive board of District 26 on July 10. On July 11 Alexander McIntyre, vice-president of the district telegraphed me that the executive board had declined to accede to my request and that the illegal strike would be continued until its objects were attained.

Notwithstanding the lapse of time, I am informed today that there is still no indication upon your part as president of District 26 nor on the part of your associates in office to terminate the strike and discharge your honorable obligations under the agreement or to heed the instructions of the

international union in pursuance of its laws and policies.

I am not unmindful that it is probably a fruitless task to attempt to reason with you in the midst of your mad adventure, yet in your sane moments you must recognize the course you have been pursuing violates every tenet of our organization. It ruthlessly tramples upon every rule of conduct of our union and constitutes a departure from its every tradition. Your deliberate breach of the existing contract between the miners of Nova Scotia and the union is indefensible and morally reprehensible.

Your assault upon the laws and Dominion governments cannot be countenanced by the union mine workers of America. The official statement of the district executive board that the strike was for political purposes is illuminating and gives additional proof, if such was needed of your true intent. I have in mind that you are a self-proclaimed revolutionist. I am familiar with the constant intrigue between yourself and your evil genius McLachlan and your revolutionary masters in Moscow. I can recall the sentiments which you enunciated at a comparatively small meeting of the international executive board at Indianapolis when with the cold ferocity of a five-year-old defying its mother you announced you were a believer in revolution by force.

No doubt the present strike in Nova Scotia corresponds with your idea of a revolution against the British government and is a pursuance thereof.

In consideration of these strange facts, the international union feels warranted in intervening for the protection of its membership and to permit the discharge of its properly assumed obligations.

You may as well know now as at any time in the future that the United Mine Workers is not a political fanatic who seeks to strike down the established institutions of his Government. Neither can it be used to sustain officers of perverted business morals or individuals suffering from mental aberration such as yourself and the aggregation of papier-mache revolutionists who are associated with you.

By virtue of the authority vested in me by the constitution of the U. M. W. of A., of which I am president and in consideration of the further authority granted in the premises by the international executive board I, herewith, advise that the charter of District 26, United Mine Workers of America, stands revoked, effective this date.

Under this section District 26 ceases to be an entity and you are automatically deprived of your office as president thereof,

Alexander McIntyre, vice-president and J. B. McLachlan, as secretary treasurer likewise have their offices vacated through this same precise action. All members of the executive board of district 26, including any and all other officers of said district are in like manner automatically removed from office and can no longer undertake to represent in any capacity the U. M. W. of A.

This applies with equal force to Alexander Stewart, member of the International Executive Board.

Under separate order I am today creating a provisional district to function within the jurisdiction of former district 26 under the direct authority and control of the International Union.

International representative Silby Barrett, of Glace Bay, Nova Scotia, has been designated as provisional president thereof with sweeping authority to function in every proper capacity.

In compliance with the laws of the International Union, governing such matters you will, together with each of your associating retiring officers, turn over to Mr. Silby Barrett, president of provisional District 26, all monies, official records and documents, together with the district office and furniture and any other property or things of value belonging to former District 26.

President Barrett will hold such property in trust for the future use of the members of our union in that district.

Instructions will be issued to all local unions whose officers are now on strike in Nova Scotia to immediately return to work under the existing arrangement. Local unions continuing in defiance of such order will be summarily dealt with in conformity with the laws of the U. M. W. of A.

This office is today notifying Mr. R. M. Wolvin, President of the British Empire Steel Corporation, Limited, that the international union, through its provisional district 26, is assuming the equity and obligations of the existing joint wage agreement in that territory, as represented by the subsidiary coal companies of the British Empire Steel Corporation.

JOHN L. LEWIS

President United Mine Workers  
of America.

The new District President immediately ordered all miners back to work. The President of the Trades and Labour Congress of Canada announced

that the miners should be loyal to the union and support the provisional district president. International organizers of the United Mine Workers were also sent to Sydney. Between July 19 to 21, several locals voted to return to work and on the 21st the remaining locals in a mass meeting decided to return on July 24. Within a few days the various locals formally, on directions from the provisional district president, voted to call off the strike.

The steel company continued operations and on July 20, 1,825 men were reported working with another blast-furnace started. By the end of July conditions were reported to be not much affected by the strike and on August 1, the steel workers' union formally called it off. On July 26, the provincial police force was reduced, on July 28 the troops began to move away, and by August 15 all troops had been released from strike duty.

## CONDITIONS IN THE ANTHRACITE COAL MINING INDUSTRY IN THE UNITED STATES

### Report of United States Coal Commission

THE United States Coal Commission which was appointed under a law passed by Congress last September has submitted its separate report on the anthracite coal industry as required by the law.

The Commission recommends that the industry should be brought under public regulation by the creation of a governmental authority with power to require financial and operating reports, to prescribe uniform methods of cost accounting and to determine conditions for the shipment of coal in interstate commerce.

#### In the opinion of the Commission

The President of the United States should be authorized by act of Congress to declare that a national emergency exists whenever through failure of operators and miners in the anthracite industry to agree upon the terms of employment or for any other reason there is a suspension of mining operations, seriously interrupting the normal supply of anthracite fuel in interstate commerce; and to take over the operation of the mines and the transportation and distribution and marketing of the product, with full power to determine the wages to be paid to mine workers, the prices at which the coal shall be sold, and, subject to court review, the compensation to be paid to land and mine owners.

The basis of the Commission's recommendation that mining and marketing of anthracite shall henceforth be regarded as affected by a public interest rather than left to the unqualified and uncontrolled operation of the laws of supply and demand under free competition is the fact that there is and can be no such free competition because the supply is limited and controlled.

Nature has given to eastern Pennsylvania a practical monopoly of anthracite, the only other producing region worth noticing being Wales, where a few million tons are mined each year, the greater part of it for export to the continent. The underground reserves of Pennsylvania anthracite are less than fifteen billion tons, about two-thirds of the original deposits. The coal lands are owned by a small number of corporations, estates and individuals, who seldom offer even small tracts for sale and who enjoy the full unearned increment caused by increasing demand and by differential advantages. Ninety per cent or more of the unmined coal is controlled by eight coal companies and affiliated corporations. There is a unified control of mine labour, the entire region being for practical purposes 100 per cent organized for collective bargaining. For better or for worse the fact to be faced today is that wages, hours, and working conditions must be satisfactory to the workers.

Under such circumstances some of the operators who want peace at any price in order to continue their profitable operations fail to insist on exacting from the workers that honest day's work which in the long run is as much in the interest of the workers as it obviously is in the interests of the public.

Together with the land and labour monopoly there is finally a concentration of coal mining in a small group of large companies."

In discussing the price of coal the Commission state that in ten years the price of stove coal has practically doubled, in line with the general advance in commodity prices, but while the prices of other commodities reached their peak at various times from 1917 to 1920, with subsequent declines, the price of anthracite has continued steadily upward. In analysing the various items entering into mine prices the report states:

It is found that all the factors involved in mining costs contribute to the increase in mine prices. In the 10 years under review by the Commission's accounting staff, labour costs in the production of fresh-mined coal have risen from \$1.56 a gross ton in 1913 to \$4.12 in the first quarter of 1923, the cost of supplies from 35 to 71 cents, and general expenses from 32 to 92 cents. Labour cost bears about the same relation to total mine cost in 1923 (71.7 per cent) as in 1913 (70 per cent); supplies cost relatively less in 1923; and the general expenses are relatively higher in 1923.

A number of interesting points were brought out in some sociological studies made by the Commission regarding the composition of the mining population in the anthracite coal fields, their living costs and wage rates. Information relating to the nationality, places of domicile, ages, marital status, etc. of the mine workers was obtained from the original schedules of the census of 1920. Some of the facts deduced were as follows:

The 1920 returns show 147,456 anthracite mine workers. These together with their families number approximately five hundred thousand persons. The mine workers themselves constitute about one-half of the occupied males in the communities in which the mine workers live; and they and their households together constitute about one half of the populations of the counties in which the anthracite coal fields lie. Approximately 90 per cent of the anthracite mine workers live in communities that are independent of the employing companies. They live just as the mass of other Americans live, in free self-governing communities where their civic rights are within their own keeping. Comparatively few of the mine workers live in company-

owned houses, so that they are free to go from one mine to another to work without its having any effect on the tenure of their domicile.

Over 22,500 of the foreign born cannot read any language, so that safety notices or instructions would be meaningless to them; and nearly 10,000 of them cannot speak English and would have difficulty in understanding their foremen unless these spoke their particular language. These figures suggest, therefore, that there has been remissness somewhere in the matter of teaching the foreign born the language of the country, just as there appears also a lack of energy on the part of the various organizations that might properly be looked to in the matter of stimulating their interest in acquiring American citizenship.

With regard to the cost of living the report states:

A list of the food supplies purchased by 550 families for six months last winter (October-March) was obtained from storekeepers' records, and prices of foods on December 15, 1922, were secured from 83 stores patronized by the families of 16,469 mine workers, numbering approximately 100,000 people. The lowest prices were found in the cities of 2,500-10,000 population; the highest in the small mining village, with the cities of Wilkes-Barre and Scranton not far behind. In the small village the winter's supply of food cost 2 per cent more than in the two large anthracite cities; in the towns of 10,000-50,000 it cost 3 per cent less, and in the small towns of 2,500-10,000 it cost 4 per cent less. Compared with prices in Philadelphia and Pittsburgh, as collected for the same date by the United States Bureau of Labour Statistics at stores located among wage-earning population, it was found that it cost something like 10 per cent more in Scranton and Wilkes-Barre than in Philadelphia; 11.4 per cent more than in Pittsburgh; and that in the group of anthracite towns where the prices were lowest they were three and a half per cent higher than in Philadelphia, and 4.8 per cent higher than in Pittsburgh. Retail dealers in the smaller mining villages allowed for higher gross margins in fixing prices than are usually allowed, for example by merchants in Washington, on many items of wearing apparel, notably men's shoes, men's underwear and goods sold by the yard.

Excluding families living in company houses, the prevailing rent in Scranton and in the towns of 2,500-10,000 population was \$10 and \$12; in the cities of 10,000-15,000 it was \$15. These rents are for houses without a bathroom, to secure which adds approximately \$5 a month to the rent, aside from the extra cost of the water connection. As a matter

of fact, however, a bathroom is the exception in the houses offered for rent in the anthracite region, and even if a miner wishes to meet the additional expense he would at present have difficulty in finding a house with it.

In the purchase of coal the mine worker's family had an advantage. The average price paid by them for chestnut coal delivered in Scranton in December, 1922, was \$7.30, and it averaged \$6.71 per ton in cities of from 2,500 to 10,000 population.

Taxes were found to be an appreciable amount in the family expenses of the mine worker. Every adult person in the anthracite region pays a direct tax. An occupational tax must be paid by every miner and a school tax by both the miner and his wife, whether or not they own property. Among the families studied taxes represented about 2 per cent of the total expenses,

The income as well as the expenses of the 712 families interviewed by the agents of the Commission, was secured from the mine worker or his wife and the wages of the mine workers were checked against the payroll.

The prevailing household was one of six members—usually four children with the father and the mother, but sometimes three children with an adult relative or a boarder. Half the families were dependent entirely on the father's earnings in or about the mines, while the other half had some additional income either from boarders or from earnings outside the home by other members of the family. About a quarter took boarders. The custom of turning the weekly pay envelope over to the mother prevailed in most of the families, and in all but a few cases, therefore, the earnings of the various members of the family were spent or distributed by her for the benefit of the family as a whole.

The average income from all sources was approximately \$176 per month; 41 per cent had as much as this or more; 59 per cent had less. Nine families, or 1.2 per cent of the total families visited, had an average monthly income during the six months of less than \$75; forty-seven families, or 6.6 per cent, had from \$75 to \$100; ninety-nine families, or 14 per cent, had from \$100 to \$125; one hundred and twenty-seven, or 17.8 per cent, had from \$125 to \$150; one hundred and thirty-seven, or 19.2 per cent had from \$150 to \$175; one hundred, or 14.1 per cent had from \$175 to \$200; and one hundred and ninety-three, or 27.1 per cent, had \$200 or over.

A description is given of the various classes of workers employed in mines as follows:

Pick and machine miners, together with their assistants, are paid on a piece-rate

basis and are what would be termed in other industries *piece workers*. In this report they are referred to as either *contract men* or *tonnage men*. While some contract miners are paid by the *car* and others by the *yard*, instead of by the *ton*, they are all grouped together under the term *tonnage men*. Every colliery has some miners, employed in various kinds of work, who are paid by the hour and not by the piece. These are called *company miners*, and are included under day workers, and not under tonnage or contract men.

There is a third class of miners, 'between the contract miner and the company miner. These are contract miners who because of abnormal conditions in their working places have been placed temporarily on a day rate, usually somewhat above the day rate of company miners. The rates at which they are paid are known locally as consideration rates and these miners are called consideration miners during the time they are on the day rate. But as ordinarily they are on a day rate for a comparatively short time and go back to their contract rates as soon as conditions in their working place become normal, their earnings on the whole represent the earnings of piece workers rather than day workers.

Most miners employ a *labourer* who is an employee of the miner and not of the company. These labourers load the coal blasted down by the miner, assist him in his work, and are employed, disciplined or dismissed by the miner. They usually are paid a percentage of the miner's earnings. The miner turns in a statement of the amount due his labourer and this amount is deducted by the company from the miner's earnings and paid to the labourer directly by the company. The miner's labourers are piece workers and are included under the general term *contract men* or *tonnage men*. Practically all the other employees around the mines are paid by the day or hour and are, therefore, time workers. These time workers are referred to sometimes as *day men* but more frequently as *company men*.

All contract men, or tonnage men, are underground workers. *Company men*, or *day men*, are subdivided into inside men and outside men, according to whether their working places are underground or on the surface.

An analysis of wage rates of miners paid by the day or hour shows a large increase since 1902 with the basic figure of 100 for the wage rates of 1903, the relative rates for outside labourers on April 1, 1923, being from 338 to 404 and for company miners from 259 to 299. The relative rates of contract miners rose from 100 on April 1, 1902 to 213.6 in 1923. There has also been an im-

provement in earning power due to increased opportunities for work. In the decade 1890 to 1899 the average days worked per year by anthracite miners amounted to 183; in the decade 1900 to 1909 the average was 190, and in the decade ending in 1919 the average was 254. For the six years ending with 1921 it was 273, approximately 90 per cent of a full working year. In 1921 about 40 per cent of the employees worked in mines that operated 290 days or over.

A study of the labour turnover was made from reports of 127 mines and 10 washeries located in the three fields and representing 40 per cent of the total production. It was found that there was a wide range in the turnover rate both among collieries and among groups of employees. In the Lehigh region in 1921, 71 men out of each 100 in the working force remained in the employment of the same company throughout the year, while 55 persons were required to fill the remaining 29 positions. In the Wyoming region 58 per cent remained with the same employer and 100 men were required to fill the remaining 42 positions. In the Schuylkill region 54 per cent remained with the same employer and 115 men were required to fill the remaining 46 positions.

With regard to hours of labour, the commission state that while a general eight-hour day was established in the anthracite industry by agreement in 1916, there are still a considerable number of employees working nine or more hours per day, 148 collieries reporting 907 who worked nine hours or more and some as much as twelve hours or more. The Commission consider there is no justification in employing men on shifts of twelve hours or more.

In discussing the living conditions of the anthracite miners the Commission say:

The miner's work is severe while it lasts, and it influences the character of the recreation and amusement which he seeks when he is free from it.

The domestic life of the mining population has of course all the lights and shadows of any large number of families. It is no longer a submerged or exploited population, what ever may have been true of the period before 1900, when the series of wage increases described elsewhere in this report began. The earnings of full-time workers set forth in the tables of the appendix certainly permit the essentials of a reasonable standard of living. Those who take full advantage of their opportunities to earn in the various occupations connected with the industry and are not handicapped by serious misfortune need not suffer for shelter, food, clothing or other decencies or comforts of life, even without supplementary earnings of wife or children.

On the other hand, many of the families of the miners' helpers or labourers have a very uncertain and inadequate income. These families, often large, are frequently in economic distress. District nurses and social workers are frequent callers at their homes. The scarcity of labour, which the Commission has elsewhere called the limiting factor at the present time in the production of anthracite, is precisely in this class of labour. The connection is obvious between the irregular and low earnings and the supply. The industry and the public are especially interested in this aspect of the wage problem for the reason that miners' helpers are the only ones who can get the experience and training to become qualified and certificated miners, and if their wages and conditions of employment are not such as to recruit the right type of men, the future supply of miners is unfavourably affected at its very source.

Operators and unions have the remedy in their own hands. Some adjustment of wages and of the terms of employment which will bring larger and more assured incomes to these labourers is the first step in increasing their number and efficiency. To increase production is not the only or main reason for this readjustment, but if it has that effect consumers of anthracite will have no reason to complain.

The impression which a fair-minded and sympathetic observer in the anthracite region will gain is of drab and bleak exterior conditions, imposed not by lack of earnings or incomes but by the very character of the industry. The communities are not without electric lights, water supply and sewer systems, or churches, schools, libraries and playgrounds, although a considerable part of the population are less supplied with such facilities of community life than is desirable and less than the prosperity of the industry as a whole would permit, if public spirit and civic respon-

sibility were aroused and directed toward supplying the deficiencies.

While the Commission found that the anthracite operators were receiving much larger profits at present than they did before the war, they were not yet in a position to say that the present margin of profits was too great. On this point they say:

Until the total earnings can be compared with the total investment, the public should withhold judgment as to the profits received by the anthracite industry. It may be that judged by this standard, the margin obtained before the war was too small. If, on the other hand, the pre-war margin was adequate, the present margin may be unduly large, unless in the meantime there has been a marked increase in the investment. The task has proved so involved and far-reaching that the findings of the Commission on the subject of the profits of anthracite companies are reserved for a later report.

Whether the peculiar corporate organization of the anthracite industry has been helpful or harmful to the public turns in the last analysis on whether its profits have been reasonable. The fact of an economic concert amounting to combination is established beyond reasonable doubt. Its capacity for public service is demonstrated. The point upon which the public demands explanation is whether or not it has used its monopoly power to extort exorbitant profits from the consumer.

The Commission state that insufficiency of the available supply of anthracite is the acute problem of the moment and the serious problem of the future.

The conclusions of the engineering staff point to a decline in colliery capacity during the past ten or twelve years. Nor, with one exception, is there now in progress any new mine development of consequence to offset the normal reduction in capacity by wearing out of plant or mining out of reserves. The observations of the engineers, however, are in line with the labour studies to the effect that the present deficit in labour is a shortage of miners' labourers rather than of miners themselves, so that at present the limitation of capacity cannot be charged to the Pennsylvania requirement of certification of miners.

This shortage of labourers is not one over which the operators have no control. It is pointed out that other industries employing similar labour have increased their forces, and it therefore

appears that earnings and conditions of labour offered by the anthracite industry have not attracted labour in the same degree as have the wages and conditions offered by other industries.

The Commissioners note certain factors which tend to decrease the coal production per man employed underground. Chief among these are the constant decrease in thickness of beds worked and the increase in depths of working, both items making for increased mining costs.

Nor is the outlook encouraging when it is realized that the Northern field, in which the mines yield 70 per cent of the domestic sizes, is being exhausted much more rapidly than the Southern field, where the mines yield only 53 per cent of the domestic sizes. At the present time the average mine worker in the Northern field produces nearly 30 per cent more domestic coal than the mine worker in the Southern field. Yet it is from this Southern field with its greatest reserves that the future supply of domestic anthracite must come in increasing degree.

As to the extent to which loss in labour efficiency has tended to reduce productivity the Commission say:

That there is some tendency to limit each man in the amount of coal to be mined and loaded in accordance with local feeling and tradition is not seriously denied. The introduction of labour-saving or product-increasing machinery although not opposed by the miner in principle, gives occasion for vexatious and expensive delays in discussion over the conditions under which it is to be used, the rates of pay, the number of men on a machine, etc.

For the purpose of effecting economies in the use of anthracite the recommendation is made that the standard sizes of coal be reduced from seven to four and that the producers join in an inter-company inspection service with power to prescribe standards, inspect and sample shipments, reject inferior coal and certify, if not guarantee, the quality of coal passed. If this proposal is not accepted, or should not in practice effect the desired purpose, the recommendation is made that a Federal law be enacted for permissive grading and inspection.

In discussing industrial relations, in view of the pending negotiations between the anthracite operators and the United Mine Workers of America, the following recommendations are made.

(1) The Commission recommends that in the next agreement there should be a provision for a continuing umpire, and that he or an assistant named by him should sit with the Conciliation Board at all its meetings, but without a vote.

(2) In view of the delays that have been caused by the absence of members of the Conciliation Board, alternates of like standing in the industry should be selected with authority to act in the absence of the original member.

(3) The operators' group should appoint a full-time representative and all necessary assistants to consider jointly at the mine with the district officers of the union each case before it is appealed to the Conciliation Board in the hope of securing a local agreement, arriving at a better understanding by each side of the difficulties and problems of the other, and thus producing a mutual feeling of respect for the other's opinions and each obtaining the outlook of the other upon the problems.

(4) So many changes have taken place since 1903 that the agreement should provide for a joint committee to work out a restatement of the whole agreement in the terms of today, and this agreement should be specific enough to be the code by which all persons having anything to do with the settlement of grievances shall be bound.

(5) If the Board of Conciliation does not clearly understand the facts involved in any case, it should appoint an examiner from each side immediately to investigate and furnish it with all the facts.

(6) The agreement should provide for penalties for the breach thereof by either party, and the method by which such penalties are to be enforced.

(7) The renewed agreements have too rigidly retained the practices and conditions of 1902 and have not had adequate flexibility. An industry which is necessarily constantly changing cannot tie itself inflexibly to conditions of twenty years ago without hampering the management and working injustices to miners. A second joint committee should be provided for in the next agreement and directed to make an engineering study of the elements of the job of mining anthracite coal, for the purpose of building up a scientific and equitable basis for rate making. Until, however, such committee shall disclose fundamental

facts, which shall form a decidedly better basis, the old 1903 base should, of course, be retained, for however inequitable the basis of 1903 with its subsequent modifications is, it is better than no basis at all.

(8) The expiration of the contract in the anthracite region should not coincide with the expiration of that in the bituminous region. The contract should run for a definite period of time with the proviso that it shall be deemed to be renewed for a like period of time except as to such provisions thereof in which notice of a desired change shall have been given by either party to the other at least ninety days before the renewal date. Upon these proposed changes the parties shall immediately confer and if, sixty days before the date fixed for the renewal of the contract, they have been unable to agree, they shall report such fact to the President of the United States, specifying clearly the controverted points. The President shall thereupon appoint a person or persons to inquire into and make public a report upon all the relevant facts in controversy before the date of such renewal shall have arrived.

On July 27 negotiations between the anthracite coal mine operators and the United Mine Workers of America were broken off, the point at issue being the refusal of the operators to agree to the "check off" system for the collection of union dues. On August 8, as the deadlock still continued, the coal commission issued a supplementary report dealing with the existing situation. The recommendation of the previous report was renewed, that the President should have the power to intervene if a new agreement could not be reached before the expiration of the old one, and also the recommendation that the dates of the expiration of the anthracite and bituminous agreements should be set far apart. The more important causes of trade disputes are discussed in the report. With regard to union membership the report says:

"What practice should obtain in respect to union membership under a collective bargaining agreement is a debatable question... But any answer which relieves the union of responsibility for maintaining itself, and thus divorces the question of membership from the services rendered, is bound to be harmful to the union, not to mention the

other interested parties. Unions like other institutions slip easily into arrogance and incapacity when existence is made too easy. Such a condition is sure sooner or later to make them a prey to attack both within and without."

In response to an urgent appeal addressed to representatives of the operators and the United Mine Workers by the Commission negotiations for a new agreement were resumed on August 20.

---

## ABOLITION OF TWELVE-HOUR DAY IN UNITED STATES STEEL INDUSTRY

IN the spring of 1922 the late President Harding called a conference at Washington of the heads of the steel industry of the United States, at which he requested them to consider the possibility of the abolition of the twelve-hour day in the steel industry. In compliance with this request, a Committee was appointed by Judge Gary, President of the American Iron and Steel Institute, at the annual meeting of the Institute last year, to investigate this matter. The Committee presented its report at the annual meeting of the Institute on May 25 of the present year. The Committee claimed that the twelve-hour day was not injurious to the worker; that there was less fatigue from the work of the twelve-hour day in the steel industry than pertained to the large majority of the eight-hour men because there were more rest periods during the twelve hours on duty. It was also estimated that if the twelve-hour day were abandoned it would increase the cost of production about 15 per cent, and there would be needed at least 60,000 additional employees. It was claimed that there had been a consistent and successful effort to reduce the number of men employed twelve hours a day during the time when labour was more plentiful. The report concluded as follows:

If labour should become sufficient to permit it, the members of this Committee would favour entirely abolishing the twelve-hour day, provided the purchasing public would be satisfied with selling prices that justified it, and provided further that the employees would consent and that industry generally, including the farmers, would approve.

On June 18, President Harding asked the directors of the Iron and Steel Institute to give him a pledge that they would abolish the twelve-hour day when conditions of labour warranted that course. In their reply on June 27 the directors said in part:

Undoubtedly there is a strong sentiment throughout the country in favour of eliminating the twelve-hour day, and this we do not underestimate. On account of this sentiment, and especially because it is in accordance with your own expressed views, we are determined to exert every effort at our command to secure in the iron and steel industry of this country a total abolition of the twelve-hour day at the earliest time practicable. This means the employment of large numbers of workmen on an eight-hour basis and all others on a basis of ten hours or less without an unjustifiable interruption to operations.

On July 6, Judge Gary, as Chairman of the United States Steel Corporation, announced that the eight-hour day would be put into effect as soon as practical. During that month a careful study of the whole subject concerning the elimination of the twelve-hour day was made by the Executives of the Corporation, and on August 2, after a meeting of the directors of the American Iron and Steel Institute, the following statement was given out by Judge Gary:

Following the correspondence between President Harding and the Steel Institute, and as a result of the most painstaking investigation, manufacturers of iron and steel, representing substantially the entire industry of the country, will now begin the total elimination of the twelve-hour day and

will progress as rapidly as the supply of labour will permit.

It is impossible to say when the changes will be completed. It will depend upon labour conditions as respecting plants. There will be unnecessary delay on the part of any one.

Where the hours of employees connected with continuous processes? are reduced from

twelve to eight hours, their wage rates will be so adjusted as to afford earnings equivalent to a 25 per cent increase in hourly and base rates.

All other workmen will be on ten hours or less and their present hourly and base rates will be continued; but whenever it is practicable by promotions or changes in positions, the daily earnings will be adjusted.

## REPORT OF THE BRITISH COLUMBIA DEPARTMENT OF LABOUR FOR 1922.

THE Department of Labour of British Columbia came into existence in 1918, and its fifth annual report, covering the operations of the year 1922, shows that the Department is already closely associated with the industrial life of the Province. Each year fuller statistical accounts have been given in regard to the total payroll, rates of wages, nationality, fluctuations of employment and working hours of the people employed in the various occupations. Last year returns were received from 2,809 employers, through whose co-operation and good will it is possible to render this important service to the Province and its industries. The salaries and wage payments made by the firms reporting during the year were as follows:—

Officers, superintendents and managers. . . . .	\$ 7,730,625
Clerks, stenographers, salesmen, etc. . . . .	7,137,149
Wage earners, including piece-workers. . . . .	71,324,416
	<u>\$86,192,190</u>

An analysis of the figures and of those of the previous year shows that while the number of firms reporting for 1922 increased by 22½ per cent, their aggregate payroll increased rather less than 9 per cent. This discrepancy is explained partly by the fact that the employers who were reporting for the first time in 1922 were mostly the smaller firms, and also partly by the fact that in most in-

dustries wages during 1922 showed a reduction as compared with 1921. It is calculated that the total industrial payroll of the Province would have been increased by about \$100,000,000 if it had been found practicable to include the various railway systems in the Province in the survey.

Among the important industries which showed a larger payroll in 1922 than in 1921 was the lumbering group, which began to show signs of recovery after two years of depression, the outlook at the beginning of 1923 being distinctly better than at any time since the spring of 1920. The building and contracting industries also improved their payroll by 40 per cent over the previous year, while coal mining more than held its own in spite of the closing down of the mines in the Fernie area for nearly five months owing to a strike. The fish canneries had a moderately prosperous year, while metal mining and printing and publishing showed a slight advance.

The conclusion reached in the report in consequence of the general survey of wages in the Province during the year is that the general decline which was so marked between 1920 and 1921 was carried further in 1922, but whereas the latter decline was nearly 12½ per cent, the decline between 1921 and 1922 was only 2¼ per cent, and there is good

ground for believing that the present year will show an upward tendency in wages. While many of the minor industries showed decreases in 1922, the low-water mark in the basic industries, such as lumbering, coal mining, food product manufactures, and the pulp and paper industry, was evidently touched in 1920, with the doubtful exception of coal mining.

The average weekly wage rate for adult males in some of the principal industries is shown in the following table:

AVERAGE WEEKLY WAGE IN SEVERAL INDUSTRIES (adult males)

INDUSTRY	1919-10	1921	1922
	\$	\$	\$
Breweries .....	28.27	28.67	26.62
Builders materials .....	31.65	28.82	25.61
Cigar & tobacco .....	32.48	23.97	25.30
Coal mining .....	37.64	32.83	33.61
Contracting .....	31.61	28.82	28.06
Explosives, chemicals .....	31.53	26.34	26.13
Food product manufactures .....	29.72	25.67	27.39
Garment making .....	36.14	29.38	27.28
Lumber industries .....	32.47	24.70	25.29
Metal trades .....	31.14	30.33	27.73
Metal mining .....	35.96	32.00	30.97
Oil refining .....	28.52	35.73	32.63
Paint manufacture .....	27.23	24.14	21.79
Printing and publishing .....	35.79	36.30	36.23
Pulp and paper .....	35.18	25.41	25.88
Ship-building .....	28.11	29.87	25.55
Smelting .....	36.44	31.98	29.91
Street railway, gas, water, power, telephones, etc. ....	32.81	29.66	30.41
Wood manufactures (Not el- sewhere specified) .....	27.46	23.48	23.12

The general average industrial wage per week for 1922 was the lowest for the past five years, the figures being as follows:—

1918 (January to July) .....	\$27.97
1918-19 .....	29.11
1919-20 .....	31.51
1921 .....	27.62
1922 .....	26.98

The average number of wage earners in all industries in the Province in 1922 ranged from 45,403 males and 3,215 females in February to 59,250 males and 4,125 females in October.

The following table shows the numbers of wage earners receiving specified amounts in the week of greatest employment.

CLASSIFIED WEEKLY WAGES-RATES  
(Wage-earners only)

For week of employment of greatest number	Males		Females	
	18 yrs. and over	Under 18 yrs.	18 yrs. and over	Under 18 yrs. Apprentices
Under \$6.00 .....	9	49	2	9
\$ 6.00 to 6.00 .....	7	47	2	9
\$ 7.00 to 7.99 .....	18	56	7	17
\$ 8.00 to 8.99 .....	49	80	17	36
\$ 9.00 to 9.99 .....	79	128	28	62
\$10.00 to 10.99 .....	229	161	92	81

\$35.00 to 39.99 .....	7,105	4	15	.....
\$40.00 to 44.99 .....	3,203	1	3	.....
\$45.00 to 49.99 .....	1,651	.....	.....	.....
\$50.00 and over .....	1,414	.....	.....	.....

In regard to working hours the tendency in the past year was in the direction of longer hours, the average working week for all industries in 1922 being 51.15 hours, compared with 50.41 hours in 1921 and 50.96 hours in 1920. The industrial group with the longest average working week namely 55.87 hours was that of smelting, in which industry there is continuous operation for a seven day week with three shifts of workers and a legal maximum working day of 8 hours. The shortest average week was worked in cigar and tobacco manufacturing, namely 44.2 hours.

As the oriental question is one of the main problems of British Columbia it is satisfactory to find that the returns for the last five years show a declining percentage of such workers in the Province. The arrangement between the Employment Service and the Department of Immigration, whereby aliens are pre-

vented from entering the Province except when suitable persons cannot be found in Canada to fill vacancies, is declared to have worked satisfactorily. Many applications for permission to import aliens were refused, aliens illegally in Canada were deported, and the positions in which they were employed were filled by Canadians. In many industries, however, it was found impossible to secure help in Canada for certain

work requiring special technical knowledge.

A considerable part of the report is concerned with the continued efforts of the Department to grapple with the unemployment problem. It is stated however, that "during 1922 there were welcome signs that the cloud was lifting and at the beginning of 1923 the business weather chart is pointing very definitely towards a revival".

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports by the Dominion Bureau of Statistics on (a) Central Electric Stations 1921; (b) the Flour and Grist Milling Industry, 1921; (c) Bread and other Bakery Products, 1921; (d) the Automobile Industry, 1922.

THE Dominion Bureau of Statistics has recently issued reports for the year 1921 on central electric stations in Canada, the flour and grist milling industry, and the bread and other bakery products industry, as well as on the automobile industry for 1922. Previous reports in this series relating to the various industries were outlined in the June issue of the LABOUR GAZETTE and in various other issues.

### Central Electric Stations in Canada during 1921

For the purpose of statistics, the central electric stations are divided into two general classes: (1) commercial or privately operated stations, and (2) municipal, or those operated by provincial commissions, municipalities and public institutions. These two classes are divided into (1) non-generating, those buying all the electric energy they resell, and (2) generating, those which generate all or a portion of the current they sell. The generating stations are again sub-divided into (1) hydraulic, those using water-power as a primary power, and (2) fuel, those generating electricity by steam engines or internal combustion engines.

The total number of stations in Canada in 1921 was 857, an increase of 38 over the previous year and of 191 during a five-year period. Of these 377 were commercial and 480 municipal stations; 259 were hydraulic stations, 251 were fuel stations and 347 were non-generating stations. Compared with the previous year there were two less commercial stations and 40 more municipal stations. The increase in 1921 included 34 non-generating stations, 3 fuel generating stations and one hydraulic station. The non-generating stations under the jurisdiction of the Ontario Hydro-Electric Power Commission accounted for 21 of the increase in non-generating stations, but some of these had been commercial generating stations during 1920, three generating stations in Manitoba were changed to non-generating stations under the Manitoba Power Commission, while that commission also opened two new non-generating stations. Over 97 per cent of the total output of all stations was generated by hydro-electric stations.

The total capital employed in the industry, including the value of lands, buildings, equipment, materials and cash and other current assets, amount-

ed to \$484,669,451, being an increase over 1920 of 8 per cent, and since 1917 of 36 per cent. By far the greatest increase has been in municipal stations, which showed a total capital of \$73,185,673 in 1917 and \$157,229,624 in 1921. Over 84 per cent of the increase was accounted for by municipal stations in Ontario, although substantial increases were recorded in all provinces.

The total expenditures for 1921 amounted to \$47,044,503, of which \$15,234,678 was for salaries and wages, \$3,024,930 for fuel, and \$28,784,895 for miscellaneous expenses. There was \$24,943,355 expended for the commercial stations and \$22,101,148 for the municipal stations. The fuel bill showed

a decrease compared with 1920 of \$165,286, or over 5 per cent. The total expenses, however, showed an increase of 4 per cent. Wages increased 4 per cent over 1920, but compared with 1917 the increase was 96 per cent.

The total number of persons employed in 1921 was 10,714, an increase of 21 employees over 1920, and of 21 per cent over 1917 which was entirely in municipal stations where the number employed increased from 3,712 to 5,595 and the number of stations from 343 to 480.

The following table shows the number of stations, capital employed, salaries and wages paid and the number of persons employed by provinces during 1921:

Province	Stations	Capital	Salaries and wages	Employees in commercial stations	Employees in municipal stations	Total employees
	No.	\$	\$	No.	No.	No.
Prince Edward Island.....	11	502,488	32,214	23	5	81
Nova Scotia.....	48	5,451,899	476,104	305	80	385
New Brunswick.....	29	4,524,647	256,678	211	46	257
Quebec .....	145	166,426,988	3,016,295	2,145	229	2,374
Ontario .....	377	218,416,235	7,642,306	1,498	3,811	5,309
Manitoba .....	34	22,010,612	1,181,561	168	574	742
Saskatchewan .....	89	7,892,735	634,490	52	370	422
Alberta .....	59	13,150,843	746,189	140	301	441
British Columbia.....	61	45,023,886	1,213,754	552	179	731
Yukon .....	4	1,269,063	35,087	22	.....	22
	857	484,669,451	15,234,678	5,119	5,595	10,714

Of the total number of employees 1,338 were officers and superintendents, 3,282 were clerks and other salaried employees, and 6,094 were employees on wages. In the commercial stations, 983 were employed at non-generating stations, 4,136 at generating, 3,399 at hydraulic and 737 at fuel stations. In municipal stations, 3,305 were employed at non-generating stations, 2,290 at generating stations, 1,333 at hydraulic stations, and 957 at

fuel stations. There were 4,288 employees at non-generating stations and 6,426 at generating stations, of which 4,732 were in hydraulic stations and 1,694 were in fuel stations.

The gross revenue earned was \$73,376,580, an increase of 11 per cent over the revenue for 1920, and of over 64 per cent in the past five years. The total cost of electric energy purchased by stations during 1921 was \$15,104,-

958 leaving a net revenue received from consumers of \$58,271,622 for 5,614,132,000 kilowatt hours plus a small amount not metered. This gives an average revenue from consumers of about one cent per kilowatt hour for all purposes, the average lighting rates would be somewhat higher and the power rates somewhat lower. The total number of subscribers during the year was 973,212.

### The Flour Milling Industry during 1921

The report of the Dominion Bureau of Statistics on the flour milling in-

dustry of Canada during 1921 covers the operations of 1,257 plants, of which 640 were situated in Ontario, and 372 in Quebec. Of these plants 675 were chopping mills and 582 were flour and grist mills. In 1920 there were 1,332 mills in operation, of which 617 were in Ontario and 457 in Quebec. The report contains also a historical survey of the industry and the principal statistics for the years 1917 to 1921 inclusive.

The following table contains some of the principal statistics by provinces for the calendar year 1921:

Provinces	No. of mills reporting	Capital	Employees on salaries	Salaries	Employees on wages	Wages	Cost of materials	Gross value of products
P. E. Island.....	26	\$ 136,540	.....	\$ .....	26	\$ 11,802	\$ 205,121	\$ 237,744

\$50 and over.....	12	.....
Total .....	4,796	160

A classification of employees according to their weekly wage earnings as at December 15, 1921, is shown in the preceding column.

#### Bread and other Bakery Products during 1921

The report of the Dominion Bureau of Statistics on the bread and other bakery products industry in Canada during 1921 is distinct from that of the biscuit and confectionery industry, yet it shows a small quantity of both biscuits and confectionery as having been manufactured during the year. The number of individual plants reporting during the year was 1,658, of which 729 were in Ontario, 518 in Quebec, and 101 in British Columbia and the Yukon Territory.

The principal statistics for the year are included in the following table:

Province	No. of plants	Capital	Employees	Salaries and wages	Cost of materials	Value of products
		\$		\$	\$	\$
Prince Edward Island.....	7	18,231	18	13,156	43,666	78,112
Nova Scotia.....	33	400,611	202	172,015	576,742	958,662
New Brunswick.....	35	259,083	163	148,419	466,237	801,331

Manitoba .....	70	1,465,192	655	870,969	1,910,742	3,723,376
Saskatchewan .....	73	837,163	295	281,302	750,772	1,380,475
Alberta .....	92	1,442,463	420	552,692	1,329,340	2,602,410
British Columbia *.....	101	1,155,493	632	876,545	2,032,347	3,636,521
Total .....	1,658	23,551,215	9,773	11,290,553	29,202,936	51,367,917

\*Includes-British Columbia 99 establishments, and Yukon 2 establishments.

As compared with 1920 there was a decrease of 111 in the number of bakeries reporting and of \$61,439 in the capital investment. The number of persons employed on salaries and wages decreased by 167 and in the amounts paid to all classes of employees there was a decrease of \$231,903. The cost of materials used in the industry dropped from \$38,239,135 in 1920 to

\$29,202,936, notwithstanding that the quantity of flour purchased had risen from 2,396,800 barrels in 1920 to 2,483,303 barrels in 1921. There was also a decrease in the value of products amounting to \$10,432,716, which is almost wholly accounted for by the drop in the cost of materials used, that prevailed almost throughout the entire list.

Table Number I shows the number of employees by sex and the amount paid in salaries and wages.

TABLE No. I

Classes of employment	Number of employees		Salaries and wages
	Male	Female	
Salaried officers of corporations .....	155	8	\$ 381,539

Table Number II presents the number of employees by sex classified according to their weekly earnings as on December 15.

### The Automobile Industry during 1922

Statistics of the automobile industry for 1922, issued by the Dominion Bureau of Statistics show 15 plants in operation as compared with 14 in the previous year. The total value of the output was \$81,956,429 or \$14,906,220 greater than in the preceding year, although \$19,509,417 lower than the corresponding figures for 1920. The number of automobiles manufactured in Canada during 1922 exceeded all previous records and reached a total of 101,007, or 7 per cent more than the maximum production of former years attained in 1920 and 53 per cent more than the output in 1921. The largely increased production was reflected in the employment record, the number of wage earners employed rising from a monthly average of 4,429 in the previous year to 6,043 in 1922.

Table Number III gives some of the principal statistics of the automobile industry during the years 1917-1922.

The average number of wage earners engaged in the automobile industry by months during 1921 and 1922 is shown in table Number IV.

## MOTHERS' ALLOWANCES IN ONTARIO

### Second Annual Report of Board for year 1921-22.

THE second annual report of the Ontario Mothers' Allowances Commission, covering the fiscal year from November, 1921 to October, 1922, inclusive, shows a large expansion in the work of the Board over that of the preceding year. This growth results partly from the fact that the first year's operations were naturally tentative, but more particularly from the amendments made to the Act in 1921, the Act, as amended, now providing benefits not only for mothers with two children under 16, but also for mothers with one child under 16 years of age and an incapacitated husband, or with one child, under 16 years and an incapacitated child over 16 years; also for the wives of men who have not been heard of or from for at least five years; and for foster mothers. All beneficiaries in towns of 10,000 population or over are now granted allowances on the basis of the rate which formerly applied to cities only, that is \$40 a month for the two children, increasing \$5 monthly for each additional child under 16 years of age. An intermediate rate, which is less by \$5 than the city rate, has been established for beneficiaries resident in centres of population between 5,000 and 10,000, while the county rate, that is, \$30 monthly for two children, with an additional monthly allowance for each child under 16 years of age, is paid to all other beneficiaries.

The whole of the administration expenses are borne by the province, the entire contribution made by the municipalities being paid to the beneficiaries. When a beneficiary has lived for at least one year continuously in a municipality before making application, that municipality is chargeable

with 50 per cent of the amount of benefits, but where beneficiaries move their residence the municipalities concerned share the indebtedness. Administration costs were reduced during the year to 5.42 per cent, and it is hoped that a further reduction to 4 per cent will be effected during the current year.

The number of beneficiaries or "mothers" at the close of the financial year was 3,559, the average benefit paid to each being \$35.50. The total amount of benefits paid during the year was \$1,382,138. The number of widows who were in receipt of allowances was 3,008; wives whose husbands were incapacitated numbered 274; wives whose husbands were in asylums, 99; wives deserted for five years or more, 112; foster mothers, 66. In connection with family desertion it is pointed out that family desertion is now an extraditable offence between the United States and Canada. The Commission suggest as a further step in the solution of this serious problem, that the deserting father, who is now brought back at public expense, should be compelled to work at remunerative employment in prison or out of prison, and his wages applied to the support of his family. The number of children in the families of beneficiaries was 10,922.

Considered by nationality the beneficiaries were mostly Canadians, these numbering 2,515 out of 3,559, English being second with 582, Scottish third with 162, United States fourth with 76, and Irish fifth with 72. Nearly half, or 1,576, of the beneficiaries are described as of "no employment". Of the others, the largest occupational group was charwork, in which 932 women were employed; 306 kept boarders; 248 engaged in sewing;

knitting, etc.; 184 worked in factories; 107 on farms or in fruit picking; 104 as clerks; 60 in business; 33 as nurses; and 9 in professions.

Tuberculosis continues to reveal itself as a source of serious economic waste, approximately 10.22 per cent of the total budget for Mothers' Allowances in 1922 being incurred in consequence of this disease.

Among the general social benefits which may be attributed to Mothers' Allowances the report claims a decided improvement which is noted in some districts since the passing of the Act, not only of the children of beneficiaries but among other families, through renewed interest and emulation. Continued improvement in the general health of the families of beneficiaries is also shown, the mothers giving evidence of

the good effects of shorter working hours, and in many cases of more healthful employment, and the children benefiting from proper nourishment and from their mothers' direct care. Many cases have been reported during the past year in which housing conditions have shown remarkable improvement; families which had been living in one room secured three or four rooms, and in almost every home new furniture was added and other improvements made in comfort and appearance. Many children have been brought home to their mothers from orphanages and other institutions after long periods of separation and in practically every family visited by the officers of the Commission a decided change for the better is observed in the manners and conduct of the children and in the mothers' standard of housekeeping.

## MINIMUM WAGE LAW ADMINISTRATION IN BRITISH COLUMBIA

### Annual Report of Board for 1922

THE fifth annual report of the Minimum Wage Board of British Columbia, covering the operations of the year 1922, forms part of the Annual Report of the Department of Labour of the Province for that year. In addition to the usual statistics showing the number of female wage-earners affected by each of the Board's Orders, their average weekly wages and hours of work etc., the report contains an instructive account of the experience of the Board in administering the Minimum Wages Act, the difficulties to be surmounted in giving effect to Orders, and the benefits derived by the employees from the fixing of minimum wage rates.

Among the difficulties which are mentioned is the general unwillingness of the workers to have their identity known in connection with any com-

plaints. Informants insist on having their names suppressed, refuse to appear at inquiries when called upon, or write anonymous letters, which have to be ignored. In some cases during the past year the Board's action toward employers who were not complying with orders, was prompted by information from outside sources, or if information was supplied by the employee it was not given until she had left the employment in question. Special difficulties also arose in connection with piece rates, some employers finding it necessary to dismiss workers who in their opinion were not earning an amount equal to the minimum wage, and to obtain more competent or rapid workers. In general, however, it is declared that "it would be surprising indeed to find any community where a minimum wage for women has been

enacted, in which the total number of female wage earners has not increased after the passing of such an act." The subject of piece rates involves considerable technical or expert knowledge, and the report appears to indicate that finality has not been reached in this direction.

Attention was given during the year to cases of evasion of the law by employers, and in nearly every case the Board was able to secure for underpaid employees the amount that their wages fell short of the legal minimum, this amount being recoverable as a civil debt. A tendency to evade the law was evident in respect to working hours. In each of the Orders issued by the Board a maximum number of working hours is specified, with a margin in some industries for overtime, for which extra payment must be made. The most numerous infractions were found in hotels and restaurants, especially in the smaller towns and in country districts. The Order relating to this industry defines the working week as 48 hours, with an extra four hours for overtime; but it was found in some cases that a period of 56 hours, or eight hours daily on seven days a week, was being worked. The intervention of the

Board, however, secured a more general recognition of the workers' right to one day's relief from duty in the week. The great majority of the cases of delinquency were settled privately, action in Court being taken only in exceptional cases.

Two of the Orders made by the Board came under review during the past year. One of these, relating to the fruit and vegetable industry, stipulated a minimum wage for experienced help of \$14 a week. Application for a reduction in this rate was made in March by fruit packers and canners, and conferences were held by the Board at Kelowna and Vancouver, with the result that the existing minimum rate, namely, \$14 for a week of 48 hours, was confirmed. Consideration was also given to the rules laid down as to the employment of girls under 18 and of inexperienced women over that age, in the manufacturing industries, conferences of all interested parties being held at Victoria and Vancouver, but as the manufacturers' delegates objected to the reopening of the question of wages no action was then taken. The whole subject however, was reopened later on petition of the manufacturers, and a preliminary inquiry was begun,

Industry or occupation	No. of firms reporting in 1922	No. of employees		Legal minimum wages		Average weekly wages actually paid		Average hours per week

\*Rates for inexperienced workers under consideration.

but at the close of the year, had not sufficiently progressed to justify the holding of a conference.

The information contained in the statistical report, on the numbers employed etc., relates to the week ending November 18, 1922, except in regard to the seasonal occupations, namely the fruit and vegetable and the fishing industries. For the last two divisions the Board called for returns for the

week of greatest employment during the season of 1922. The accompanying table shows, for each industry or occupation covered by an order of the Board, the number of firms reporting, the number of employees under and over 18 years of age, the minimum wages and the average actual weekly wages of each class, and the average number of hours of employment in the week.

---

## FORTY-EGHT HOUR WEEK FOR FEMALE EMPLOYEES IN ALBERTA

### New Regulations of Minimum Wage Board

**F**URTHER changes were made last month in the orders which were issued early in the present year by the Minimum Wage Board of Alberta. These orders, as originally issued, were published in the LABOUR GAZETTE, for March (pages 292 to 294), and an article in the issue for April (page 396) outlined the changes effected later in Orders No. 1 (manufacturing); No. 2 (laundries etc.), and No. 6 (shops, stores, etc.), and also outlined the new Order, No. 7, defining "experienced females," and postponing until September 1, 1923, the coming into effect of Orders Nos. 1, 2 and 6, in regard to the minimum wage of \$14 per week, which had been fixed in those orders for experienced employees in the industries concerned.

Under the new supplementary orders the periods of employment and shifts are fixed for the different classes of employees coming under the various orders, namely, Order No. 1 (manufacturing industry); Order No. 2 (laundries, dyeing and cleaning establishments; Order No. 3 (hotels, restaurants, refreshment rooms, boarding houses, etc.); Order No 4 (personal service occupations); Order No. 5 (offices); and Order No. 6 (shops, stores and mail order houses). The hours of work in

all these employments, excepting those coming under Order No. 6 (shops, stores, etc.) must not exceed 48 in any one week, provided however that in emergency cases overtime may be worked, but in no case is the total time during which a female worker is employed, including overtime, to exceed 52 hours in any three weeks of any calendar month.

Order No. 4 (personal service occupations) now provides that no girl under 18 years of age is allowed to work in any occupation coming under this Order except by permission of the Board. The occupations coming under the Order are described as including hairdressing or manieuring establishments, beauty parlours, barber shops, theatres, motion picture houses, shooting galleries, joy parlours, dance halls, cabarets, garages, gasoline service stations, etc.

All the orders provide that not more than 25 per cent of the entire female working staff shall be apprentices or learners.

Employers of female labour in the occupations coming under all the orders are required to keep registers of the names and addresses, working hours and actual earnings of all their female

employees, and to submit these registers on request to any member or representative of the Board. Employers must also keep a copy of the order which relates to their respective establishments posted in each room where employees are affected thereby. A further provision in all the orders is that where any place of business cover-

ed by the orders is open to the public for business for at least 44 hours in any one week, any employee who is on duty during the whole of this period is entitled to the minimum wage provided for her class, without any reduction whatever.

These new regulations became effective on July 1.

---

## THE SHARE OF WAGE-EARNING WOMEN IN FAMILY SUPPORT

**T**HE Women's Bureau of the United States Department of Labour has issued a report entitled "The Share of wage-earning Women in Family Support, 1923". The object of the report is stated thus: "Because of the scarcity of scientifically collected, specialized information on the subject of the share of women wage-earners in family support and because of the almost total lack of any comparable information regarding the same subject for men, the Women's Bureau decided to make an investigation relating to these matters which should be both comprehensive and detailed and which should give comparable material for men and women." The wage-earners in the shoe industry of Manchester, N.H., were chosen for study, the commissioner of labour of New Hampshire having requested that the survey should be made in that state and Manchester containing representative industries employing large numbers of both men and women. The investigation was made in 1920 and covered five separate shoe factories. The number of workers interviewed was 1,481, and information was secured regarding 740 others.

Material collected by other agencies which contained information on the home responsibilities of women was also studied and the pertinent facts are presented in the same volume. The report is, accordingly, arranged in three parts: first, the Manchester study which gives not only the home obligations of wo-

men but those of men as well; second, the data secured from the cost-of-living investigation made by the Bureau of Labour Statistics in 1918-19 which show the sources of family income and the actual and relative economic importance of sons and daughters, and, third, the data on the dependants of wage-earning women, and in a few cases, of wage-earning men, which have been secured in the course of inquiries on one subject or another by different organizations over a period of about thirty years.

In the Manchester study, the men and women were practically all working in the shoe industry. In the cost-of-living survey, the men and women concerned were employed in almost every known occupation as wage-earners or salaried workers. In the miscellaneous reports, a great variety of occupations was represented but the majority of the workers were "unselected groups working in representative women-employing industries in states or smaller localities."

It is stated that one in every four persons gainfully employed in the United States is a woman. "Few people realize that the single woman who works is often the chief breadwinner for her family and that almost every married woman wage-earner is working to supplement her husband's inadequate earnings and is turning over her entire wage to help out with the family

expenses. And almost no one appreciates the fact that many families get as much financial help from daughters as from sons."

"The girl who does not contribute to her family regularly but instead provides, whenever they are needed, some essential articles, such as shoes and clothes for her younger brothers and sisters, or who pays the gas and coal bills; the woman who gives a stated amount regularly as her contribution to the family budget; the girl who turns over her entire wage to her mother, or father, and gets back for her own expenses what can be spared after the family needs are met; the woman who is the head of her household and with her earnings supports one or more persons besides herself; the woman who does not live at home but contributes regularly to help support her parents or other relatives; the girl who helps out her married sister by clothing nieces or nephews or paying rent—all these are typical cases which occur more or less frequently among all groups of women wage-earners." The aim of the report is to give—without imposing an individual interpretation of what constitutes a total or partial dependant—a definite account of the amount contributed in relationship to both the wage of the contributor and the income of the family.

The earnings of the men and women in the Manchester inquiry were not comparable in any way. Only 11 per cent of the women as compared with 61.6 per cent of the men received \$1,000 or more during the year. This difference cannot be ascribed to greater irregularity at work on the part of the women, for similar differences were found for men and woman who had worked regularly throughout the year. In groups with the same amount of experience in the occupation, there was also a discrepancy in the earnings of men and women.

Of the men two-fifths were less than 25 years old and three-fifths of the

women were in this age-group. The percentage of married men was 53.4 and of married women 23.1. Of the women 67.8 per cent were daughters living with their parents. The number of sons living at home was about the same as the number of married men. "The average size of the families of the men and women was not very different, being slightly larger for the women (5.64 persons) than for the men (5.15 persons)." On the other hand, there were generally more wage-earners in proportion to the size of the family for the women than for the men. The need for a greater number of wage-earners in the families of the women is apparent when it is remembered that the average weekly earnings of the women are much lower than those of the men.

The report states that of the women in the Manchester study who were living at home, 67.9 per cent contributed all their earnings to the family support. Only 15.4 per cent of the women interviewed were married, and in 85 per cent of the families which had wage-earning wives the husband earned less than \$1,500 in a year. From the material collected by the Bureau of Labour Statistics in the cost-of-living survey it is found that only 11.2 per cent of the families studied had an income from the wives' earnings. In certain industrial centres, particularly in the textile manufacturing towns, a much larger proportion of married women are employed.

The contributions of single women to family support are important in relation both to the size of their earnings and the family income. Of the 67.8 per cent of the women studied—that is of the daughters living with their parents—59.9 per cent contributed all their earnings to their family and about 30 per cent of them had contributed all their earnings for more than five years. The Bureau of Statistics cost-of-living study showed that in 90.5 per cent of the families having daughters 16 years

old or more, these daughters 16 years tributing all their earnings to their families.

The proportion of the burden of family support borne by the single women living at home was more than 30 per cent in 22.2 per cent of the cases studied in Manchester and in 32.2 per cent of the families in the cost-of-living investigation. In one special inquiry it was found that from 26.7 per cent to 39.7 per cent of the family income was derived from the earnings of daughters.

It has been noted that in the Manchester study, the men are older than the women workers, more of them are married, there are fewer wage-earners in their families and their earnings are much greater. In the families which had men and women wage-earners, the men contributed, on the whole, more than the women, but in relation to the size of their earnings the contributions of the two sexes are practically of the same proportions. In two groups of men and women who were alike in the size of their earnings and in their family relationship, the women contributed all their earnings to a greater extent than did the men, and a larger percentage of women than of men had contributed all their earnings for the entire time they had been at work.

In the investigation made by the Department of Commerce and Labour in 1907-09 into the conditions surrounding woman and child wage-earners, it was found that in each of the four industries studied the contributions of the women to family support were a larger proportion of their earnings than was the case with the men.

With regard to the share of the family budget these contributions form, the report on the Manchester study states that "although a larger proportion of sons than of daughters earned

30 per cent or more of the family income, a larger proportion of daughters than of sons contributed more than 30 per cent of the family earnings". In the cost-of-living investigation, in which the families studied were selected to represent those in which the father was the chief wage-earner, less than 30 per cent of the family income was derived from sons in 59.3 per cent of the families having wage-earning sons and from the daughters in 67.8 per cent of the families having wage-earning daughters, "a difference which seems very much less than might have been expected in view of the difference in the wage rates which prevail for men and women."

The concluding paragraph of the section summarizing the information contained in the various reports states: "Although their findings cannot be considered to be final, in all these reports one conclusion is inescapable. It is that in general women are wage-earners not only for their own entire support but to meet a very definite responsibility as sharers in the support of others or the maintenance of higher standards of living in their families. The burden of responsibility assumed by women is very different from that of men. It is older people who look to women for assistance and support, and usually there is no alternative for the wage-earning woman who falls heir to responsibilities not of her own choosing. On the other hand, the man is usually responsible for a young and rising generation whose support he has undertaken deliberately and whose burden becomes lighter as the years advance. These differences are natural and unavoidable but they emphasize the necessity for a clearer understanding and a more equitable valuation of the wage-earning woman as an economic factor in the family."

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JULY, 1923,  
AS REPORTED BY EMPLOYERS

**F**URTHER moderate improvement in employment was shown in statements furnished the Dominion Bureau of Statistics by employers of labour at the beginning of July, the index number rising by practically two points to 99.5. This is higher than at any period of 1922 or 1921, exceeding last year's peak, which was not reached until four months later, by about four points, and being over nine points above the peak for 1921. The curve in the accompanying chart shows clearly the favourable situation indicated at the commencement of July in comparison with any month in the two preceding years. As mentioned in the last issue of the LABOUR GAZETTE, it may be expected that this curve, still paralleling its 1922 movement, will continue to rise moderately during the next few months.

The improvement was most pronounced in construction; transportation afforded a good deal more employment, while very little change on the whole was shown in manufacturing; gains in saw mills and some other branches of this division counter-balanced losses in textiles and iron and steel, those in the former being partly seasonal in character. Logging operations were con-

siderably curtailed, also on account of seasonal causes. Employment in mining as a whole remained stationary, while increased activity was recorded by summer hotels, in trade and communication. Statements were received from 5,765 firms with a combined payroll of 830,371 persons, of whom 815,128 were at work at the beginning of July; in the preceding month they had employed 799,407 workers. There was, therefore, an increase in personnel of 15,721 employees or practically 2 per cent. As indicated above, the index number for the month under review stood at 99.5, as compared with 97.3 on June 1, 1923, and with 91.1 and 87.5 at the beginning of July, 1922 and 1921.

Increased activity was reported in all provinces; the gains in the Maritime and Prairie districts were the most extensive. In the former the largest additions to staffs were recorded in saw and lumber mills and on highway construction. Railway and building construction and logging also showed substantial improvement. In the Prairie provinces the railways absorbed the majority of the additionally employed workers, the gains on railway construc-

tion and maintenance being especially large. Building construction, railway operation and construction and lumber mills in Quebec reported especially pronounced increases; logging and textiles, on the other hand, recorded greatly reduced activity, and contractions were also indicated in iron and steel, shipping and stevedoring and rubber. The expansion on highway construction in Ontario was the most decided, but considerable gains were also registered in fruit canneries, shipping and stevedoring, sawmilling and building. These additions to staff however, were largely offset by decreases in garment, iron, steel, and rubber factories and in logging. In British Columbia moderate improvement was recorded in a number of industries, notably in fish canning, sugar refining, water transportation and railway construction. The following table of index numbers shows the favourable situation reported in every section of the country as compared with the same period of 1922 and 1921. In the Maritime provinces and Quebec the index numbers, for the first time since 1920, were above the base; in the Prairie provinces the number last year rose to practically the same level as during the month under review, but not until the beginning of August. The situation in British Columbia and Ontario is already better than in any period in the last two years.

District	Relative weight	July 1, 1923	June 1, 1923	July 1, 1922	July 1, 1921
Maritime Provinces...	9.2	101.0	93.9	92.6	89.0
Quebec .....	27.2	100.5	99.1	88.0	87.2
Ontario .....	42.2	97.2	96.8	89.2	84.2
Prairie Provinces.....	13.2	101.4	95.5	99.7	94.7
British Columbia.....	8.1	103.9	100.4	99.2	92.6
Canada.....	100	99.5	97.3	91.1	87.5

An analysis of the returns by cities shows that firms in Montreal, Ottawa, Winnipeg and Vancouver enlarged their staffs, while in Hamilton and

Toronto reductions were recorded. In Montreal returns were tabulated from 724 employers with an aggregate working force of 110,487 persons, or 663 more than at the beginning of June. Building contractors registered the largest gains, but improvement was also reported in tobacco, boot, shoe and glass factories and in the construction of roads. On the other hand, textile, iron, steel, printing, shipping and stevedoring showed contraction. The changes in Toronto were comparatively slight, the most decided decreases occurring in rubber, textile, iron and steel factories, while the only important increases were reported in biscuit factories and on highways. A total payroll of 98,140 persons was indicated by the 798 Toronto firms making returns who had employed 98,745 workers at the beginning of June. Varying conditions were recorded in Ottawa; employment in pulp and paper factories fell off to some extent, but increased activity was indicated in highway and building construction and in retail trade. Reports were compiled from 129 employers whose payrolls included 11,684 persons, as compared with 11,560 at the beginning of June, the difference representing an increase of 1 per cent. In Hamilton very large decreases were registered, mainly in cotton and other textile factories where they were partly due to seasonal slackness. In addition, contractions were shown in iron and steel works. The 194 firms in this city making returns, whose payrolls comprised 27,662 persons, reported that they had released 1,147 persons or 4 per cent. The changes in Winnipeg were small; the gains in brick factories and in iron and steel shops were the largest. An aggregate working force of 24,960 persons was registered by the 290 concerns reporting, who had employed 24,717 workers at the beginning of June, an increase of 1 per cent. A moderately upward trend was shown by the majority of industries in Vancouver. Sugar refineries, shipping and stevedoring, and local transportation recorded the greatest increases while the heaviest losses occurred

in saw mills. According to reports from 213 employers they had a combined staff of 21,439 persons which was 785 or 3.8 per cent more than at the beginning of June. The index numbers of employment in these cities are given in the following table:—

City	Relative weight	July 1, 1923	June 1, 1923	July 1, 1922
Montreal .....	13.6	95.9	95.4	88.2
Toronto .....	12.0	89.5	89.9	88.4
Ottawa .....	1.4	10.2	100.6	
Hamilton .....	3.4	91.4	94.6	
Winnipeg .....	3.1	87.7	87.1	92.8
Vancouver .....	2.6	100.3	94.7	97.4

### The Manufacturing Industries

There were considerable seasonal fluctuations in this division at the beginning of July, but the balance of employment was favourable. Saw mills reported further marked activity and improvement was shown in fruit, vegetable and fish canneries, in pulp, paper, tobacco, brick, glass, electric current, gas and petroleum factories. On the other hand large declines, representing partly seasonal inactivity and partly temporary shut downs for holidays and inventories, were indicated in textiles. Contractions were also reported in iron and steel, rubber, musical instruments and chemical works. Statements were tabulated from 3,811 manufacturers having 460,481 persons on their staffs as compared with 460,249 workers at the beginning of June. There was, therefore, a nominal increase of 232 persons or .1 per cent. The trend of employment at the beginning of July, 1922, had been unfavourable chiefly owing to the temporary closing of the railway car shops, and the index number then stood practically 9 points lower than during the period under review.

**ANIMAL PRODUCTS — EDIBLE.**—The trend of employment in this industry continued to be moderately upward, further improvement being recorded in

dairies and fish canneries. Abattoirs and meat packing plants, on the other hand, reported curtailment of staff. Activity in the Maritime Provinces and Quebec declined slightly, while in the remaining districts increased employment was afforded, notably so in British Columbia. Statements were received from 187 firms employing 14,490 persons or 232 more than at the beginning of June. This was a gain of 1.6 per cent. Additions to staffs on a somewhat larger scale had been indicated by the firms reporting for the beginning of July, 1922, when the index number had stood a few points higher.

**LEATHER PRODUCTS.** — Varying conditions reported in this group resulted in a very small net increase. Boot and shoe factories were considerably busier, but less activity was indicated in plants preparing leather. Quebec employers recorded practically all the gain, while in Ontario declines were registered. The working force of the 204 firms making returns stood at 17,109 persons as compared with 17,092 at the beginning of June. Additions to staff on a very much larger scale had been indicated during the corresponding period of last year and employment then was in a slightly greater volume than for the month being surveyed.

**LUMBER AND ITS PRODUCTS.**—Further and large additions to staffs were reported by the 711 concerns making returns in this group, 3,895 persons having been added to their staffs since the beginning of June. Since their payrolls included 59,916 workers as compared with 56,021 in the month before, this was an increase of 7 per cent. Improvement was recorded generally throughout the country the gains in the Maritime Provinces and Quebec being most extensive. The expansion was confined almost entirely to saw and lumber mills, reductions being indicated in furniture factories and in other branches of the lumber industry. Improvement had also been registered at the commencement of July, 1922, although it was not

so pronounced and the level of employment then was somewhat lower.

**MUSICAL INSTRUMENTS.** — Further contractions almost wholly in Ontario, were indicated by manufacturers of musical instruments. This is a seasonal movement, repeating that experienced at the beginning of July of last year. According to reports from 40 manufacturers, 2,899 persons were employed in making pianos and other musical instruments. In the month before these firms had 3,051 persons working for them; there was therefore a decrease of 5 per cent.

**PLANT PRODUCTS — EDIBLE.** — The volume employment afforded in this industry early in July showed another and more pronounced seasonal increase which exceeded that indicated during the same period of last year when the index number had stood somewhat lower. Fruit and vegetable canneries reported the bulk of the gain but improvement was also shown in sugar refineries, biscuit, chocolate and other food factories. All provinces shared in the upward movement which however, was most marked in Ontario and British Columbia. A total working force of 25,489 persons was registered by the 270 firms making returns who employed 24,134 workers at the beginning of June. This increase of 1,355 persons represented a 5.6 per cent gain.

**PULP AND PAPER PRODUCTS.** — Continued expansion was shown in this industry at the beginning of July, although the gains were considerably less than those registered during the month before. Statements were compiled from 443 manufacturers employing 53,516 persons as compared with 53,321 in their last report. Firms in the Maritime Provinces, Quebec and Ontario recorded increased activity but in the Prairie district and British Columbia curtailment of employment was shown. Practically all the additionally employed workers were absorbed by pulp and paper mills, while printing and publishing showed the usual midsummer quiet-

ness. The trend of employment during the same period of last year had been upward also, but the situation then was not so favourable as for the month being reviewed.

**RUBBER PRODUCTS.** — The production of rubber foot-wear, tires and other rubber goods showed a decline at the beginning of July, when 924 persons were released from the staffs of the 31 firms reporting. Their payrolls included 11,157 persons as against 12,081 at the beginning of June, a reduction of 6 per cent. The losses were recorded wholly in Quebec and Ontario. The employers making returns during the corresponding month of last year had shown considerably increased activity, but employment then was in somewhat less volume than for the month being reviewed.

**TEXTILE PRODUCTS.** — Further and heavier contractions were recorded by textile manufacturers at the beginning of July, the losses being particularly large in cotton and other textile mills. Hosiery, knitting, garment and head-wear factories, moreover, were slacker and slight curtailment was indicated in several other branches of the industry. Quebec and Ontario reported practically all the decline, the changes elsewhere being comparatively small. The payrolls of the 583 employers from whom statements were received, aggregated 69,871 persons, which was 2,654 less than at the beginning of June. This decrease of 3.7 per cent caused the index number to be very slightly lower than at the same period of last year when reductions in personnel, though on a much smaller scale, had also been reported.

**TOBACCO, DISTILLED AND MALT LIQUORS.** — The trend of employment in this division continued upward, 504 persons being added to the staffs of the 97 firms making returns. As they employed 11,559 persons as compared with 11,055 in their last report, this represented an increase of 4.6 per cent, most of which was absorbed by tobacco factories in Quebec and Ontario. Breweries

also afforded more employment. The situation was rather more favourable than at the beginning of July, 1922, when improvement had also been indicated.

**CHEMICALS AND ALLIED PRODUCTS.** — Factories producing drugs, medicines, pharmaceutical preparations and soaps in Ontario were somewhat less fully employed than in the last report. Statements compiled from 108 manufacturers in the chemical group showed that they employed 6,708 persons as compared with 6,855 at the beginning of June, a decline of slightly over 2 per cent. Employment at the beginning of July of last year had also decreased and the index number for the month being reviewed was slightly higher.

**CLAY, GLASS AND STONE PRODUCTS.** — Summer activity continued to be apparent in this division, the increases repeating those reported during the early part of July, 1922, when conditions were slightly less favourable. Returns from 121 employers showed that their staffs rose from 10,190 persons at the beginning of June to 10,401 in the early part of July, the difference being an increase of over 2 per cent. Brick and glass works in Quebec and Manitoba absorbed most of the additionally employed workers.

**ELECTRIC CURRENT.** — Further improvement was reported by electric current producers, chiefly in British Columbia. The movement in July of last year had also been favourable although the index number then was not quite so high as for the period under review. The working force of the 79 manufacturers making returns, standing at 10,204 persons, was 159 greater than in the preceding month.

**IRON AND STEEL PRODUCTS.** — Moderate, though fairly general contractions were indicated in this division at the beginning of June, when 2,598 persons were released from the staffs of the 621 firms from which returns were tabulated.

Improvement was indicated in the Prairie provinces, but elsewhere declines were reported, those in Ontario being much the largest. Rolling and forging mills, automobile, railway car, agricultural implement, ship building, wire and hardware works were slacker, as were also foundries and machine shops. Slight improvement, on the other hand, was registered in factories producing general plant machinery and structural iron and steel. The working force of the 621 firms making returns, standing at 133,275 persons, at the commencement of June, declined to 130,677 at the beginning of July. The difference represented a contraction of 1.9 per cent. Reductions in personnel on a much larger scale owing to temporary cessation of work in the railway car shops had been indicated in July, 1922, when the situation had been decidedly less favourable, employment then being nearly 20 points lower.

**MINERAL PRODUCTS.** — Factories making petroleum products in Ontario, Quebec and the Prairie provinces were considerably busier than during the preceding month and artificial ice works in the last named district also employed larger working forces. Statements were compiled from 75 concerns in the mineral products group employing 9,969 persons as compared with 9,687 workers in the month before, an increase of 2.9 per cent. Small additions to staffs had been reported during the same period of last year, when employment was in much smaller volume than at the beginning of July, 1923.

**MISCELLANEOUS MANUFACTURING INDUSTRIES.** — Broom and brush manufacturers in Ontario were slightly less fully employed, and reductions in staff were also indicated in works producing window shades and fixtures in Quebec. A combined working force of 4,082 persons was recorded by the 65 firms making returns who had employed 4,271 workers in their last report. The difference represented a decline of 4.4 per cent.

### Logging

Substantial declines in employment were registered in logging camps at the beginning of July, when 1,644 persons were released by the 199 concerns making returns. Their working force comprised 18,074 persons compared with 19,718 on June 1. The greater part of this decrease of over 8 per cent occurred in Quebec and Ontario, while in the Maritime Provinces increased activity was indicated. Rather heavier contractions had been recorded at the commencement of July, 1922, when the index number of employment stood 17 points lower.

### Mining

**COAL MINING.** — Employment in coal mines in the Prairie provinces and British Columbia showed some curtailment, while in the Maritime provinces activity was slightly heightened. Returns were tabulated from 92 operators whose working forces of 28,706 persons were smaller by 320 employees than at the beginning of June. The tendency at the same period of last year was also retrogressive, although the declines were somewhat less extensive, and the index number then was lower.

**METALLIC ORES.** — Gold mining in Ontario afforded slightly more employment, while elsewhere very little change was indicated in metallic ore mining. Forty-five firms registered a combined payroll of 11,512 persons as against 11,393 in the last report, an increase of 1 per cent. Moderate improvement had also been shown during the same period of last year when the index number stood nearly 29 points lower than for the month being surveyed.

**NON-METALLIC MINERALS.** — General but rather slight increases in employment were reported by quite a number of the industries coming under this heading, chief among them being salt mining, natural gas producing, sand and gravel digging. The gains were very largely confined to Ontario. Statements

furnished by 67 employers showed that 6,618 persons were employed in the non-metallic ores division as compared with 6,420 in the month before. This was an increase of rather better than 3 per cent. Although a very much larger percentage increase had been indicated at the beginning of July, 1922, the index number then was several points lower than at the beginning of this July.

### Communication

The volume of employment afforded in this group showed another increase, continuing the upward movement indicated uninterruptedly since the first of January. An aggregate payroll of 21,109 persons was reported by the 161 firms making returns who had employed 20,838 workers at the beginning of June. This increase of slightly more than 1 per cent was registered very largely in telephones in Ontario, although improvement was also reflected in statements from telegraphs in the Maritime provinces and Quebec. Moderately increased activity had also been indicated at the same period of last year when the index number was lower than for month being surveyed.

### Transportation

**STEAM RAILWAYS.** — A continuation of summer activity was indicated by steam railways at the beginning of July, 3,177 persons having been added to the staffs of the 112 concerns and divisional superintendents making returns. As they employed 79,098 workers as compared with 75,921 workers at the beginning of June, this was a gain of 4.2 per cent. Quebec, Ontario, the Prairie provinces and British Columbia shared in the expansion, that in the Prairie district and Quebec being especially large. In the Maritime provinces on the other hand seasonal declines were reported. A favourable movement on the whole had also been shown at the beginning of July of last year, but employment then was in very much smaller volume than during the period under review.

Industry	Relative weight	July 1, 1923	June 1, 1923	July 1, 1922	July 1, 1921

SHIPPING AND STEVEDORING. — Considerable fluctuations were shown in this group in different parts of the country. In Ontario and British Columbia the tendency was upward, but the gains were not large enough to offset the reductions that were registered in the Maritime provinces and Quebec, and a net decline of 147 men was recorded by the 59 concerns making returns. Their working force comprised 14,603 persons as compared with 14,750 at the beginning of June. Expansion had been indicated during the same period of last year, when employment was in greater volume.

#### Construction and Maintenance

BUILDING CONSTRUCTION.—Continued seasonal activity was recorded by building contractors at the beginning of July, 315 of these firms employing 24,798 persons as compared with 21,427 in their last report. This increase of 3,371 persons or 4.2 per cent was shared in to some extent by all provinces; the gains in Quebec were, however, much the largest. Additions to staffs on a somewhat smaller scale had been indicated during the same period of 1922, but the index number then was several points lower.

HIGHWAY CONSTRUCTION. — Operations on road building provided work for a very much larger number than in the preceding month, there being an increase of 4,137 men or 65 per cent. Some 10,500 men were reported by the 47 contractors making returns whereas at the beginning of June they had employed 6,367 workers. Ontario and the Maritime provinces absorbed the majority of the additional employees, but improvement was also recorded in Quebec and the Prairie district. Somewhat greater activity had been indicated by the firms reporting for the beginning of July of last year.

RAILWAY CONSTRUCTION AND MAINTENANCE. — Further pronounced expansion was shown by these departments of the railways; the payroll of the 32 con-

cerns and divisional superintendents making returns was 11.3 per cent larger on July 1 than June 1. Their working forces comprised 51,403 persons as compared with 46,199 on the latter date. All provinces shared in the expansion which was most pronounced in the Prairie provinces. Large increases in personnel had also been registered at the same period of last year, but the number of men employed on railway construction and maintenance then was considerably smaller than for the period being surveyed.

#### Services

**HOTELS AND RESTAURANTS.**—Summer hotels made further large additions to staffs, mainly in New Brunswick, Quebec and Ontario. Statements were received from 69 concerns employing 8,091 workers in comparison with an aggregate payroll of 7,389 at the beginning of June. This was an increase of 9.5 per cent which caused the index number to be higher than at any other period of the record, exceeding that for July 1, 1922, by over 16 points.

#### Trade

Employment in both retail and wholesale trade continued to improve moderately; the largest gain in the former division occurred in Ontario, while in the latter it was in British Columbia. A combined sales force of 54,557 persons was reported by 550 firms in the trade division. As they had employed 54,258 persons at the beginning of June this represented an increase of 6 per cent. Expansion on a rather larger scale had been indicated during the same month of last year, but the index number then was somewhat lower.

The table on page 901 shows the index numbers of employment in the various industries as on July 1 and June 1 of this year and July 1, 1922 and 1921. The first column shows the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review. (Number of workers employed in January 1920 equals 100.)

---

### UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING JUNE 30, 1923, AS REPORTED BY UNIONS MAKING RETURNS.

**T**HE present article on unemployment among members of trade unions deals with the situation reported during the quarter ending June 30, 1923. At the end of April the percentage of unemployment was 4.6, and during the following two months improvement was registered, the percentage of idleness at the end of May standing at 4.5 and at 3.4 on June 30, 1923. In comparison with the corresponding period of last year more employment was afforded, the percentage out of work at the end of June being nearly 2 points lower than at the close of June, 1922. (Unemployment as used

here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.)

The accompanying chart shows the curve of unemployment as reported by

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES.

trade unions by quarters for 1916-17-18 and by months for 1919-20-21-22 and to June of this year. Throughout the quarter the curve has followed a downward course similar to that of the corresponding quarter of last year. There was, however, a lower level of unemployment during the period under review.

During April smaller percentages of idleness than in the previous month were reported in all provinces except Alberta. In May improvement over April was reported in all provinces except Quebec and New Brunswick; in the former owing to less activity for garment workers.

In June improvement for all Canada as a whole continued to be registered. Quebec, Saskatchewan, and Alberta reported more activity than in May. New Brunswick reported no change and the other provinces, slight increases in unemployment.

Table I on this page summarizes the returns by provinces, and Table II on

(Continued on page 906)

page 908 shows the percentage of unemployment reported in the different groups of industries.

Workers in the manufacturing industries were more fully employed in April than in the same month of last year, pulp and paper, garment, textile, iron and steel, and glass workers all reporting smaller percentages of unemployment. Fishermen, lumber workers, miners, building and construction and transportation workers also showed improvement over April of last year.

The situation during May was more favourable than in the corresponding

month of last year, improvement having been recorded in the manufacturing, mining, building and construction and transportation groups. Lumber workers, however, reported larger percentage of unemployment. In the manufacturing group pulp, textile, garment, iron and steel and glass workers were busier than in May of last year and employment in the printing and publishing trades remained on the same level.

During June improvement over June of last year was recorded in the mining, manufacturing, building and con-

struction and transportation groups. Retail clerks and lumber workers' however, were not so fully engaged. In the manufacturing group, pulp, iron and steel and glass workers were more fully engaged, but employment for garment workers and printing tradesmen was in lesser volume.

The accompanying tabulations (Table III) show in some detail the

returns for the month ending June 30, 1923, for which month returns were received from 1,449 labour organizations with an aggregate membership of 155,056 persons, 5,299 of whom were out of work representing a percentage of 3.4. The table also gives the general percentages of unemployment in the various trades and industries for April and May.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD APRIL—JUNE 1923

---

**A** SURVEY of employment during the period April to June 1923, as indicated by the reports from the offices of the Employment Service of Canada, shows that the advancement in the volume of business noted during the first quarter of 1923 had continued, the seasonal calls for farm workers and building and outdoor labour being responsible chiefly for this increase. Compared with the same period of 1922 a gain in the volume of business was reported, there being approximately 15 per cent more vacancies offered and placements effected, while the number of applications were increased more than seven per cent. The chart on page 912, which accompanies the article on the work of the employment offices for the month of June 1923, shows a rapid rise in the curves of applications, vacancies and placements during April, following by a period during May when the demand (vacancies) fell off slightly while placements continued to rise and registrations remained constant. This period marks the peak of the spring demand for farm workers, especially in the Prairie provinces, and represents also the opening of the building season and the commencement of logging and river driving operations. During June the three curves declined slightly but did not drop to the low level of June 1922.

During the quarterly period under review the offices reported that they had made 112,604 references to positions and had effected a total of 108,499 placements, of which 81,028 were in regular employment and 27,471 in casual work. This represents an increase of 14 per cent in regular placements and 16 per cent in casual placements over the same period a year ago when a total of 94,447 placements were effected. Of the placements in regular employment during the period under review 71,405 were of men and 9,623 of women. Employers notified the Service of 130,757 vacancies, of which 98,361 were for men and 32,396 for women, as compared with a total of 113,524 during the second quarter of 1922. The number of applications registered at the offices was 136,129, of which 104,838 were for men and 31,291 for women, as compared with 126,140 registrations during the corresponding period a year ago.

The accompanying table gives the number of vacancies and placements by industrial groups as recorded by the offices of the Employment Service of Canada in the various provinces for the period April-June 1923. A report in detail of the work of the offices for the month of June 1923 may be found elsewhere in this issue.

## EMPLOYMENT OFFICE REPORTS FOR JUNE, 1923.

**E**MPLOYMENT, as indicated by the reports from the offices of the Employment Service of Canada, declined somewhat during June, 1923, as compared with May, while maintaining a slightly higher level than during June, 1922. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, portrays this decrease in the business of the offices, due in part to a lull in the demand for farm workers, by a slight though continuous declination in the curves of applications, vacancies and placements. A statistical summary of the reports shows that the average number of applications registered daily at the offices was 1,809 during the first half of the month, as compared with 1,895 during the preceding period and with 1,725 during the same period a year ago. During the latter half of the month applications averaged 1,629 daily, as compared with 1,547 during the latter

half of June, 1922. Vacancies notified by employers to the Service averaged 1,707 and 1,585 daily during the first and second half of the month, as compared with 1,525 and 1,313 during the same periods of 1922. The average number of vacancies reported daily during the latter half of May 1923, was 1,794. Placements made daily by the offices during the first half of June averaged 1,466, as compared with an average of 1,574 during the previous period and with 1,263 during the corresponding period last year. Placements made daily during the latter half of the month averaged 1,344, as compared with 1,160 during the same period a year ago. The average number of placements in regular employment during the period under review was 1,119 and 1,029 daily during the first and second half respectively, while placements in casual work were on an average of 347 and 315 daily.

The following table gives the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months)...	268,001	37,964	305,965
1920 .....	366,547	79,265	445,811
1921 .....	280,518	75,238	355,756
1922 .....	297,827	95,695	393,522
1923 (6 months)....	123,585	69,989	193,574

During the month of June the offices made 36,426 references to positions and effected a total of 35,073 placements. Of these latter, the placements in regular employment totalled 26,807, of which 23,524 were of men and 3,283 of women, while the placements in casual work numbered 8,266. Applications for work during the month totalled 42,880, of which 32,695 were from men and 10,185 from women. Employers notified the Service of 30,602 vacancies for men and 10,465 vacancies for women, a total of 41,067 opportunities for employment.

Placements in regular employment by provinces were as follows: Nova Scotia, 549 men, 64 women; New Brunswick, 2555 men, 80 women; Quebec, 1,526 men, 368 women; Ontario, 10,865 men, 1,037 women; Manitoba, 1,991 men, 469 women; Saskatchewan, 3,086 men, 318 women; Alberta, 2,452 men, 345 women; British Columbia, 2,800 men, 602 women.

#### MARITIME PROVINCES

A few farm workers were placed from Amherst and Moncton, but calls in this group were not numerous. Provincial highway work, street and road repairs, in addition to some sewer construction, gave employment to many labourers at Amherst, Halifax, New Glasgow and Chatham. Although building continued fairly active, the demand for workers was not great. A scarcity of carpenters was reported at

Amherst, Halifax and Moncton, where harbour development and bridge building were under way. Logging operations called for a few choppers, pulpwood cutters and sawyers, from New Glasgow and St. John, while at Amherst increased activities in the lumbering mills created a demand for skilled workers.

#### QUEBEC.

A shortage of farm workers was reported especially from the office at Montreal. The erection of a few public buildings and private residences caused a keen demand for building tradesmen, while road and railway construction provided work for many. Clothing and textile industries were active and several calls for workers in these and in the metal industries were reported.

#### ONTARIO

A slackening demand for general farm labour was shown, with an increased number of calls for fruit pickers near Toronto and in the Niagara Peninsula. Building operations on the whole were very quiet, although no unemployment was reported among building tradesmen. Carpenters, bricklayers and stone masons were required at Pembroke, St. Thomas, Windsor, Belleville and for the districts near Cobalt and Haileybury. In addition to the few residences and public buildings being erected, several municipalities were constructing sewers and water-mains, and re-surfacing and repairing streets, while highway and road construction was under way throughout the province. These latter activities called for numbers of labourers and teamsters, as did also work on railway maintenance and extensions near Cobalt, Fort William, Port Arthur, Timmins, Ottawa and Toronto. In the northern sections of the province river driving was active, and placements of rivermen, pulpwood cutters and sawmillmen were made from Cobalt, North Bay, Ottawa, Port Arthur, Pembroke,

\*111 placements effected by offices since closed.

Peterboro, Timmins and Toronto. A few vacancies for muckers and miners were available at Cobalt and Ottawa. Manufacturing industries were active, though the calls received at the offices were mainly for iron and steel workers, and included moulders, foundry labourers, die sinkers, pipe fitters and factory labourers. Vacancies for marine workers were registered at Fort William, Sarnia and Toronto, while urgent calls for fire fighters were received at Fort William, North Bay and other northern points. Applications and orders with respect to permanent household positions for women remained in somewhat the same proportion as previously reported. Vacancies for workers for summer cottages and hotels were more easily filled and a decline was noted in the calls for casual workers.

#### MANITOBA

The demand in the agricultural group remained steady with a fair supply of experienced applicants. A slow improvement in the building industry, stimulated by residential construction and municipal works, provided employment for several hundreds of men during the month, the calls at no time, however, being in excess of the demand. Labour for railway maintenance and repair work was required at various points in the province and workers were placed from all offices while several were transferred from Winnipeg to points in Ontario. At Winnipeg difficulty was felt in securing experienced river workers, while machine operators and sawmill labourers were in demand and placed. Conditions affecting domestic workers remained constant. There was a keen demand for women workers, especially for farms, with a limited supply of experienced applicants.

#### SASKATCHEWAN

Declining activity characterized the farming group, with the supply of applicants about equal to the lessened

demand. While there was a slight increase over last month in the number of calls for workers in the building industry, no large demand was reported. Carpenters were required for rural and urban work, and placements were made from Estevan, Moose Jaw, Regina and Saskatoon. Railway maintenance and construction work provided employment for numbers of teamsters, graders, sectionmen and extra gang hands. A few river drivers and sawmillmen were required at Port Arthur. There was an increased demand at the offices for waitresses and general institutional help in addition to the usual calls for housekeepers and domestics for rural and urban work. A shortage of experienced women applicants for permanent of casual work was reported.

#### ALBERTA

The demand for farm help remained approximately as previously reported. In some localities a decrease in demand was shown, but from Calgary and Edmonton numerous farm workers were placed, several of whom were transferred in from Vancouver. Heavy rains throughout the province delayed building operations but it was anticipated that all building tradesmen and mechanics would be employed as soon as conditions were favourable. Municipal improvements, irrigation work at Lethbridge and Medicine Hat, and road and highway construction at Banff and Jasper Park, were included among the projects under way. Placements of men on railway maintenance work and bridge repairing were numerous. A few experienced setters, millwrights and sawmill workers, were transferred to Fernie, B. C., while a few sawyers were called for at Lethbridge.

#### BRITISH COLUMBIA

Although the demand for general farm workers was not heavy, the offices reported difficulty in securing experienced applicants to fill the positions.

Highway construction, street and road repairs, employed a number of labourers, while bridge work at Prince Rupert and Revelstoke, dry dock repairing at Vancouver, and some residential construction at various points provided work for skilled carpenters and labourers. Calls for section and extra gang men were filled from Kamloops, Vancouver and Vernon. In the logging industry experienced workmen were scarce; numbers of hookmen, sawyers and swampers, were placed from Cranbrook, Prince George, Prince Rupert, Revelstoke and Vancouver, Tiemakers, pole cutters and sawmillmen, were required at New Westminster and Prince George, while workers on wooden boxes were called for at New Westminster. Miners, muckers and hammermen for metal mining were required and placed from the offices at Vancouver, Victoria and Nelson. In the women's division requests for fruit pickers were numerous, with a fair response of applicants. The offices reported continued lack of trained household help to meet the demand.

#### Movement of Labour

The offices of the Employment Service of Canada made 26,807 placements in regular employment, of which 15,610 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter, 2,474 were granted the Employment Service reduced rate, 1,900 going to points within the same province as the despatching office and 374 to other provinces.

The offices in Quebec issued 98 certificates of transportation to bushmen, river drivers and sawmill hands, going to points within the province. From the office at Montreal 96 bushmen were sent to Sault Ste-Marie, and two bricklayers to London, Ont. From Hull 17 bushmen were sent to the Pembroke zone and from Quebec City 27 river drivers were transferred to Timmins,

Ontario. The offices in Ontario despatched 1,189 workers at the reduced rate, of which 22 were bush fire fighters transferred from Ottawa to the Hull zone. Of the provincial transfers, the majority were bushmen and river drivers, bark peelers and sawmill workers, for points near Fort William, Cobalt, Port Arthur, Timmins, Sudbury and Sault Ste. Marie. Bush fire fighters were sent from Sudbury to points within the zone and near Sault Ste-Marie and Pembroke. To Sarnia were sent 3 marine firemen from Windsor and 4 from Toronto. Iron moulders, carpenters, pipe fitters, engineers, blacksmiths, etc., were among the workers transferred out from Toronto to various points in the province. Manitoba offices granted 514 certificates to workers, of which 213 were sent to points within the province and 301 to other provinces. Of the latter, 285, including teamsters, general and sawmill labourers, construction workers, bushmen and cooks, were transferred from Winnipeg to the Port Arthur district. One stonemason was transferred from Winnipeg to London, Ont. To points in Saskatchewan 7 farm workers, one teamster, 6 housemaids and one elevator construction labourer were transferred. The majority of the provincial transfers were of farm workers. Several were bushmen and railway labourers, while a few housekeepers and maids were placed on farms. Certificates granted by Saskatchewan offices numbered 117, of which 7 were granted to river drivers going to Dauphin, Man.; 2 were to farm workers going to Brandon; one to a hotel clerk sent to Edmonton, Alberta; 2 to sawmill labourers destined to Vancouver, B.C.; one to a sawmill labourer for Le Pas, Manitoba, and 4 to stonemasons travelling to London, Ont. Of the 100 workers sent to employment within the province, 46 were farm hands going to points near Moose Jaw, Swift Current and Saskatoon; 46 were teamsters, road workers and construction labourers going to various

points in the province; 4 were waitresses and maids and one was a bridge worker for employment near Regina. Of the 205 transportation certificates issued by Alberta offices, one was granted to a millwright from Calgary and one to a carriage setter from Edmonton, both travelling to Fernie, B.C. To points in Saskatchewan the offices transferred 19 farm workers. Of the provincial transfers, 64 were of farm labourers, 54 of bushmen, 3 of miners and the remainder included shippers, masons, blacksmiths, a watchman, housekeepers and cooks. British Columbia offices granted the reduced rate to 209 workers, 138 going to points within the province and 71 to other provinces. The majority of the inter-provincial transfers were of farm workers, 41 being sent from New West-

minster and Vancouver to points near Calgary and Edmonton, 29 from Vancouver and Victoria to stations in Saskatchewan and one farmer was sent from Vancouver to Winnipeg. More than 50 per cent of the workers transferred to points within the province were bushmen, axemen, sawmill men and mill labourers. A few were die makers, carpenters and section hands, while several fruit pickers were sent to points near Vernon, Kelowna and Vancouver.

Of the 2,474 workers benefiting by the Employment Service reduced rate, 1,276 were carried by the Canadian National Railways, 1,030 by the Canadian Pacific Railway, 166 by the Timiskaming and Northern Ontario Railway and 2 by the Pacific Great Eastern Railway.

---

### BUILDING PERMITS ISSUED DURING JUNE, 1923

ACCORDING to reports tabulated by the Dominion Bureau of Statistics, there was a decline of 23.6 per cent in the value of the building permits issued in June as compared with May. This seasonal decrease is often experienced during June, the largest aggregate of permits granted usually occurring in April or May, when the building season is commencing. The comparison with June, 1922, also shows less projected activity during the month under review, there being a reduction of 15.9 per cent. Statements received from 56 cities showed that they had authorized building to the value of \$14,345,573, whereas in May, 1923, the total had been \$18,766,065 and in June, 1922, \$17,052,582.

Detailed returns were furnished by 49 cities, which issued over 1,500 permits for dwellings at a total valuation of approximately \$7,600,000, and for some 3,600 other buildings estimated to cost nearly \$5,800,000. Since the

erection of several houses, apartments, stores, etc., is very frequently authorized by one permit, the number of buildings to be put up would be somewhat larger.

All provinces except Prince Edward Island, Nova Scotia and New Brunswick registered declines in the value of prospective building as compared with the preceding month. The increase in Nova Scotia of \$70,543, or 91.8 per cent was the largest, while of the declines recorded elsewhere that in Ontario of \$3,136,195 or 28 per cent was the most pronounced. Alberta, with a percentage decline of 40.4, however, showed the greatest proportional loss. Only Quebec and Prince Edward Island recorded increases in the value of the permits issued as compared with June, 1922, there in the value of the permits issued as compared with June, 1922, there being percentage gains of 12.1 and 93.8 respectively in those provinces. Of the decreases indicated

in the remaining districts, that of \$1,176,166 or 12.7 per cent in Ontario was the largest actual decline, while Nova Scotia, with a loss of \$193,528 or 56.8 per cent, registered the greatest percentage reduction.

All of the four largest cities, Montreal, Toronto, Winnipeg and Vancouver, reported less contemplated building as compared with May, 1923, and with June, 1922. The only increase in both comparisons were indicated in St. John, Quebec, Three Rivers, Brantford, Chatham, London, St. Thomas and New Westminster.

In the records for this month York Township appears for the first time. This township, constituted with its present area of 10,690 acres on July 19, 1922, is geographically part of Toronto. Its assessed population in 1922 was 51,974, which would place it in twelfth place among the cities of Canada.

The following table shows the value of the building permits issued during June as compared with May, 1923, and April, 1922, the 35 cities for which records are available since 1910 being marked by asterisks.

## FAIR WAGE CONTRACTS, JULY 1923

**D**URING July, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to fifteen fair wage contracts, fourteen of which were awarded by the Department of Public Works and one by the Department of Railways and Canals. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to the supplies ordered by the Post Office Department, subject to the regulation for the suppression of the Sweating System and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS

Dredging the basin, Rivière du Loup Bassin, Que. Name of contractor, Lachance Limited, Quebec, Que. Date of contract, June 20, 1923. Amount of contract, Class "A" \$2.50 per cubic yard; Class "B", 34 cents per cubic yard, (scow measure).

Dredging the harbour and entrance piers, Port Hope, Ont. Name of contractor, Frontenac Dredging Company, Limited, Toronto, Ont. Date of contract, July 4, 1923. Amount of contract, Class "B", 65 cents per cubic yard (place measure).

Dredging (mooring berths), Penetanguishene, Ont. Name of contractor, Light and Carson, Penetanguishene and Midland, Ont. Date of contract, June 26, 1923. Amount of contract,

Class "B" 35 cents per cubic yard (scow measure).

Dredging the channel, Bowmanville, Ont. Name of contractor, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, July 3, 1923. Amount of contract, Class "A" \$5.00 per cubic yard, Class "B" 65 cents per cubic yard (place measure).

Dredging, Midland, Ont. Name of contractor, Light and Carson, Penetanguishene and Midland, Ont. Date of contract, June 26, 1923. Amount of contract, Class "B", 35 cents per cubic yard (scow measure).

Dredging and cleaning up the bed of St. Mary's River, opposite City of Sault Ste. Marie, Ont. Name of contractor, The Soo Dredging and Construction Company, Limited, Sault Ste. Marie, Ont. Date of contract, June 30, 1923. Amount of contract \$130 per day of 10 hours for derrick, scow, diver and tug, etc.

Making up and supplying letter carrier's uniforms, etc...	19,121.51
Repairing scales.....	84.00
Repairing boxes and hampers, etc .....	20.50
Supplying ink .....	440.49
New mail boxes.....	1,680.28
Mail bag fitting.....	7,008.90

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

---

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### **Manufacturing: Vegetable Foods, Drink and Tobacco**

EDMONTON, ALBERTA. — CERTAIN MASTER BAKERS AND BAKERY AND CONFECTIONERY WORKERS INTERNATIONAL UNION OF AMERICA No. 276. Agreement effective from May 1, 1923, to April 30, 1924.

Wages per week, foremen, \$33.50; doughmen and ovenmen, \$31.50; bakers and confectioners, \$28.50. All night workers, \$2.00 extra per week. Jobbers, by the hour, 75 cents.

Overtime and holiday rate, time and one-half.

Hours per week, 48. Day work 6 a. m. to 9.30 p.m. Doughmen not to start before midnight. Every week's work to count for itself. Half an hour for lunch.

Cake shops: one apprentice or one helper to three or less journeymen.

No overtime for work done before a holiday. Four hours extra work allowed on day before to make up for holiday.

Bread shops: one apprentice or one helper to every five journeymen.

Helpers not to work on the bench or do a baker's work.

Apprentices not to be under 16 or over 21 at beginning of period. Minimum wage at beginning, \$12 per week.

No bakery waggon driver to do work of a journeyman baker or confectioner.

No local baker to be retained in any shop unless a member of the union. A baker coming to the city may work a week on payment of an initiation fee.

If disputes cannot be settled by union officials meeting the firm, they shall be referred to an arbitration committee of two union members and two employers not parties in the dispute nor members nor employees of firm involved, with an independent chairman. Decision to be binding.

Negotiations during life of this agreement to be carried out by executive committee of one baker and confectioner and one master from each shop.

NEW WESTMINSTER, B.C. — CERTAIN LOCAL FIRMS AND INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL 371, BAKERY DRIVERS. Agreement to be in effect from May 1, 1923, to May 1, 1924. This agreement is identical with the one for the previous year, summarized in the *LABOUR GAZETTE* for July, 1922. It contains the provision that all salesmen's wages shall be adjusted quarterly from the figures of the *Dominion Labour Gazette*.

Wages per week, Bakery salesmen, stablemen, \$25.50, the latter working seven days. Hours per week, fifty.

FERNIE, B.C. — FERNIE FORT STEELE BREWERY COMPANY, LTD., AND INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA. Agreement to be in effect from June 1, 1923 to May 31, 1925. This agreement is identical with the one summarized in the LABOUR GAZETTE for September, 1922.

Eight hours per day, six days per week.

Minimum wages per day in bottle shop, \$5.15.

CALGARY, ALBERTA. — SILVER SPRAY BREWING COMPANY AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL 124. Agreement to be in effect from June 1, 1923, to June 1, 1924, with 30 days' notice of change.

A man to be employed in the trade must pass examination for engineer, fireman, general purpose man or cooper, and all employees must be union members. No discrimination against those who work on union committees.

Hours, March 1 to November 1, 50 per week; November 1 to March 1, 44. Engineers, two weeks' holiday with pay. No overtime in case of breakdown of plant. No overtime to truck drivers, etc., for oiling or greasing trucks.

If union cannot supply a satisfactory man to drive trucks employer may hire one, who shall become a member of the local.

Employees during working hours to be allowed free temperance beer..

Sickness to be no excuse for discharge. Upon recovery man to receive his former position.

Men engaged during busy season not to be counted as permanent, nor taken

into the union if working less than three months. Engineers, firemen and general mechanics engaged under this section must be good standing members of their respective unions. For extra help, company may hire as required, giving preference to returned soldiers provided no union men are out of work, such extra help having permit cards.

Employees may purchase goods from the company at wholesale prices.

In slack time lay off to be in rotation, and for not longer than a week.

Overtime, time and one-half. Sundays and holidays double time.

Provision made for arbitration in case of differences of opinion regarding the agreement.

One boy may be employed for every 10 men, but not boys under 16 years.

Seniority to be given preference.

Brewery agrees to give preference to union made materials.

Wages: per month, engineers, \$148.75 and \$162.60. Nightman, \$128.30; fireman, \$125. Per hour — cooper (slack), bottlers, teamsters, 61½ cents; in cellars and brew house, 63½ cents; machine men and packers, yard teamsters, 58½ cents; labourers, 56½ cents; boys, 38½ cents.

#### Manufacturing: Iron and Steel Products

AMHERST, N.S. — AMHERST FOUNDRY COMPANY, LIMITED, AND INTERNATIONAL MOULDERS' UNION, No. 253. Agreement to be effective from March 1, 1923.

Minimum day wage rate \$6, 58 per cent to be paid on board prices.

No change in other conditions relative to shaking out, trimming of castings, wetting down and cutting over of sand.

Conference agreements to continue to apply to other shop conditions.

Agreement also subject to any change in moulders wages put into effect in store plants in Ontario, prices to go up

or down the same number of points as arranged in Ontario. This is as in the past.

#### Manufacturing: Printing and Publishing

TORONTO, ONTARIO. — PUBLISHERS OF FOUR TORONTO DAILY NEWSPAPERS AND TYPOGRAPHICAL UNION No. 91. Agreement effective July 1, 1922.

In all news offices only union members to be employed. If union fails to supply help, publisher may secure it from any source, but such employees if retained must join the union. Night work, between 6 p.m. and 5 a.m. Day work, between 7 a.m. and 6 p.m. Where an office employs three shifts, two to be considered as on night work. Time off for lunch after not more than 5 hours. Working after 6 p.m. on evening papers, men to have 30 minutes off for lunch.

Special provisions for overtime and short time. On a seven day paper, for a night staff brought back to do day work, six hours to constitute a day's work, thereafter, overtime rates.

Foremen may employ help, and may discharge for certain reasons. In decrease of force, last on to be first off.

Learners: Only journeymen members or apprentices in last 6 months of term to be learners on machines during working hours. Term for learners to be 6 months, and compensation (except for apprentices) not less than three quarters of regular scale.

Machine tenders: No member to act as operator machinist in an office with more than three machines, there being a permanent machine tender in such an office, or in an office with three machines working night and day.

A joint standing committee to meet to settle all differences or disputes or if settlement is not reached, disputes to be referred to arbitration.

Arrangements to be made each week to give a half-holiday to as large as possible a portion of men.

Minimum wages per week: On evening newspapers, \$41, with time and one half after 46½ hours; on morning newspapers, \$43.50; 7½ hours per night, with overtime at time and one-half. Sundays and holidays, double time.

One apprentice to 6 journeymen or fraction of 6 up to 24 employed. With over 24, one to every 10 additional. Beginning with second year each apprentice to attend classes at Toronto Technical School. Beginning with third year each apprentice must take course in printing of the International Typographical Union. Apprentices to begin at not less than sixteen years of age and to serve five years. They must if competent be admitted to the unions as apprentice members at end of second year.

Wage scale of apprentices, per week — Third year, 1st 6 months, \$15; 2nd 6 months, \$17; fourth year, \$19 and \$22; fifth year, \$24 and \$27.

On completion of term, apprentice to be admitted to union and placed at bottom of priority list of employees of one year's standing in office in which he is working.

REGINA, SASK. — CERTAIN FIRMS AND PRINTING PRESSMEN AND ASSISTANTS' UNION No. 75. Agreement to be effective from May 1, 1923, until April 30, 1925.

#### Web Agreement:—

Wages per week, journeymen, day work, \$44; night work, \$47. Apprentices, from \$20 during first year to \$35 during fourth year.

Hours, eight for six days, or seven for six nights. Thereafter, time and one-half. After 12 hours on evening papers and 11 hours on morning papers, double time.

Only union members to be employed, if available. Otherwise company may hire as required men to be unionized after employment. Foreman to be a union man.

Not more than one apprentice to four journeymen.

Pooling of hours prohibited.

Disputes to be settled by arbitration.

Work on holidays, first three hours, time and one-half; remainder double time, except on morning papers where seven hours pay shall be given for five hours work.

#### *Job Agreement:—*

Minimum wages per week: Foreman (one or two cylinder presses) \$43; three or more cylinder presses, \$46; one cylinder and three platen presses, \$43; journeyman pressman operating two cylinder presses, \$40.35; foreman in charge of offset press, \$46; journeyman offset pressman, \$42; offset assistant, \$31; cylinder assistant, \$29, automatic feed operators, \$33.

Platen Presses: Foreman, \$39 and \$44, journeyman, \$38; feeders, \$29.75.

Foreman or pressman to be allowed to operate one cylinder and three platen presses, or not more than five platen presses, one journeyman to four or fraction thereof.

Those receiving higher wages not to be reduced under this agreement.

Hours per week, forty-four. Overtime, first three hours, time and one-half; thereafter, double time. Night work \$3.00 more than day scale.

Only union members to be employed under the agreement.

Disputes over prices or conditions to be settled by arbitration.

Holidays, first three hours, time and one-half, thereafter, double time; but on morning newspapers, a night's work to be five hours, paid for as seven.

Employer may secure necessary help if union fails to supply same.

SASKATOON, SASK. — CERTAIN FIRMS AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, No. 206. Agreement in effect from October 1, 1922, until September 30, 1923.

Hours per week: 44 in job pressrooms. Web pressrooms, day work, 48 hours; night work, 42 hours.

Union to furnish capable men, but failure to do so not to be reason for breaking the agreement.

Minimum wages per week: Web pressroom, journeyman, \$43; assistant, from 33 1/3 per cent of scale in first year to 80 per cent in fifth year. On holidays, night to be considered as regular shift, and no overtime rate to prevail if only usual hours are worked. Platen presses, journeymen, \$37.50; cylinder presses, journeymen, \$40.35; assistants, from 40 per cent of journeyman's scale for first year, to 80 per cent for fourth year. Feeder, second year, 33 1/3 per cent of journeyman's scale. Pressmen on offset presses, \$46. Night scale \$2 above day scale.

Apprenticeship term, four years, apprentice to be a feeder of at least two years and a member of the local, becoming a full member on completion of fourth year. One apprentice to four journeymen.

Overtime (before and after regular hours and all work in excess of stipulated work day) time and one-half.

VANCOUVER, B.C. — CERTAIN BOOK AND JOB OFFICES, AND VANCOUVER TYPOGRAPHICAL UNION, No. 226. Agreement to be in effect from September 1, 1922 to August 31, 1923.

Excepting apprentices, only union members to be employed.

Hours, per day or night eight and four on Saturdays or one night per week.

Wages per week: day work, \$39.60; night work, \$43.10. Machinist operators, \$3 per week above scale. Overtime time and one-half. Holidays and Sundays, double time.

Provided an arbitration agreement is later arrived at, any employer signing this agreement agrees to become a party to one arbitration proceeding representing the employing commercial printers of greater Vancouver.

One apprentice to eight journeymen or less; two to more than eight. Not more than two to an office. No youth under 16 to be an apprentice, and applicant must pass an examination. Youths who handle type or material in the composing room to be considered apprentices. Other boys not to be so considered.

Minimum Scale for apprentices: third year, one-third of journeyman's wages; fourth year, one-half; fifth year, two thirds.

NANAIMO, B.C. — CERTAIN EMPLOYING FIRMS AND NANAIMO TYPOGRAPHICAL UNION No. 337. Agreement in effect from November 1, 1922 until October 31, 1923, and thereafter unless terminated by two months' notice.

Wages per week, day work \$39; night work, \$42. Hours: per day, day work, 7 1/3; 44 hours per week. In case of a weekly half-holiday, 44 hours per week, eight hours for five days with four hours on any sixth day.

#### *Machine tuition:—*

Beginners on typesetting machines to be active members of this union, with wages by special agreement, and but one apprentice to each five machines or fraction thereof.

Overtime, first five hours, time and one-half. Thereafter, double time. Holidays, double time. For work on morning newspapers on holidays, five hours per night, with a full night's wages.

Operators on machines to be journeymen members in good standing of this union. Apprentices in last six months of their time may practise on machines.

Under conditions such as a breakdown men may be required to get out regular editions working overtime at single price.

#### *Apprentices:—*

At least one number of the union to be employed in composing room before the office is entitled to an apprentice.

One apprentice to each six journeymen or major fraction thereof. No youth under 16 to be accepted. Apprentice must read manuscript, have common school education, and perform duties of a copyholder. After second year he must take the I. T. U. course.

Term of apprenticeship five years, during last of which wages shall be two thirds of journeymen's scale. Controversies to be settled by arbitration.

#### **Manufacturing — Clothing**

WINDSOR, ONTARIO. — PEABODY'S, LTD., AND UNITED GARMENT WORKERS, LOCAL No. 190. Agreement to be in effect from May 21, 1923 until May 22, 1924, and thereafter unless on 15 days' notice in writing of intention to cancel.

Employer to have use of union label, a union member being in charge of labels.

Employees to be not less than 16 years of age and to be good standing union members.

During slack season, work to be equally divided.

Hours per week 44.

Shops to be equipped with mechanical power.

Differences to be submitted to general officers of union for adjustment.

*Supplementary Agreement:—*

Operators on leaving work on inspectors' table not to be required to handle same unless to repair same, and no fines to be imposed for imperfect work.

Garments made by operators to be paid for when operator is dismissed, shop committee to be told reason for dismissal.

Belts, motors and shafting to be kept covered.

Experienced employees must be union members, and new employees must after 21 days become members.

Certain holidays to be observed.

New garments or experiments on new machines to be time work, operators to receive their average earnings plus 10 per cent to the extent of two dozen garments.

Operators to be paid scale of piece work prices as set forth in the agreement, but members have right of individually seeking an increase.

Overtime for week workers, time and one-half with double time on Sundays and holidays. For piece workers price and one half for overtime and double price for Sundays and holidays.

Union to supply experienced help when same is required.

Operators taken from their regular work for temporary time work, average piece work earnings plus 10 per cent.

In houses where the perforated pattern is used, minimum wage for cutters to be \$41 per week. One apprentice for first cutter and one for each additional three. Apprentice's wage per week: first year, \$15 and \$18; second year, \$21.50 and \$26; third year, \$31; fourth year, \$3. All other occupations are under piece work rates.

**Construction**

ST. JOHN, N.B. — GRANITE STREET PAVEMENT AND CONSTRUCTION COMPANY, AND PAVING CUTTERS' UNION, No. 115. Agreement to be in effect from June 1, 1923 to January 1, 1924, with three months' notice of change.

Wages for piece workers according to dimensions of blocks, with special rates for flange blocks. Company to provide tools. Day work to be at rate of \$1 per hour, eight hours per day, with four hours on Saturdays.

Only union men to be employed or those eligible to become so.

QUEBEC, QUE. — BRODIES' LIMITED, QUARRY OWNERS, AND PAVING CUTTERS' UNION, No. 142. Agreement effective from January 29, 1923, to January 29, 1924, and from year to year unless three months' notice is given.

Wages for piece work, according to dimensions of blocks.

Day work, per hour, 87½ cents, 44 hours per week.

Price for any other size blocks to be adjusted between the parties.

Company to provide tools.

Only union men to be employed or those eligible to become so.

Branch secretary to be informed if company desires increase of staff, and to make it known throughout the union. Company not to employ more men than can be kept in steady work.

PEMBROKE, ONTARIO. — CERTAIN LOCAL EMPLOYERS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 2466. Agreement to be in effect from June 1, 1923 to May 30, 1924.

Hours per day, outside 9; inside, 10. No men working under the agreement to work after hours for any other contractor or private party.

Minimum wage, per hour, outside work, 65 cents; inside work, 50 cents (inside carpenters and woodworking machine operators with three or more years' experience). Rate for a man incapacitated by old age or accident to be as agreed upon by himself and employer and approved by the local.

Overtime, time and one-half. Sundays and legal holidays, double time. No work on Labour Day except to save life or property.

Work for employers not signatory to agreement to be 10 cents extra per hour, except for civic or government work.

OTTAWA, ONT.—CERTAIN LOCAL CONTRACTORS AND INTERNATIONAL ASSOCIATION OF OPERATIVE PLASTERERS AND CEMENT FINISHERS, No. 124. Agreement to be in effect from August 1, 1922 until July 31, 1924.

Minimum wage, per hour, 85 cents.

Hours, eight per day, four on Saturdays. Overtime, to 10 p.m., time and one-half. Thereafter and Sundays and holidays, double time. No work on Labour Day.

Foreman, who must be a member of the local, 10 cents extra per hour.

Travelling time to be paid for work outside the city. When men cannot get home every night all expenses including board to be paid to them.

Only one apprentice to be employed at one time, same to be not over eighteen years when starting. Term to be four years.

ST. CATHARINES, ONTARIO.—MASTER PLUMBERS' ASSOCIATION, AND UNITED ASSOCIATION OF PLUMBERS AND STEAM-FITTERS, No. 244. Agreement to be in effect from June 1, 1923 until June 1, 1924, and from year to year unless 3 months' notice is given.

Agreement is identical with the one for the previous year as published in the LABOUR GAZETTE for July, 1922, with

the exception of the minimum wage which is now 90 cents per hour.

The principal conditions are 44 hours' work per week; time and one-half for overtime, double time for Sundays and holidays; only union men to be employed; one apprentice to three journeymen, term being five years.

CALGARY, ALBERTA.—CERTAIN EMPLOYERS AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS No. 38. Agreement to be in effect from May 1, 1923 to April 30, 1924.

Wages per hour, engineers in charge of or operating derricks, setting steel, stone or other structural material, engineers in charge of or operating orange peels, clam shells, cable ways, drag lines or locomotive cranes, 92½ cents. Engineers operating pile drivers, road rollers, tractors, hoists, stone crushers, pumps, concrete mixers or portable boilers, 85 cents, firemen, 65 cents.

Overtime, first four hours, time and one-half; thereafter and holidays, double time.

VANCOUVER, B.C.—CERTAIN LOCAL FIRMS, AND UNITED ASSOCIATION OF JOURNEYMAN PLUMBERS, GAS, STEAM AND SPRINKLER FITTERS AND HELPERS, LOCAL 170. Agreement to be effective from May 14, 1923 until April 30, 1924.

Local to maintain a Plumbers' and Gasfitters' Examining Board of three members, and a Steamfitters' and Steamfitters Helpers' Examining Board of three members, to examine all applications for membership.

Hours per day, eight. Overtime, Sundays and holidays, double time. When working more than one 8 hour shift on any job, men working between 5 p.m. and 8 a.m. to receive regular day scale plus 10 per cent, if it is necessary to work 5 or more such shifts. Members not to work two continuous shifts in any calendar day.

Minimum wage per day, \$8. Joint Conference Board provided for under the International Agreement may set a wage scale for deficient members upon written request.

Minimum wage per day for junior plumber, \$2 less than a journeyman when he starts to use tools, and 50 cents extra per day after each 6 months.

One junior plumber may be employed in each shop having one journeyman and one additional for each additional three. Same provision applies to steamfitters.

A shop may have one plumber's apprentice to a journeyman plumber and one additional for each additional five.

For work outside the city members to receive board and transportation.

Members to furnish a sufficient kit of tools to performs all classes of work. Members are prohibited from furnishing certain other tools.

Wages per day for steamfitters' helpers, \$5. One helper to a journeyman. Steamfitters' apprentices to count as helpers under this section.

One steamfitter's apprentice to a journeyman steamfitter, and one for each five additional journeymen, minimum wages per week being as follows, for first, second, third and fourth six months: \$8; \$10; \$12, \$15. They shall then be examined, and if they pass examination be classed as junior steamfitters.

#### Service: Personal

OTTAWA. — CERTAIN EMPLOYERS AND JOURNEYMEN BARBERS' UNION, No. 704. Agreement effective from May 1, 1923 until April 30, 1924.

Employer displaying a union shop card to employ only union journeymen, if available.

Closing hours to be in compliance with the civic closing by-law.

No work on certain holidays, except where an employer is not a barber, when he may ask one of his journeymen to work from 8 a.m. until noon.

Journeymen to receive full pay for all holidays mentioned in the agreement providing they work the other five days of the week.

Minimum wage per week: \$20, with 50 per cent of all takings over \$31. When off work for one-half day, \$18.50 with 50 per cent of all takings over \$28. When off work for one whole day, \$16.65 and 50 per cent of all takings over \$25. When off work more than a day in one week, 65 per cent of all takings.

A price list is recommended in the agreement.

PETERBOROUGH, ONT. — CERTAIN BOSS BARBERS AND JOURNEYMEN BARBERS' UNION, No. 402. Agreement to be in effect from March 1, 1923 until March 1, 1924.

Hours per day, 11; 8 a.m. until 7 p.m. or until work is finished, except Saturday or nights before a holiday, when work shall be until 10 p.m. One hour to be allowed for each meal.

When holidays fall on Saturdays barbers to work from 8 a.m. until noon, but no work on Christmas Day.

Minimum wage per week, \$20, with one-half of takings over \$30; with \$8 for Saturday.

One-half day off per week, from noon to 6 p.m. During July and August, from noon to 8 a.m. the following morning off.

## RATES OF WAGES AND HOURS OF LABOUR IN BUILDING TRADES CANADA, 1922 AND 1923

---

**T**HE accompanying tables, pages 929 and 930, show rates of wages and hours of labour in eight of the building trades in some twenty-eight cities in Canada for 1923 as compared with 1922, the return in each year being secured for the month of June.

The statistics have been secured from employers as well as from unions, and from agreements or schedules of rates in force. In some instances the reports were secured through officers of the De-

partment or through a local correspondent of the LABOUR GAZETTE,

The statistics continue for the year 1923 the record for these classes given from 1901 to 1922 in Reports 1 to 4 in the series of bulletins on Wages and Hours of Labour, the first three of which were issued as supplements to the LABOUR GAZETTE for March, 1921, September, 1921, and February, 1922, respectively.

---

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1923

**T**HE movement in prices during the month was downward, the average cost of a family budget in terms of retail prices being slightly lower, while the index numbers of wholesale prices calculated by various authorities showed downward tendencies, except the Canadian Bank of Commerce index of exports which was upward.

The family budget in terms of retail prices of foods declined slightly, owing chiefly to seasonal declines in the prices of cheese, butter, and eggs. The average cost of a list of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.17 at the beginning of July as compared with \$10.23 for June; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920 (the peak); and \$7.42 for July, 1914. Cooking eggs and dairy butter showed the largest declines, though cheese, creamery butter, and lard were also lower. The principal advances occurred in potatoes and beef, while evaporated apples and granulated sugar showed smaller advances. The

total budget including food, fuel, and rent averaged \$20.65 for July as compared with \$20.72 for June; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); and \$14.17 for July, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, was lower in July at 153.6 as compared with 155.1 for June; 151.8 for July, 1922; 163.4 for July, 1921; 256.9 for May, 1920 (the peak); and 202.3 for July, 1919.

In the grouping according to chief component material the Vegetable Products group and the Textile group were substantially lower while the Wood Products, the Iron, the Non-Ferrous Metals, and the Animal Products group showed smaller declines. The Chemicals group and the Non-Metallic Minerals group advanced slightly.

In the grouping according to purpose Producers' Goods were substantially lower while Consumers' Goods showed a small decline. The decline in Producers' Goods was due mostly to decreases in Manufacturers' Materials.

In the grouping according to origin, farm products, both vegetable and animal, were lower. Canadian farm products declined substantially, due to decreases in grains and livestock. Goods of marine origin averaged lower. Articles of forest origin were lower, due to decreases in lumber and timber. Articles of mineral origin showed little change, declines in metals being offset by advances in fully manufactured articles.

The index number of wholesale prices in Canada based upon prices of 271 commodities in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 224.7 for July as compared with 226.1 for June; 223.0 for July, 1922; 238.6 for July, 1921; 356.6 for May, 1920 (the peak); and 134.6 for July, 1914. Most of the groups were lower except dairy products and fish which advanced somewhat.

The index number published by the Department since 1910 has been reconstructed back to January, 1919, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913 (LABOUR GAZETTE, June, 1923, pp. 689-695). Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in its three methods of classification and

with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Departmental list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, declined to 151.2 for July as compared with 153.0 for June; 150.7 for July, 1922; 153.3 for July, 1921; 249.7 for July, 1920; and 100.2 for July, 1914. The decline was due chiefly to decreases in grains, livestock, cotton, linseed oil, and turpentine.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, stood at 155 for May as compared with 156 for April; 155 for March; and 154 for May, 1922. Raw materials and producers' goods advanced slightly while consumers' goods, goods produced, goods imported, and goods exported were lower.

The Canadian Bank of Commerce index number for exports rose from 153.78 for June to 154.77 for July, while the number for imports was down from 167.53 for June to 166.57 for July. The combined index of exports and imports was little changed at 160.67 for July as compared with 160.65 for June.

Professor Michell's index number of wholesale prices in Canada based on forty articles, twenty foods and twenty

manufacturers' goods, with prices during 1900 to 1909 as 100, declined to 176.4 for July as compared with 177.2 for June: 165.3 for July, 1922; 269.4 for July, 1920; and 117.3 for July, 1914. The index for foods advanced while that for manufacturers' goods declined.

The table of retail prices and rentals shows the prices at the beginning of July of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite

coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices

Beef continued to advance, sirloin steak being up from an average of 29.3c per pound in June to 29.8c in July. Prices in all provinces averaged higher except in Nova Scotia and New Brunswick. Round steak was up from an average of 24c per pound in June to 24.7c in July. Rib roast and shoulder roast were slightly higher, the former averaging 22.4c per pound and the latter 16c per pound. Veal roast averaged 18.3c per pound in July as compared with 18.2c in June. Mutton was down from an average of 28.5c per pound in June to 28.2c in July. Fresh pork and bacon were unchanged. Boiled ham advanced from an average of 58.7c per pound in June to 59.2c in

July. In fresh fish cod, halibut, and whitefish were slightly lower. Salt cod and salt herrings were also down somewhat. Lard averaged slightly lower at 22.4c per pound.

Fresh eggs averaged 31.2c per dozen in July as compared with 31.5c in June and 33.4c in May. Prices in all provinces averaged lower except in Nova Scotia, Alberta, and British Columbia. Cooking eggs also were lower averaging 27.3c per dozen in July as compared with 29.5c in June and 30.6c in May. Milk was lower at St. Hyacinthe, and Edmonton. Butter was down in the average, dairy from 36.1c per pound to 34.2c and creamery from 40c per pound to 39.3c. The decline was general. Cheese declined in the average from 31.2c per pound in June to 30.1c in July.

Bread was slightly lower at New Glasgow. Soda biscuits showed little change. Flour was down slightly in the average at 4.4c per pound. Rolled oats and rice were steady. Tapioca advanced from 13.4c per pound to 13.8c. Canned vegetables were unchanged. Onions rose from 6.4c per pound in June to 8.5c in July. Potatoes averaged \$1.58 per 90 pounds in July as compared with \$1.47 in June and \$1.29 in May. Prices in all provinces averaged higher. Evaporated apples were up from 18.8c per pound in June to 19.7c in July. Prunes were unchanged. Raisins were slightly lower averaging 22.2c per pound. Canned peaches were down from an average at 32c per tin to 31.6c. Marmalade was slightly lower at 79.5c per four pound tin. Granulated sugar was steady. Tea and coffee were little changed.

Anthracite coal averaged \$17.20 per ton in July as compared with \$17.30 in June. Declines occurred in Charlotte-town, Brockville, and Guelph, while St. Johns, Que., Kitchener, and Woodstock were slightly higher. Bituminous coal was up slightly from an average of \$11.25 in June to \$11.30 in July.

1 Vinegar sold extensively in bottles at higher prices than in bulk

Hard wood, 4 feet long, advanced from an average of \$12.76 per cord in June to \$12.83 in July. Soft wood declined from \$9.57 per cord in June to \$9.43 in July. Coal oil was practically unchanged.

Rent was steady.

#### Wholesale Prices

The following notes give the main points in the movement of wholesale prices during July as shown by the index number of the Dominion Bureau of Statistics, using the classification according to purpose or use.

#### CONSUMERS' GOODS

*Food, Beverages and Tobacco.* — The index fell from 143.9 in June to 143.3 in July. In this group fresh whitefish fell from 25c to 15½c per pound while cod, dry salted, rose from \$5 to \$6 per quintal. Lemons were \$5.75 per case as compared with \$5 in June. Veal was 1c per lb. cheaper being 15c as compared with 16c in June. Butter prices were slightly easier, creamery prints at Toronto being 35c per pound as compared with 37c and creamery solids 34½c in July and 36½c in June. Canadian old cheese rose from 29c to 30c per pound. Granulated sugar de-

clined from \$10.1655 per 100 lbs. in June to \$9.975 in July.

*Other Consumers' Goods.* — The index for this group was unchanged, a decline in clothing being offset by an advance in household equipment. The chief changes in the prices were in men's boots, heavy grain, which were \$2.75 per pair as compared with \$2.90 in June, and box calf \$3.70 instead of \$3.75. Spool silk rose from 75c to 78c per dozen spools. Dinner sets declined from \$15.75 to \$15.

#### PRODUCERS' GOODS

*Producers' Equipment.* — The index stood at 184.4 in July as compared with 184.5 in June.

*Producers' Materials.* — The index for this group was down from 146.6 in June to 143.4 in July. In Building and Construction Materials the index fell slightly. In July it was 169.8 and in June 171.0. This group showed a few changes in lumber prices. Spruce siding at St. John was \$27 in July as compared with \$28 in June. Flooring in British Columbia was \$50, having declined \$5 since June. Other changes in this group were in putty which rose from \$6 to \$6.25 per 100, and in linseed oil which fell from \$1.38 to \$1.20 per gallon. Pressed bricks rose from \$28.50 to \$30 per M. and common plastic from \$15.68 to \$16.50.

In Manufacturers' Materials several sub-groups again recorded change. The index for textiles was 206.6 in July and 210.6 in June. Raw cotton was 29½c per pound as compared with 30 5/8 in June. Raw jute dropped from \$8.66 to \$7.94 per 100 lbs. Raw silk was \$8.35 per pound in July, 60c lower

than the June price. Hessians dropped from \$10.25 to \$8.25 per 100 yards.

The index of materials for the leather industry was 95.9 in July as compared with 98.7 in June. Beef hides were 10c-11c as compared with 11c-12c per pound. Calfskins rose 1c per pound, being 15c-16c instead of 14c-15c. Manufacturers' green hide crops were 44c per pound as compared with 43c.

The index of materials for the metal-working industries dropped to 119.9 from 122.6. Pig iron, basic, was \$30 per ton against \$33 in June. Steel billets were \$46.50-\$52 per ton as compared with \$46.50-\$54. Lead was \$6.50 per 100 lbs. in July and \$6.90 in June. Car axles rose from \$74 to \$80 per ton. Spelter rose from \$7.95 per 100 lbs. to \$8. Solid bare copper wires fell from 21½c to 20½c per pound, brass sheets from 32c to 30c per pound, copper sheets from 23½c to 22¾c, silver from 67c¼c to 63 1/5c per oz., tin ingots from 46c to 45c per pound, solder from 28c to 26½c per pound, and zinc sheets from 10c per lb. to 9½c.

The index of materials for chemical using industries rose to 178.8 from 174.4. Alum was down to \$2.90 from \$3.10 but sulphur rose from \$3 to \$3.25 per 100 lbs.

The index of live animals for the meat packing industries was 105.1 in July and 110.0 in June. Western cattle dropped from \$7.05 to \$6.95 per 100 lbs. Choice steers at Toronto fell from \$8 per 100 lbs. to \$7.60. Hogs, thick smooth, fell from \$8.77 per 100 lbs. to \$8.65 and choice sheep from \$6.75 per 100 lbs. to \$5.60.

The index of grains for the milling and other industries fell from 131.9 to

124.4 Western barley dropped from 53c per bushel to 50c; western oats from 48c to 45c; rye from 79c to 77c; and wheat, No. 1 Manitoba Northern, from \$1.15 to \$1.08.

Miscellaneous producers' materials were practically stationary, the index for July being 155.1 and for June 155.6.

Shorts fell from \$29.50 per ton to \$27. Raw rubber, ribbed, smoked sheets, was 26c per lb. as compared with 27c in June. Turpentine fell from \$1.85 to \$1.60 per gallon, tallow from 8¼c to 7¼c per pound. Flaxseed was \$2.23 per bushel in July and \$2.36 in June. Raw sugar was \$7.15 per 100 lbs. as compared with \$7.03 in June.

### PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

According to the most recent index numbers of foreign prices received in the Department, prices throughout the world during the second quarter of 1923 have shown a general tendency downward, excepting those in countries with a depreciating currency. In Canada and the United States the downward trend is indicated by all the index numbers. In Europe the same is particularly noticeable in the index numbers of Great Britain, Sweden and Spain; and according to the latest information available, generally for May or June, prices in France, Norway, Holland, Belgium, Austria, Bulgaria and Czecho-Slovakia were showing a tendency towards yielding. In Denmark and Switzerland no downward turn of prices has yet appeared. In Poland and

Germany where the currency is depreciating rapidly prices have risen very sharply. In countries in the East, prices have shown a tendency to rise with the exception of those in India.

#### Great Britain

WHOLESALE PRICES. — The Board of Trade index number for June fell 0.4 points or 0.2 per cent below the average for May, reaching 159.4 (1913 = 100), and showing a slighter decline than that of the *Statist* index number. During the month under review, although cereals and meat and fish declined, "other foods" showed the marked increase of 9.5 per cent, so that "all foods" showed an increase of 2.1 per cent. All groups of industrial materials except cotton declined, the index for materials declining 1.6 per cent.

The *Statist* index number, in continuation of Sauerbeck's figures, was 127.9 at the end of June, showing a decline of 3.2 per cent from the May level, and of 6 per cent from the level in June, 1922. This level is the same as at the end of September last, and is the lowest since the end of the war. Falling prices in the last two months of this period counterbalanced the rise

in prices of the previous seven months. During June last all food groups declined, making a decline in all foodstuffs of 5.3 per cent. In materials there was a decline of 1.9 per cent, minerals and sundries falling while textiles showed an advance of one-tenth of one per cent.

The *Economist* index number at the end of July showed a continuance of the recent decline. The new level is 190.1 (1901-05=100), which is the lowest point reached by this index number since early

in the war. The previous low point was the 190.4 registered in September, 1922, since when there has been a rise to 201.8 followed by the recent decline. In the month under review, all groups declined with the exception of cereals and meat, which advanced about 0.5 per cent.

COST OF LIVING. — The index number of the cost of living compiled by the Ministry of Labour on the base July, 1914=100, was 169 at the end of June (July 1 falling on Sunday), thus show-

ing no change from the figure for June 1. Foods showed an advance of 2 points to 162, owing to a seasonal advance in potatoes, new potatoes having displaced old ones. Eggs were dearer, sugar, cheese, butter, bacon, fish and some meats slightly cheaper, and flour, bread, tea, milk and margarine showed no change. Clothing and fuel and light declined slightly, and rent and sundries showed no change.

## Austria

WHOLESALE PRICES.—An index number Statistische Nachrichten. The series is

calculated on the base July, 1914 = 1, and is an unweighted average of relative prices of important articles; 45 in March and 47 in April and May. The index number for the above three months is as follows: March, 18358; April, 18059; May, 17896. The index is also published as the unweighted average price per kilogram of the same commodities.

COST OF LIVING. — The index number of the Paritätische Kommission (July,

1914=1) of cost of living at Vienna showed for June an increase of only 1 per cent on the figure for May. Foods showed an increase of 2 per cent to 14,132 and clothing an increase of 1 per cent to 15,323.

Rent increased 43 per cent to 496, owing to the increased cost of upkeep, which according to the calculation of the Federal Rent office was 250 times the pre-war level. Heating and lighting declined 5 per cent during the month.

## Belgium

WHOLESALE PRICES.—The index number calculated by the Ministry of Industry and Labour (April, 1914=100) fell six points to 474 in May, the same level as that of February. During the month, the chief declines were in tar and its products, metal products, glass products, resin products, and raw rubber. The largest increase was in food products. Other groups varied little or showed no change.

(d) Following month. (e) Middle of month. (f) 230 commodities, 1890-1899; 272, 1910-1914; from 1915, 271. number (38 commodities and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included.

RETAIL PRICES. — The index number for the Kingdom, (April, 1914=100) which had been rising since the beginning of the year, was 419 in June, 6 points or 1.4 per cent higher than in May, and the highest since February, 1921. The weighted index of 30 foods rose 2.5 points during the month to 417 for June.

## France

WHOLESALE PRICES.—The index number of the Statistique Générale (1901-

10=100) as stated last month rose to 472.1 at the end of June. Industrial materials showed practically no change, a decrease in the minerals and metals group counterbalancing an increase in textiles. Foods increased 1.2 per cent to 450.2. The only group contributing, however, was vegetable foods, influenced by the substitution of new potatoes for old. If the price of potatoes had been unaltered for June, the index for all foods and the general index would

both have shown slight declines from the May levels.

RETAIL PRICES. — The index number of retail prices of 13 articles in the chief cities of France, on the base 1910=1000 rose in the second quarter of 1923 to 3387, a level 6.7 points or 2 per cent above that of the first quarter.

## Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office (1913=1) was 19,385 for the monthly average of June, as compared with 8170 for May, an increase of 137 per cent. All groups more than doubled during

the period. The weekly index at July 3, the latest available, stood at 33,828, or 175 per cent of the average for June. Since then the mark fell more and more rapidly in value and by the end of July its exchange value was about one million to the dollar.

COST OF LIVING. — The official index number of the cost of living (food, rent, heat, light and clothing) compiled by the Federal Statistical office was 7650 for June (1913/14=1), as compared with 3816 in May, the increase for the month being 100.5 per cent. The increase shown by the index without clothing was 98.2 per cent that of foods alone

was 102.3 per cent, to 9347, while clothing alone rose 109.6 per cent to 11995. Since April, 1923, when the present rise began the index has been calculated weekly. The latest information available showed that the index of cost of living for the week July 2—8 was 16,180.

#### Italy

WHOLESALE PRICES.--The index number compiled by the Chamber of Commerce and Industry at Milan for June fell .66 per cent from the level of May. The principal decreases were: animal foods, 1.1 per cent; 2.1 per cent in minerals and metals; and 4.17 per cent in mis-

cellaneous vegetable products. The increases were slight, and were in textiles, chemical products, and miscellaneous vegetable products.

#### India

COST OF LIVING. — The official index number of the Bombay Labour Office showed a further decline of 2 points in June to 151 (July, 1914=100). All foods fell 2 points to 146, clothing fell 3 points to 205, and fuel and lighting and house rent showed no change, remaining at 164 and 165 respectively. The cost of living for June was 22 per cent below the high level of October

1920, having fallen almost to the level of July, 1918.

### United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics declined 1.9 per cent from May to June, reaching the level of 153. This is 3 points, or 2 per cent, higher than the level of June, 1922. During the month under review the largest decreases were shown by building materials and metals. All other groups showed declines with the exception of house furnishing goods, which showed no change from the previous month's level.

The index number of the Federal Reserve Board showed for June a decline of 3 points or 1.8 per cent, reaching 164 on the base 1913=100. Goods produced fell 3 points (although goods exported rose 3 points) and goods imported fell 4 points. Raw materials fell 5 points to 171; producers' goods fell 3 points to 164, and consumers' goods fell 1 point to 157.

Dun's index number for August 1 showed its fourth successive monthly decline, reaching \$186.675 or 1.1 per cent below the level of July 1. The price decline during the month under

month up to end of 1920; beginning of month thereafter. (e) Beginning of month. (f) Base is average for six.

review affected the clothing, meats, "other food" products, metals and miscellaneous groups. Breadstuffs and dairy and garden produce rose somewhat. Prices at August 1 were 7.6 per cent higher than a year before, but at that time the tendency was upward, and prices have receded 3.4 per cent since April of this year.

**COST OF LIVING.** — The official index number of cost of living compiled by the Bureau of Labour Statistics showed

for June the following percentages of increase from the level of 1913: food, 44.3; clothing, 74.9; housing, 63.4; fuel and light, 80.6; furniture, 122.2; miscellaneous, 100.3; total, 69.7. Thus with the exception of the miscellaneous division which showed no change from the figure for March, and fuel and light, which showed a decline of 5.6 points, every item in the budget was higher in June than in March. The total cost of living index showed an increase of 0.5 per cent for the period.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923

**I**NFORMATION received by the Department for the second quarter of 1923 shows 343 fatalities in the industries and trades of Canada during that period as compared with 305 in the previous quarter and 270 in the corresponding quarter of last year. Figures by months for the first half of the current year and for the corresponding period of 1922 are given in the following table:

	1922	1923
January .....	53	96*
February .....	58	121*
March .....	65	88*
April .....	96	106
May .....	80	124
June .....	94	112
Total .....	446	647

\*Revised figures; 14 fatalities which occurred earlier in the year, one in January, three in February and ten in March, were reported during the quarter.

During the quarter there were 87 fatalities reported in the transportation

and public utilities group 47 of which occurred on the steam railways. In the logging group there were 59 fatalities; in mining, non-ferrous smelting and quarrying, 44; in construction, 38; in manufacturing, 35; and in agriculture 34. In the steam railway service 22 deaths were due to being struck by, run over or crushed by or between cars and engines. In the logging group 16 river drivers lost their lives by drowning and 12 deaths were caused by falling trees. In the mining group 19 deaths were caused by falls of rock, etc. 3 were due to explosives and 2 to asphyxiation. In the manufacturing group, 6 deaths were due to being caught in machinery, and in agriculture horses were responsible for 14 deaths. Electricity was the cause of eleven industrial fatalities during the quarter.

The following table has been prepared from information received from all sources available, but it does not necessarily include all the fatal industrial accidents that may have occurred.

### FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923.

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE—</b>				
Farmer .....	Puslinch, Ont.....	April 9 .....		Struck by falling tree.
Gardener .....	Croton, Ont.....	" 12 .....		Crushed beneath falling wall.
Farmer .....	Sperling, Man.....	" 13 28 .....		Burned when can of gasoline ignited from backfire of engine.
Farmer .....	Crescent Beach, B.C.....	" 18 .....		Struck by falling branch while trimming tree.
Farmer .....	Calgary, Alta.....	" 23 50 .....		Thrown from wagon when horses bolted.
Farmer .....	Arden, Man.....	" 24 .....		Drowned in flooded creek.
Farmer .....	South Indian, Ont.....	" 27 51 .....		Kicked by a horse.
Farmer .....	Ponteix, Sask.....	" 27 .....		Caught in discing machine when horses bolted.
Farmer .....	Musquash, N.B.....	May 1 .....		Drowned in attempt to save stock during floods.
Farmer .....	Pieton, Ont.....	" 8 .....		Pierced by plowpoint. Fell when horses bolted.
Farmer's wife.....	Maple Creek, Sask.....	" 4 .....		Thrown from harrow cart onto harrows when team bolted.
Market gardener.....	McLean, Sask.....	" 3 62 .....		Automobile overturned.
Farmer .....	Belleville, Ont.....	" 7 35 .....		Horses ran away.
Farmer .....	Robsart, Sask.....	" 14 .....		Poisoned. Carried tobacco in same pocket as powdered strychnine.

Farmer .....	Island Brook, Que.....	" 15	77	Delayed blast.....
Employee .....	" .....	" 16	26	Kicked by horse.
Farmer .....	Sault Ste. Marie, Ont.....	" 18	.....	Gored by a bull.
Farmer .....	New Finland, Sask.....	" 19	.....	Fell over dashboard and was dragged through slough by runaway horses.
Farmer .....	Hanna, Alta.....	" 19	.....	Crushed under horse which fell over tongue of wagon while being unhitched.
Farmer's son .....	Aneroid, Sask.....	" 22	17	Caught in rope when lassoing horse which bolted.
Farm hand.....	Brantford, Ont.....	" 25	60	Thrown from manure spreader.
Farmer .....	Gladstone, Man.....	" 30	.....	Thrown from wagon.
Farmer .....	McLeod, Alta.....	June 4	.....	Drowned. Wagon and team swept off road by swollen river.
Farmer .....	Turtleford district, Sask.	" 4	.....	Thrown under discing machine when horses bolted.
Farm hand.....	Penzance, Sask.....	" 7	.....	Struck by lightning.
Farmer .....	Pictou, N.S.....	" 11	.....	Kicked by horse.
Farm woman.....	Smith's Falls, Ont.....	" 13	42	Thrown from wagon when horses bolted.
Farmer .....	Major, Sask.....	" 19	59	Fell under ploughshare.
Rancher .....	Castle River, near Cowley, Alta.....	" 15	.....	Drowned while crossing river.
Farmer .....	Queensville, Ont.....	" 19	43	Crushed by falling timber while wrecking barn.
Farm hand.....	North Regina, Sask.....	" 27	.....	Crushed under disc plough.
Farmer .....	Kitchener, Ont.....	" 27	17	Gored by a bull.
Farmer.....	Woodstock, Ont.....	" 21	43	Struck by falling pump when in well, chain slipped.
Farmer.....	Goderich, Ont.....	" 30	72	While alighting from load of hay at front of wagon, horses bolted.
<b>Logging—</b>				
Rigging slinger.....	Call Creek, B.C.....	April 4	55	Struck by falling snag.
Logger .....	Campbell River, B.C.....	" 4	28	Struck by falling snag.
Logger .....	Quatsino, B.C.....	" 5	21	Struck by choker hook which caught on limb.
Logger .....	Granite Falls, B.C.....	" 10	45	Crushed between log and stump when log slid down hill.
Woodsman .....	Powell River, B.C.....	" 12	.....	Caught between donkey engine and log shute.
Hook tender.....	Hotham, Sound, B.C.....	" 13	.....	Struck by boom stick which swung around when struck by log.
Logger .....	New Westminster, B.C.....	" 13	.....	Struck by rock from blast.
Brakeman on logging train	Cowichan, B.C.....	" 16	.....	Crushed by log which slipped from cable.
Logger .....	Chemainus, B.C.....	" 16	20	Slipped while getting off logging train.
Woodsman .....	Tara, Ont.....	" 17	50	Struck by falling tree.
Chokerman .....	Buckley Bay, B.C.....	" 18	20	Struck by falling tree.
Chokerman .....	Buckley Bay, B.C.....	" 23	18	Struck by falling tree.
Logger .....	Shawinigan Lake, B.C.....	" 25	.....	Falling tree struck dead wood which fell on man.
Logger .....	Victoria, B.C.....	" 25	35	Struck by falling tree.
Logger .....	Masset Inlet, B.C.....	" 26	19	Struck by falling tree.
Rigging slinger.....	Alert Bay, B.C.....	" 26	27	Struck by slab which up-ended when coming in on the skyline.
Logger .....	Brittall Point, B.C.....	" 27	17	Crushed between logs.
Logger .....	Salmon Arm, B.C.....	" 30	25	No particulars.
River driver.....	St. Frances, Que.....	" 30	.....	Drowned during floods.
Logger .....	Headquarters, B.C.....	" 30	35	Struck by falling tree.
Labourer .....	Nestorville, Ont.....	May 3	30	Drowned.
Workman on logging truck	Loughboro Inlet, B.C.....	" 7	45	Crushed by truck which was being cranked while in gear.
Woodsman .....	North Co., N.B.....	" 4	21	Fell from landing of logs.
River driver.....	Newcastle, N.B.....	" 4	.....	Fell off brow of log drive.
Woodsman .....	Campbell River, B.C.....	" 4	28	Struck by falling snag.
Logger .....	Lynn Creek, B.C.....	" 5	51	Struck by falling tree.
Logger .....	Dean Lake, Ont.....	" 5	22	Drowned.
River driver.....	St. George, N.B.....	" 6	.....	Drowned during floods.
Logger .....	Eberts, B.C.....	" 7	.....	Crushed under rolling timber.
River drivers (3).....	Great Falls, N.B.....	" 11	.....	Boat upset in rough waters, drowned.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality :
LOGGING—(Continued)—				
River driver.....	Thessalon River, Ont....	" 13	20	Drowned.
Timber packer.....	Blairmore, Alta.....	" 16	37	Caught between cars.

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<b>COAL MINING—(Continued)</b>				
Miner .....	New Waterford, N.S.....	" 23	.....	Struck by a trip.
Miner .....	New Waterford, N.S.....	" 23	.....	Struck by fall of stone.
Miners (2) .....	Sydney, N.S.....	" 25	.....	Fall of rock.
Fireman .....	Sydney Mines, N.S.....	" 25	.....	Ankle caught in coal conveyor, shock.
Carpenter .....	New Waterford, N.S....	" 25	48	Struck by run-a-way trip while repairing a greaser.
Pitman .....	Tofield, Alta.....	" 29	34	Struck by piece of frozen clay from edge of pit.
Miner .....	Cumberland, B.C.....	June 4	42	Struck by coal from roof.
Driver .....	Nanaimo, B.C.....	" 4	19	Crushed between loaded car and upright of shaft.
		" 4	over 21	
Miner .....	Comox, B.C.....	.....	over	Struck by falling tree.
Miner .....	Comox, B.C.....	" 4	21	Struck by falling rock.
Timberman .....	Luscar, Alta.....	" 1	37	Asphyxiated—fall of coal.
Miner .....	Stellarton, N.S.....	" 21	40	Fall of stone from roof.
Miner .....	Stellarton, N.S.....	" 6	.....	Struck by falling coal.
<b>Non-metallic mineral mining and quarrying:</b>				
Workman at oil well.....	Enniskillen Township, Ont. ....	April 17	31	Pulley on derrick came loose and fell.
Labourer .....	Yale Pit, B.C.....	May 18	50	Buried under gravel slide.
Workman .....	Asbestos, Que.....	June 12	23	Crushed by falling machine during construction of new mill.
Foreman at gravel pit.....	Lemberg, Sask. ....	" 30	.....	Hand, car struck by freight train.
<b>Clay products and structural materials:</b>				
Workman at cement plant..	Tuxedo, Man.....	April 3	34	Explosion of blowtorch used to repair pump.
Employee at brick yards....	Milton, Ont.....	" 26	.....	Caught in elevator belt when placing it on moving shaft.
Employee at stone works..	Stonehaven, N.B.....	May 29	63	Scalded by steam escaping from broken pipe.
Employee at cement plant..	Tuxedo, Man.....	June 7	32	Caught in machinery belt.
Employee at cement plant..	St. John, N.B.....	" 16	29	Collapse of wall of excavation.
<b>MANUFACTURING—</b>				
<b>Vegetable foods, drink and tobacco:</b>				
Employee of cheese factory	Belleville, Ont.....	May 7	35	Thrown from wagon when horses bolted.
Proprietor of bottling works	Fort William, Ont.....	" 23	.....	Thrown from delivery rig.
Shipper with chocolate company .....	Toronto, Ont.....	June 4	23	Struck by tub of cream.
<b>Animal edible products:</b>				
Engineer at packing plant.	Winnipeg, Man.....	May 17	41	Electrocuted while repairing electric motor, the frame of which was not grounded.
<b>Textiles:</b>				
Sweeper at cotton factory..	Hamilton, Ont.....	June 26	16	Neck caught by elevator cage and guard gate.
<b>Rubber goods:</b>				
Employee at rubber factory.	St. John, N.B.....	May 31	.....	Crushed in elevator shaft.
<b>Printing and publishing:</b>				
Printer .....	Montreal, Que.....	June 19	19	Fell down elevator shaft.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING —(Continued)</b>				
<i>Pulp, paper and paper goods:</i>				
Millwright at pulp mill....	Kapuskasing, Ont.....	June 14	39	Caught in machinery.
Employee of waste paper company .....	Toronto, Ont.....	" 14	30	Crushed between car and truck while loading at freight sheds.
Beaterman .....	Ocean Falls, B.C.....	" 22	41	Weight being replaced on automatic stretcher fell on foot—infection.
Employee at paper mill....	Cornwall, Ont.....	" 29	24	Struck by piece of lumber, which fell from pile.
Pulp trucker at paper mill..	Sturgeon Falls, Ont....	" 30	.....	Crushed between pulp piles.
<i>Saw and planing mills:</i>				
Employees at sawmill (2)..	Richardville, N.B.....	May 24	.....	Burned in fire which destroyed building.
Employee at sawmill.....	Eburne, B.C.....	June 1	.....	Drowned while dragging logs from river.
Employee at sawmill.....	Arnprior, Ont.....	" 23	.....	Caught in drive belt.
Employee at lumber mill...	Grand Falls, N.B.....	" 20	.....	Struck by piece of lumber.
<i>Wood products:</i>				
Boomman at shingle factory	Port Alberni, B.C.....	April 18	.....	Drowned.
Woodworker .....	Galt, Ont.....	May 15	47	Nose scratched by splinter of wood from saw and meningitis developed.
Night foreman and watchman at sawdust company.	Montreal, Que.....	" 23	.....	Explosion in sawdust room. Burned in fire.
Employee at veneer mill....	Carmel, Ont.....	June 4	15	Clothing caught in shafting.
<i>Iron, steel and products:</i>				
Superintendent of blast furnace .....	Sydney, N.S.....	April 1	.....	Ran over by engine. Caught in shafting.
Employee of steel works....	Hamilton, Ont.....	" 10	.....	Fell off footboard of engine.
Employee of metalworks....	Peterboro, Ont.....	" 21	.....	Electrocuted. When testing transformer touched an exposed testing cable.
Labourer at stove factory.	London, Ont.....	" 26	43	Caught in shafting.
Employee at machine shop	Montreal, Que.....	" 29	50	Electrocuted while covering skylight with tarpaulin.
Car repairer.....	McAdam, N.B.....	May 1	.....	Struck by handle of hydraulic jack.
Labourer .....	Sydney, N.S.....	" 14	25	Stepped into rolls while watching an overhead crane.
Blacksmith .....	Blairmore, Alta.....	June 8	53	Skull fractured when shoeing horse.
<i>Non-ferrous metal products:</i>				
Employee at enamel ware factory .....	London, Ont.....	April 26	43	Clothing caught in machinery.
<i>Chemical and allied products:</i>				
Foreman at soap factory..	Maisonneuve, Que.....	April 2	60	Cable broke letting elevator fall.
Employee of cyanamid plant	Niagara Falls, Ont.....	" 22	54	Fell from incline trestle.
Representative of medicine company .....	Ponoka, Alta.....	May 2	57	Kicked by a horse.
Labourer at glue factory...	Ford, Ont.....	" 26	.....	Became faint and fell from scaffold.
<b>CONSTRUCTION—</b>				
<i>Buildings and structures:</i>				
Carpenter .....	Quebec, Que.....	April 27	55	Fell from scaffold.
Labourer .....	Ottawa, Ont.....	May 7	40	Wall collapsed while being moved.
Carpenter .....	Ottawa, Ont.....	" 23	63	Fell from scaffold.
Labourer .....	Ottawa, Ont.....	June 4	56	While removing scaffolding plank turned under foot causing fall.
Labourer .....	Guelph, Ont.....	" 4	.....	Fell from scaffold.
Painter .....	Antigonish N.S.....	" 18	.....	Struck by falling plank.
Labourer .....	Toronto, Ont.....	" 23	.....	Stepped on nail.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause or Fatality
<b>MANUFACTURING—(Continued)</b>				
<i>Railway construction:</i>				
Carpenter and cranesman (2)	Bridge 80.69, Estevan Siding, Sask.....	April 17	43 and 45	Drowned when crane toppled over into water.
Bridgeman .....	St. Jean, Man.....	" 20	18	Lost footing—drowned.
Labourer with railway company .....	Fort William, Ont.....	May 30	19	Drowned.
Labourer .....	Benton, B.C.....	" 28	23	Struck by flying rock from blast.
Labourer .....	Jackfish, Ont.....	June 15	15	Ruptured. (No particulars).
Labourer .....	Durham, Ont.....	" 20	30	Struck by train.
Workman on turntable in yards .....	Calgary, Alta.....	" 27	29	Smothered when earth wall caved in.
Workman in tunnel.....	Schreiber, Ont.....	" 16	16	Explosion of dynamite while blasting rocks.
<i>Shipbuilding:</i>				
Steel caulker.....	North Vancouver, B.C..	May 28	52	Fell into ship's bilge while repairing oil tank, drowned.
<i>Miscellaneous construction:</i>				
Carpenter at dam.....	Stave Falls, B.C.....	April 19	19	Fell from staging.
Tester at engineering plant.	Toronto, Ont.....	" 21	24	Electrocuted.
Roadmaster .....	Morden, Man.....	" 25	25	Motor car derailed.
Bridgeman .....	Toronto, Ont.....	" 26	26	Fell off derrick.
Workman at viaduct on wharf .....	Quebec, Que.....	June 27	27	Fell from scaffold and struck head against railing.
Labourer .....	Cochrane, Ont.....	May 12	38	Drowned.
Workmen (2).....	Lake St. John, Que.....	" 24	24	Struck by steel rope which broke while operating arms of dredge.
Labourer .....	Vancouver, B.C.....	" 26	40	Electrocuted, while working on derrick chain struck high tension wire.
Labourer .....	Port Colborne, Ont.....	June 5	23	Fell into ship's hold.
Labourer .....	Winnipeg Man.....	" 7	33	Caught in bucket conveyor and crushed between buckets and frame work.
Well driller.....	Islay, Alta.....	" 11	26	Struck by rod which fell from its fastenings.
Workmen at trench construction (3).....	Hamilton, Ont.....	" 21	48 44 30	Dynamite explosion.
Labourer (municipal).....	North Bay, Ont.....	" 11	11	Cave in of gravel in trench.
Fireman .....	Fort William, Ont.....	" 26	26	Fell into hopper.
Bridgeman .....	Charlemagne, Que.....	" 7	28	Fell from bridge.
Contractor .....	Oakshella, Sask.....	" 15	15	Burned while rescuing team from stable.
Lbouser (municipal).....	Cobalt, Ont.....	" 11	11	Earth in trench caved in while constructing storm sewer.
Workman at dam.....	Chicoutimi, Que.....	" 19	19	Injured in head. (No particulars).
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam Railways:</i>				
Fireman .....	Island Pond, Vt., U.S.A.	April 1	1	Collision of switch train and way-freight.
Yard foreman.....	Point St. Charles, Que..	" 1	41	Caught between cars.
Employee at coal dock.....	Island No. 1, Toronto, Ont.....	" 2	37	Fell from elevation.
Sectionman .....	Shelbrook Sd. Sask.....	" 2	30	Fell off motor car.
Employee .....	Fort William, Ont.....	" 2	2	Fell off plank.
Sectionman .....	Rideau Station, Ont.....	" 4	36	Struck by train.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—(Continued)				
Fireman .....	West Toronto, Ont.....	" 4	51	Struck by train.
Carman .....	Melville, Man.....	" 7	43	Struck by engine.
Fireman .....	Newcastle, N.B.....	" 8	28	Fell from cab of engine.
Fireman .....	Moncton, N.B.....	" 9	25	Crushed between cars.
Watchman .....	Walkerville, Ont.....	" 10	59	Struck by switch engine in attempt to warn motorists.
Fireman .....	Winnipeg, Man.....	" 10	40	Run over by locomotive.
Car checker .....	Englehart, Ont.....	" 12	35	Struck by train.
Brakeman .....	Marysville, Ont.....	" 16	23	Fell off train.
Sectionman .....	Edmonton, Alta.....	" 17	40	Run over by backing engine.
Engineer .....	Mill 115, Algoma Central Railway, Ont.....	" 20	43	Derailment due to snowslide.
Brakeman .....	Edmonton, Alta.....	" 21	27	Crushed. Foot caught while uncoupling cars.
Roadmaster .....	Morden, Man.....	" 25	.....	Derailment of speeder.
Brakeman .....	Windsor, Ont.....	" 26	.....	Struck by engine.
Fireman .....	Tannin, Ont.....	" 27	26	Engine went through pile bridge.
Fireman .....	Winnipeg, Man.....	April 10	43	Fell in attempt to board moving train.
Sectionman .....	Robert-Heron, Siding, Man.....	" 10	27	Cause unknown.
Brakeman .....	Victoria, B.C.....	" 17	.....	Crushed by log while loading.
Roadmaster .....	Morden, Man.....	" 26	.....	Car derailed.
Baggage man .....	Azilda, Ont.....	" 30	.....	Toe bruised.
Brakeman .....	Sechelt, B.C.....	" 30	26	Crushed under log which fell from load.
Telegraph operator .....	Tilbury, Ont.....	May 2	.....	Crushed by motor truck.
Section foreman.....	Fulton, Man.....	" 2	39	Derailment of motor car.
Employee .....	St. Thomas, Ont.....	" 4	29	Fell between cars.
Brakeman .....	Laie au Saumon, Que.....	" 9	30	Run over by train.
Section foreman .....	Alpha, Man.....	" 15	42	Derailment of motor car.
Sectionman .....	McGivney Jet., N.B.....	" 15	38	Struck in abdomen by crowbar.
Sectionman .....	Portage la Prairie, Man.....	" 16	.....	Thrown from speeder which struck stick thrown across track.
Sectionman .....	Beavermouth, B.C.....	" 26	35	Struck by train while removing hand car from track.
Sectionman .....	Ingersoll, Ont.....	" 26	58	Run over by train.
Brakeman .....	Keremeos, B.C.....	" 16	24	Engine struck standing cars breaking flues in boiler—burned.
Yardman .....	London, Ont.....	" 28	.....	Crushed by car while making coupling.
Labourer .....	Jellcoe, Ont.....	" 30	41	Caught in shafting.
Ledgerwood operator .....	Vancouver, B.C.....	" 30	17	Fell from train and run over.
Steam shovelman .....	McMurphy, B.C.....	" 30	21	Fell from train and run over.
Sectionman .....	Moose Jaw, Sask.....	June 3	.....	Struck by lightning.
Trackman .....	Hamilton, Ont.....	" 8	.....	Struck by train.
Pumpman .....	Wilkie, Sask.....	" 15	55	Stepped in front of moving train.
Employee .....	Windsor, Ont.....	" 20	.....	Struck by train.
Yardman .....	Moncton, N.B.....	" 20	.....	Sunstroke.
Yardman .....	Cornell, Ont.....	" 26	.....	Struck by train.
Brakeman .....	Lanigan, Sask.....	" 30	30	Collision between track motor and train.
Electric Railways:				
Fireman on electric crane..	Toronto, Ont.....	June 11	25	Fell into drum while adjusting it.
Foreman of repair gang.....	St. Catharines, Ont.....	" 8	.....	Crushed by pole of car.
Lineman .....	Ottawa, Ont.....	" 25	.....	Electrocuted.
Water transportation:				
Wheelsman with steamship.	Sarnia, Ont.....	April 29	.....	Asphyxiated.
Repairman on vessel.....	Vancouver, B.C.....	May 28	.....	Fell into oil tank.
Launchman .....	Esquimalt, B.C.....	June 7	43	Drowned. Thrown into water when legs caught in hawser attached to scow.
Longshoreman .....	Hamilton, Ont.....	" 10	30	Fell into hold of vessel.
Longshoreman .....	Montreal, Que.....	" 13	48	Fell into hold of vessel while carrying an unwieldy packing case.
Ferryman .....	Nipawin, Sask.....	" 11	.....	Drowned. Ferry apparatus failed to work, causing flood.
Sailor .....	Ville Lasalle, Que.....	" 17	19	Drowned. Fell into water while casting a cable from deck to bitt at wharf.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1923—(Continued).

Trade or Industry	Locality	Date	Age	Cause or Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—(Continued)</b>				
Ship Loader.....	Port Alfred, Que.....	" 23	.....	Crushed under a load of pulp.
Fireman on vessel.....	Lake Erie, Ont.....	" 11	.....	Struck by falling ash bucket.
Ferryman.....	Ravine Ferry, Sask.....	" 30	30	Drowned. Fell off ferry.
<i>Storage and local transportation:</i>				
Workman .....	Fort William, Ont.....	April 2	36	Plank slipped causing fall, while repairing conveyer.
Truck driver.....	Calgary, Alta.....	" 4	22	Train struck truck causing gasoline tank to explode.
Grain elevator operator...	Elgin, Man.....	" 9	42	Clothing caught in machinery.
Teamster .....	Merritt, B.C.....	" 11	31	Crushed by lumber which fell from truck.
Teamster .....	Hamilton, Ont.....	" 20	.....	Illness contracted due to wet clothing.
Teamster .....	London, Ont.....	" 22	.....	Knocked down by horse while singeing its throat.
Taxicab chauffeur.....	Montreal, Que.....	" 28	.....	Murdered by passenger.
Truck driver.....	Quebec, Que.....	" 29	33	Fell from wagon when wheels of moving van caught in rut.
Cartage man.....	Montreal, Que.....	May 2	55	Fell down stairs while carrying a heavy box.
Driver .....	Belleville, Ont.....	" 9	.....	Thrown from wagon when team bolted.
Truck driver.....	Wingham, Ont.....	" 11	36	Struck by a freight train.
Teamster .....	Hamilton, Ont.....	" 14	.....	Fell from wagon.
Teamster .....	Hartford, Sask.....	" 29	.....	Fell from load of logs.
Loader at grain elevator...	Port Colborne, Ont.....	June 5	.....	Fell into hold of steamer.
Teamster .....	Thames, Ont.....	" 15	38	Team bolted while man stood on tongue of wagon adjusting harness.
Mail carrier.....	Forty Mile, Yukon Territory .....	" 28	28	Drowned while fording horses across bar.
Labourer .....	St. Vincent de Paul, Que.	" 22	.....	Fell from car when load shifted.
<i>Telegraphs and telephones:</i>				
Telephone lineman.....	Exeter, Ont.....	May 18	23	Electrocuted. Telephone wire became entangled in high tension wire.
Telephone lineman.....	Brockville, Ont.....	" 22	30	Derailment of speeder at switch.
Telephone lineman.....	Coughnawaga, Que.....	" 31	35	Struck by train.
Telegraph lineman.....	Wallacburg, Ont.....	June 26	23	Struck by train while at ground work.
<i>Public utilities, n.e.s.:</i>				
Power house employee....	Montreal, Que.....	April 20	61	Electrocuted. Backed against high tension wire while sweeping in transformer room.
Student with electrical company .....	Toronto, Ont.....	" 29	25	Fell from ladder. Believed to have touched live wire.
Patrolman .....	White Plains, Man.....	May 15	.....	Electrocuted.
Lineman .....	Guelph, Ont.....	" 5	29	Fell off pole when support belt's stitching gave way.
Lineman .....	Toronto, Ont.....	June 24	37	Electrocuted.
Repairman with electrical company .....	Britannia, Ont.....	" 25	36	Electrocuted. Presumed to have touched live wire.
<b>SERVICE—</b>				
<i>Public and municipal</i>				
Bridge tender.....	Crescent, B.C.....	April 18	65	Fell from drawbridge while turning span; Drowned.
Constable .....	Drumheller, B.C.....	May 2	35	Fell from running board of car when attempting to arrest men.

Trade or Industry	Locality	Date	Age	Cause or Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—(Continued)</b>				
Municipal foreman.....	St. Thomas, Ont.....	" 3	32	Struck by train.
Fireman .....	Montreal, Que.....	" 23	.....	Burned in fire.
Employees of sewage disposal works (3).....	Melfort, Sask.....	June 4	.....	Gassed by fumes from sedimentation tank.
Repairer of gas main.....	London, Ont.....	" 7	56	Overcome by gas.
Postmaster .....	Ninette, Man.....	" 7	52	Explosion of gasoline engine in basement of building.
Fire fighter.....	Tatnall, Ont.....	" 17	.....	Drowned.
Constables (2).....	North Bay Ont.....	May 17	.....	Shot by paroled prisoner.
		" 30	.....	
<b>Personal:</b>				
Child's nurse.....	Kitchener, Ont.....	April 20	.....	Struck by train while wheeling child.
Window cleaner.....	Sherbrooke, Que.....	" 23	.....	Fell from window.
Janitor .....	St. John, N.B.....	" 20	80	Fell down elevator shaft.
Hotel porter.....	Calgary, Alta.....	June 9	29	Fell down elevator shaft.
<b>Recreational:</b>				
Jockey .....	Montreal, Que.....	June 25	39	Thrown against post when horses fell.
Employee of yacht club.....	Toronto, Ont.....	" 30	.....	Drowned.
<b>TRADE—</b>				
<b>Warehousing:</b>				
Janitor .....	Montreal, Que.....	April 30	71	Shot by burglars.
Warehouseman .....	Fort William, Ont.....	" 16	35	Fell down elevator shaft.
Employee at candy warehouse .....	St. John, N.B.....	" 26	.....	Crushed in freight elevator.
<b>Retail:</b>				
Storekeeper .....	Billings Bridge, Ont.....	April 4	31	Premature explosion when blasting.
Employee of coal company.	Long Branch, Ont.....	" 5	.....	Crushed by a truck.
Employee of coal company.	Montreal, Que.....	" 26	50	Fell from trestle.
Employee of coal company.	Oshawa, Ont.....	May 12	52	Infection.
Employee of store.....	Vancouver, B.C.....	" 27	.....	Fell from fifth storey window.
Employee of coal company.	Collins Bay, Ont.....	June 11	.....	Struck by train.
Elevator operator with auto agency .....	Toronto, Ont.....	" 13	.....	Strain while lifting.
<b>Miscellaneous:</b>				
Foreman .....	Montreal, Que.....	April 2	60	Cable broke on hoist.
Machine feeder.....	Powell River, B.C.....	" 12	38	Struck by piece of pulley which broke.
Labourer .....	Carriden Bay, B.C.....	" 25	.....	Fell overboard from gas boat—drowned.
Fuelman .....	Lumberton, B.C.....	May 4	30	Suffocated under slide of shavings from fuel pile.
Trucker .....	St. John, N.B.....	" 5	37	Crushed by falling auto case.
Labourer .....	Ocean Falls, B.C.....	" 11	29	Car of sand on elevator ran back and fell on workman.
Foreman .....	Ottawa Brook, N.S.....	" 16	.....	Struck by material precipitated from blast.
Labourer .....	Montreal, Que.....	" 16	50	Crushed by heavy case.
Fireman .....	Gloucester Co., N.S.....	" 29	63	Scalded by blow-out pipe.
Engineer .....	Shookumshuck, B.C.....	" 31	32	Track gave way—cart upset.
Labourer .....	Lethbridge, Alta.....	" 31	53	Ruptured while lifting heavy rock for rip-rapping.
Millwright's helper.....	Port Alberni, B.C.....	June 15	30	Caught in machinery trying to stop friction drive.

## SUPPLEMENTARY LIST OF ACCIDENTS DURING THE FIRST QUARTER OF 1923

Trade or Industry	Locality	Date	Age	Cause or Fatality
Trackman .....	Kings Co., N.B.....	Jan. 20	43	Run over by engine.
Millwright .....	Restigouche Co., N.B....	Feb. 25	64	Caught in belt.
Brakeman .....	Orillia, Ont.....	" 6	26	Crushed between engine and caboose of train.
Brakeman .....	Sudbury, Ont.....	" 27	29	Fell under cars.
Labourer .....	St. John, N.B.....	March 1	23	Cave-in of coal pile.
Coal miner.....	Reserve Mine, B.C.....	"	34	Blood poisoning.
Employee at planing mill....	Powell River, B.C.....	" 8	38	Struck by flying pieces of machinery.
Tie loader.....	Forestdale, B.C.....	" 9	44	Fell while carrying railway tie and struck head against tie.
Carpenter .....	London, Ont.....	" 13	42	Silver in eye.
Miner .....	Glace Bay, N.S.....	" 17	.....	Struck by fall of coal.
Farmer .....	Little Pond, P.E.I.....	" 27	over 21	Crushed by falling tree.
Domestic .....	Toronto, Ont.....	" 23	33	Struck by fall of ice from roof.
Logger .....	Kitchener, Ont.....	" 29	40	Struck by falling tree.
Yardman .....	St. John, N.B.....	" 30	43	Run over by cars.

## IMMIGRATION TO CANADA DURING SECOND QUARTER OF 1923

THE following table compiled from information furnished by the Department of Immigration and Colonization gives some details respecting the total number of immigrants into Canada during the second quarter of 1923. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1922 are also given.

The table on page 964 gives the nationality, sex, occupation and destination of all immigrants, who entered Canada during the quarter under review.

## IMMIGRATION TO CANADA DURING THE SECOND QUARTER OF 1923

# THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—H. H. WARD.

Volume 23

SEPTEMBER, 1923

Number 9

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**I**N addition to the regular monthly articles this issue of the **LABOUR GAZETTE** contains an account of the recent conventions of the International Association of Public Employment Services and of the Federation of Catholic Workers of Canada, as well as other special articles on subjects of industrial interest.

**Monthly Summary.** Increased employment was reported by the offices of the Employment Service of Canada during July, 1922, due to the active demands for agricultural workers in the West and for outdoor construction labourers in all districts. Compared with the same month in 1922, a marked improvement was shown in the number of vacancies offered and placements made.

At the beginning of August, the percentage of unemployment among members of trade unions was 2.9 as compared with 3.4 at the beginning of July and with 4.1 at the beginning of August, 1922.

The average cost of the weekly family budget of twenty-nine staple foods was \$10.53 at the beginning of August as compared with \$10.17 in July; \$10.44 in August, 1922; \$11.44 in August, 1921; \$16.92 in June, 1920 (the highest point reached), and \$7.68 in August, 1914. In wholesale prices the index

number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, stood at 153.3 for August, as compared with 153.6 for July; 149.5 for August, 1922; 165.6 for August, 1921; and 256.9 for May, 1920 (the peak).

The time loss due to industrial disputes during August was less than in the previous month and than in August, 1922. Seventeen disputes began or were in progress during the month, involving 3,035 employees, and causing time loss estimated at 36,017 working days. Corresponding figures for the previous month were 21 disputes involving 17,104 employees and a time loss of 310,608 working days, and for August, 1922, 25 disputes involving 25,364 employees with an estimated time loss of 450,692 working days. At the end of August there were 15 disputes in progress involving 1,207 employees.

**Proceedings under the Industrial Disputes Investigation Act.**

Two reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in August. Four applications for the establishment of Boards were received and two Boards were established during the month.

# Recent Changes in Staff of Department of Labour.

Various important changes in the staff of the Department of Labour were recently effected. By an Order-in-Council dated Aug-

ust 27, Mr. F. A. Acland, who had been Deputy Minister of Labour since September, 1908, was relieved of the duties of this office in order that he might be free to apply himself to the duties of King's Printer, an office which he had held since June 15, 1921. By the same Order-in-Council Mr. H. H. Ward, formerly Head Clerk in the office of the Board of Railway Commissioners of Canada, was appointed Deputy Minister of Labour.

By an Order-in-Council dated August 25 Mr. Harry Hereford, Industrial Engineer, of the Department of Labour, was appointed Registrar of the Combines Investigation Act, 1923, which had been placed under the Minister of Labour for administrative purposes. An account of this Act appeared in the July issue of the LABOUR GAZETTE on pages 737 to 739.

# Quebec to appoint Joint Civil Service Committee.

The Provincial Government of Quebec has decided to appoint a commission or committee to inquire into conditions affecting its em-

ployees, this body to include representatives of the Provincial Government Employees' Association. This announcement was made by the Honourable Honoré Mercier, Minister of Lands and Forests, at the fifth annual convention of the Association which was held at Montreal on August 11. The Minister told the members of the Association that they had the right to organize to protect their interests. "The system which governs the employees of the Government of this Province is not satisfactory, either for the employer, the Government or for the employees", he said.

The Convention passed a resolution requesting the Provincial Government to abolish the present system of statutory increases in the salaries of certain civil servants under which salaries have been periodically increased until a certain limit is reached. This system, it was stated, applies only to a limited number of the employees and it was thought that a more equitable arrangement might be made.

# Conference on International Labour Statistics.

A conference of official labour statisticians of the countries which are members of the International La-

bour Organization will open at Geneva, Switzerland, on October 29, 1923, immediately after the close of the Fifth Session of the International Labour Conference. Mr. R. H. Coats, Dominion Statistician, has been authorized to attend the conference on behalf of the Government of Canada. The business of the conference has been limited by the Governing Body of the Organization to the following subjects:

- (1) The classification of industries and occupations for the purpose of labour statistics.
- (2) Statistics of wages and hours of labour
- (3) Statistics of industrial accidents.

# District Organization for Harvesting in Saskatchewan.

As an expedient for securing harvest help in Saskatchewan and in order to retain wages within the Province the Minister in charge of the Provincial Bureau of Labour and Industries addressed an appeal to all local authorities, proposing that municipal officials, boards of trade, grain growers' locals and other public bodies should take into consideration the possibility of a local supply of labour for the harvest fields. He suggested that during the height of the harvest business firms might work shorter hours in

order to release some of their employees for a few days. "In some centres," the letter suggested, "business men might use their cars to transport this temporary help from the homes to the farms, bringing the men back in the evening, thus relieving the farm women from the necessity of providing extra meals for the temporary labour..... It is only necessary to suggest a possible shortage of labour to cause public spirited citizens to immediately organize themselves for the purpose of securing the proper harvesting of the crop and the retention of a maximum amount of benefit from the crop to the people of the district". The Minister also appealed to the farmers to cooperate in arranging for the threshing of their grain so that the threshing season might be prolonged and the available labour enabled to do the work without unduly increasing wages and other overhead costs for harvesting.

**Scholarships granted by Canadian Pacific Railway.**

Two free scholarships, offered by the Canadian Pacific Railway Company, for competitive examination to apprentices and other permanent employees under twenty-one years of age, and to the minor sons of employees, were awarded last month, one to the son of a foreman in the Company's service at Victoria, B.C., and the other to the son of an employee at the Angus railway shops at Montreal. The scholarships confer the privilege of four years' tuition in architecture and chemical, civil, mechanical or electrical engineering at McGill University, Montreal. Certificates were issued to sixteen possible candidates of whom eight presented themselves for examination, and four passed. In addition to these scholarships the Canadian Pacific is now offering a scholarship, covering four years' tuition in the same subjects at l'Ecole Polytechnique of the University of Montreal and another covering a three years' course at l'Ecole de Hautes Etudes Commerciales de Montreal.

These scholarships will be awarded annually.

**Chinese required to register.**

An Order-in-Council (1923-1272) issued under authority of Section 18 of the Chinese Immigration Act, 1923, and printed in the *Canada Gazette* of August 18, contains regulations which require that persons of Chinese origin or descent shall register before a local registrar; Chinese living at a distance from a registrar may, if they so desire, register with the postmaster of their district. Parents or guardians of children of Chinese origin or descent under 13 years of age are to register for such children, the procedure being the same as in all other cases. These children must, however, appear personally before the registrar. A certificate on regular form will be issued to the person who has so registered by the Chief Controller of Chinese Immigration at Ottawa, or the Controller of Chinese Immigration at Vancouver. Where the persons registering so desire, their landing certificates may be attached to the registration form to be forwarded to one of the officials authorized to issue certificates, and this official instead of issuing a certificate of registration will endorse on such landing certificate a statement to the effect that the person whose photograph appears on the certificate has registered. The landing certificate is then to be returned immediately by registered mail to the person who has registered. Persons appearing before the registrar must produce three untouched and unmounted copies of their photographs measuring each  $1\frac{1}{4}$  inches from top of head to point of chin, without head covering, full front view showing both ears, and also their certificates of landing, it being understood, however, that failure to produce a certificate shall not prevent an applicant from landing. Notices are to be posted in all post offices and other conspicuous places in Canada indicating where registration may be made.

**Atlantic  
steam  
trawling area  
extended.**

By an Order-in-Council issued on August 17 (1587) the existing regulations limiting fishing by steam trawlers in waters at least twelve miles distant from the shore in the Prince Edward Island area, were modified so as to allow trawlers to operate within that limit, but not within territorial waters, during the months of August, September and October, subject to the condition, however, that if the equipment of inshore fishermen is found to be destroyed in consequence of such fishing, steam trawling shall again be restricted as formerly. The object of the earlier regulation, which was promulgated in December 1916, was to safeguard the hand trawls of the inshore fishermen from interference or destruction by the steam trawlers. At the present time it has been found that sufficient quantities of fish to meet the requirements of the fresh fish markets are not obtainable from the inshore fishermen, while the haddock taken by the steam trawlers on the outside banks are not suitable either for the fresh fish trade or for smoking. Haddock of excellent quality are available in some of the inshore areas, and the owners of the trawlers claim that their operation would not interfere with the inshore fishermen during the period referred to, while the fresh fish trade cannot be developed as it should be except by means of steam trawling. The special fishery regulations of Nova Scotia and New Brunswick were also amended to allow shad fishing to be extended for two additional weeks ending August 31, owing to the unremunerative character of the past season.

**Methods of  
finding  
Employment.  
for Disabled  
Men.**

It will be remembered that the International Labour Office convened a meeting in March, 1922, of experts for the investigation of questions concerning disabled men. This meeting was devoted to the questions of

prosthesis and vocational retraining. A second meeting of experts in matters affecting the disabled opened at the International Labour Office, Geneva, on 31st July, 1923. The main question on the agenda was an enquiry into the problem of placing the disabled in employment. Recent statistics have shown that the total number of war-disabled is at least 10,000,000, including 8,000,000 who, in spite of their pensions, are forced to a varying extent to look for work. Of the 10,000,000 men disabled in the war, 1,500,000 are in France; 1,170,000 in Great Britain; 1,537,000 in Germany and 800,000 in Italy. The immense majority of disabled men are workers. In Germany, for example, more than eighty per cent of disabled men are paid workers coming under the legislation granting compulsory sickness insurance. Placed by their disablement in a position of inferiority on the labour market, they often find preference given to able-bodied workers. Owing to the difficulty of determining their degree of technical ability, serious difficulties often arise in fixing their wages. In periods of unemployment, moreover, disabled workers suffer more directly and seriously than others.

The object of the meeting of experts at Geneva was to examine the general problem of placing disabled men, after an exchange of information on the solutions effected or adopted in different countries, the difficulties met with and the results obtained. This comparative survey will enable the governments and the associations concerned to profit to the full from the experience of the various countries. The experts were selected either from among the heads of administrative services for the placing of disabled men in employment, or from among leaders of the big organizations of disabled men in various countries. Canada was represented at this meeting by Mr. R. B. Maxwell, First President of the Great War Veterans' Association of Canada.

The meeting favoured legal compulsion on the part of employers to employ disabled persons of both sexes. It was maintained that disabled labour should be distributed among all undertakings with the exception of those employing less than a certain minimum number of workpeople. Exemptions might be granted to individual employers or groups of employers in which the employment of disabled persons would be particularly difficult. Such exemptions should, however, be granted in consultation with the industrial associations concerned and those to whom exemptions were granted should be under an obligation to pay a tax, the revenue from which would be paid into a central fund to be used on behalf of disabled persons. There was some difference of opinion whether public employment exchanges should be charged with the duty of finding employment for the disabled or whether a separate organization should be maintained for this purpose. The prevailing view was in favour of entrusting the finding of employment for the disabled to the public employment exchanges, with the proviso that the exchanges should act in close collaboration with the offices for the disabled and the associations of the disabled. Disability pensions received by disabled persons, the experts unanimously maintained, should have no influence on wage rates. They also held that the wages of the disabled should be equal to the normal wages of able-bodied workmen. The resolutions adopted at this meeting are published in the weekly leaflet of the International Labour Office for August 10, 1923, entitled "Industrial and Labour Information".

#### "The Control of Wages."

Some account of the Workers' Education Bureau and its relationship to the American Federation of Labour was given in the February issue of the LABOUR GAZETTE (page 127). Among its numerous other activities the Bureau is now publishing, under the general title "The Workers' Bookshelf",

a series of books restating from the labour point of view some of the fundamental problems of modern industrial society. The first publication in this series, "Joining in Public Discussion", was a study of effective speechmaking for members of labour unions, conferences and groups organized for public discussion. A second volume, "The Control of Wages" has recently appeared under the joint authorship of Professor Walter Hamilton, of Amherst College, and Stacy May, instructor in the Workers' College at Amherst. The book is written in a clear and incisive style and is a contribution to the problem which should prove of service equally to the worker and the general reader. The writers protest against the mystery and secrecy which surround business enterprise. They maintain that a system of centralized wage control such as existed in war time but was afterward allowed to lapse, might be maintained as a part of the normal social organism. This can only be achieved, however, it is pointed out, if labour adopts long views as to its ultimate interests, and concerns itself not only with immediate wage rates and conditions, but with the wide problems involved in the discovery, conservation and utilization of human resources. The aim of labour as of the other elements of society, the writers maintain, should be to build up a democratic culture in which the "good life" would no longer be reserved for the few.

#### Joint Industrial Councils in Great Britain.

The British Ministry of Labour has recently issued a report on the establishment and purposes of Joint Industrial Councils in Great Britain which were set up in accordance with the recommendations of the "Whitley" Committee. The report covers the period from October, 1916, when the Committee was appointed to the end of 1922. In this period the report states that 73 joint industrial councils had been established. Of these, 15 are not at present

functioning. Certain important industries, however, such as coal mining, cotton manufacture, engineering, shipbuilding and iron and steel manufacture, which had well-established machinery for the discussion of matters between employers' and workers' organizations had not established joint industrial councils on the lines of the Whitley plan. It was estimated that at the end of 1922 there were about 3,750,000 workpeople in the industries covered by actively functioning Joint Industrial Councils and interim industrial re-construction Committees. Including industries having other voluntary joint conciliation machinery it was computed that about 8,500,000 workpeople were in such industries. Besides the joint industrial councils not less than 150 district councils had been established, and the report states it is probable that considerably over 1,000 works committee have been formed, although it is impossible to estimate the total number existing, as the Ministry of Labour had no direct relations with the Works Committees.

**Standardized  
production  
and  
standardized  
wages.**

The recent establishment of standards of production in connection with the garment and clothing industries at Cleveland and else-

where in the United States was described in the LABOUR GAZETTE for May, 1920, (page 553) and September 1920 (page 1208). A similar plan of "payment by results" which has been successfully followed in a machinery factory at Hull, England, was outlined in the issue for August in the same year (page 1021). The principle of these various plans is that a standard of output is established, being a fixed quantity of finished product, which a certain number of men are capable of turning out at ordinary day rates. The standardized production plan is carried one stage further in connection with some of the copper mines in the south west of the United States by the introduction of instructions to show the rank

and file of the workers how they may surpass the standard day's production and so add to their earnings. The system is described by Mr. George L. Walker in an article appearing in the *Engineering and Mining Journal-Press* (New York), for August 11. The writer states that "in the mines which have adopted it the workmen are strongly in favour of the new arrangement, and it has increased wages sufficiently so that it is attracting many union miners. In the mine office a careful analysis is made of the daily records of the amount of work done in every department of the operations, the end in view being to determine just what constitutes a day's work. What ordinarily has been accomplished is arrived at by computing on a per man-per shift basis. With special allowances made for hot places and wet places in the mine, a standard for a day's work is established. The next step is for the management to take the miners into its confidence as to the plan. Every part of the work possible is then let out to the miners on contract, but with the provision that the men in each group are to continue to be paid wages, at the regular daily rate, whether or not they accomplish more than they had been accomplishing. It is thus a case of their getting their regular wages anyway, with a chance to earn more. At first only a few of the men speed up sufficiently to earn any of the extra compensation which is paid for accomplishing more than the amount specified as a standard day's work. Some of them fall far short of the standard. At this point it costs the company more to get the work done than it did before. Right here the management puts the educational factor of its plan in operation. It selects and gets together a number of expert miners, shovellers, timbermen, and the like—practical workmen who have demonstrated their ability to work faster and better than 95 per cent of the other workers commonly employed can. Men of this highly efficient type are

engaged at better wages to teach others how to get increased results... Perhaps the best thing about the plan is that it stimulates the workers to learn to get results. A lot of miners who have used their heads and learned where a hole should be drilled, at what angle and to what depth to exert the greatest efficiency in breaking rock; others who discovered and developed the most effective way to set timbers; and even those who introduced brain work into shovelling dirt, are getting as good pay now as experts. From these positions they are being moved ahead to fill others of greater responsibility.... It should be possible to adapt this plan to a great many departments of industrial production and distribution. In view of the remarkable results it is showing, it seems well worth trying."

#### Wages and conditions in British building trades.

Wages and conditions of labour in the Building Trades in Great Britain are fixed by the National Wages and Conditions Council for the

Building Industry which is composed of representatives of the National Allied Building Trades Employers and the National Federation of Building Trade Operatives. Last spring the employers proposed a reduction in wages and an increase in working hours. There also arose a difference as to the interpretation of the agreement. It was agreed to submit these matters to an arbitrator to be named by the Lord Chief Justice with two assessors, one appointed by the operatives and the other by the building employers. On May 15, Sir Hugh Frazer, the arbitrator, issued his award which was signed also by the two assessors. The agreement provides for the automatic adjustment of wages in accordance with the cost of living index numbers of the Ministry of Labour allowing a variation of  $\frac{1}{2}$  d. per hour for every complete average variation of  $6\frac{1}{2}$  points in the index number. One clause in the agreement allowed a variation in the status of workers. The arbitrator

declared that this clause should be deleted and that they should adhere strictly to the sliding scale in wage adjustments. The award decreed that the wages of craftsmen should be reduced by  $\frac{1}{2}$  d. per hour, 1 d. per hour in grade A and B towns, and  $\frac{1}{2}$  d. per hour in grade C towns, and that the wages of labourers should as nearly as possible be 75 per cent of the craftsmen's wages. The grading of the towns was in accordance with a scheme adopted by the National Wages and Conditions Council.

The Council has since adopted National working rules in respect of extra wages, overtime, night gangs, and walking, travelling and lodging allowances to supersede local agreements. The question of hours of labour has been referred to an arbitrator, the Area Joint Councils and the National Council having failed to reach a settlement.

#### Unemployment Grants in Great Britain.

The Unemployment Grants Committee which was appointed by the British Chancellor of the Exchequer in December, 1920, for the purpose of allocating funds to local authorities to assist them in carrying out approved schemes for the relief of unemployment has issued its second interim report covering its operations up to June 28, 1923. The Committee has dealt with 9,444 schemes submitted by many hundreds of local authorities. Of these 2,592, of an estimated value over £12,000,000, have been approved for direct grants, which on the basis of 60 per cent of the wages cost, amounted to £3,320,000, and 3,601 schemes, involving a total expenditure of £28,637,696, to be defrayed from loans, have been approved for grants in respect of interest and sinking fund charges. Commitments and provisional approvals affect schemes of a further value of £475,000. The total volume of direct employment provided as a result of these various schemes is estimated at approximately 1,500,000 man-months. At the date of the report the Committee

had a balance of nearly £200,000 on hand for schemes on the basis of 60 per cent of the wages cost, and it had under consideration schemes on the loan basis costing about £699,000, which was approximately the amount up to which the Committee had authority to approve further works. As there had been a falling off in the number of revenue-producing schemes proposed, the committee had decided to offer better terms as an inducement. These terms provide for the payment of 50 per cent of the interest during fifteen years, or the full period of the loan, whichever is the less, on loans raised for not less than ten years. Similar terms are also to be offered to public companies carrying on the same class of work, subject to certain conditions respecting dividends.

**Factory accidents in Great Britain.** The Chief Inspector of Factories and Workshops of Great Britain has issued his annual report, covering the work of 1922. During the year there were 97,986 accidents in the factories and workshops of Great Britain, and of these 843 were fatal. These figures show an increase of 5,421 over those of 1921. The total number of machinery and other "one day" accidents was 29,533, and of non-machinery accidents 68,453. The Chief Inspector states that the increase is not attributable to any falling off in the standard of safety provided but is rather the result of a change in trade conditions. This change is accounted for by the fact that the 1921 returns were greatly affected by the prolonged miners' strike; and secondly by the improvement in trade during the last months of the year, bringing with it an increase in the number of persons employed and the number of hours worked and resulting in a steeper rise in the accident curve during those months. The report supports the view that a gradual revival is taking place in some of the more important industries. In South Wales, the Chief Inspector notes, 80 per cent of the mills

were at work in the tinplate trade at the end of 1922, as compared with 68 per cent at the end of 1921, and this improvement has reacted on the local steel works. There has similarly, been improvement in the iron and steel trade elsewhere. In some cases employers have been utilizing the period of slackness in trade to modernize their plant, so as to be prepared to take full advantage of a revival. This is particularly evident in the iron and steel industry, where very large capital expenditure in plant improvement and renewal has recently been incurred.

#### **Australian Arbitration Courts.**

A conference between the six Australian States and the federal government was held at Melbourne in May, when the problem of the overlapping of federal and state arbitration court awards was considered among other questions. As a result of the conference the Commonwealth Government agreed to introduce legislation to provide for an amendment of the constitution, providing for the establishment of a tribunal representing the Commonwealth and States, for the revision at least every five years of the list of industries to be classified as federal, and with regard to these industries extending the commonwealth legislative power to industrial conditions generally; the tribunal will have power to review decisions of state industrial authorities.

#### **Apprenticeship in bricklaying in New South Wales.**

The New South Wales Board of Trade following a public inquiry into conditions in the building industry, recently published the following rules to govern the conditions of apprenticeship in bricklaying. Minors entering the trade between the ages of 14 and 16 years are to be apprenticed for 5 years; those entering between the ages of 16 and 17 years for 4 years; and those between 17 and 19 years for 3 years; provided that an apprentice entering after the

age of 17 shall, if the State Board of Trade so direct, attend or receive instruction from a continuation or trade school, or any other approved school, for not less than 5 hours per week over a period not less than one year, and also providing that an apprentice entering the trade after his nineteenth birthday may complete his apprenticeship in two years if he shall have passed satisfactorily through a 12 weeks' course at the bricklaying training school conducted by the Master Builders' Association, or some other training school approved by the Board of Trade. A probation period of three months is allowed for intending apprentices. In addition to individual employers or journeymen the Master Builders' Association or the Operative Bricklayers' Society may by their officials be the masters of apprentices in the trade. Apprentices who have attended a two year course in bricklaying or building construction at the Technical College are entitled to extra pay. Unless otherwise ordered no limit is placed on the proportion of apprentices to journeymen, but application may be made from time to time to fix the proportion of any employer in respect to whom it is alleged that there is undue employment of junior labour. The Board may sanction the entry of adults on special contracts of apprenticeship.

#### Accident Prevention Methods in Ohio.

The Department of Labour has received the first annual report of the "Department of Industrial Relations" of

the State of Ohio. The duties of the new department are to render awards under the provisions of the workmen's compensation law and to determine and adopt standards and devices as a means of protection, to reduce or eliminate the hazards incident to industry. In addition to the incentive provided by the merit-rating of individual employers, an accident prevention laboratory has been established to assist in the prevention of accidents. In cases of accident

the statistical branch of the actuarial section submits to the factory inspection division statistical data relative to the causes of accidents in order that special inspections may be made of the factories or workshops where such accidents have occurred. This cooperation between actuarial and inspection officers is expected to result in a material reduction in accidents. "The contact between safety men and employers, factory managers, foremen and employees should be of great aid to all in accident prevention work", the report states. The department is organizing a factory safety movement, designed to assist in those factories where safety engineers are not employed.

#### French plan to promote higher studies.

A committee of manufacturers and commercial men has been formed at Paris for the purpose

of enabling students of limited means to find employment while attending college. Such employment must be restricted to a limited number of hours each day, but sufficiently remunerative to meet the expenses which are involved by higher studies and residence in a university town. The committee is not associated with any religious denomination or government department. Its chairman is Mr. Maurice Barrès; the vice-chairmen are Mr. Clementel, president of the International Chamber of Commerce; Mr. Camille Julian, professor in the Collège de France; Mr. Charles Laurent, hon. president of the Metallurgical and Mining Industries, and Mr. LeChatelier, of the Academy of Sciences.

#### Credit Institution for Italian Labour Abroad.

The Italian Council of Ministers, on the report of Premier Mussolini, has approved the establishment of a national

credit institution for Italian labour abroad. The object of this measure is to increase the opportunities of employment for Italian labour abroad by financing undertakings employing Ital-

ian workers outside the kingdom. The program of the new organization will include the granting of subsidies to such undertakings on condition that the number of Italian workers employed by them represents at least half of their staff; the granting for Italian undertakings and collective or co-operative societies, and, in exceptional cases, to individual workers, of advances for the provision of securities or the purchases of raw materials and tools necessary for land settlement and other operations; the collection of documents relating to projected undertakings or schemes of land settlement abroad; the encouragement of study and research in this domain; and, finally, the development of saving among Italians settled abroad. The Institute in question will be established for 30 years and constituted as a limited liability company with a share capital, in conformity with a Royal Decree which will be issued subsequently. Its capital will be 100,000,000 lire fully paid up, and interest on its shares up to 4½ per cent will be guaranteed, recourse being had, if necessary, to the emigration fund, and will be exempt from taxation. It will also be entitled to issue debentures and raise loans for the purpose of carrying out its objects. Besides its central office at Rome, it will be entitled to establish agencies and sub-agencies in the country and abroad. The Italian Prime Minister has instructed the Commissioner-General of Emigration to take the necessary steps for the constitution of the new organization.

**Family  
allowances  
in the  
Netherlands  
and France.**

The principle of making special allowances to employees in accordance with the size of their families has been under discussion in the Netherlands for some years past. These allowances were favoured by the Roman Catholic and Protestant Christian Trade Unions but were opposed by the Netherlands Federation of Trade Unions and the Netherlands General Trade Unions Federation. The chief objections were

that these allowances force down the present level of wages, that they exert a prejudicial influence on the good understanding between workers, and that they aim at breaking up the unity of the organized workers and maintaining the existing unsatisfactory level of wages. At a joint congress of these two federations, at which about 300,000 members were represented, a counter proposal was made that the general level of wages should be so fixed as to enable workers with large families to maintain a suitable standard of living. It was also opposed by women on the ground that it promoted the dependence of wives as the allowances were commonly paid to the husbands. Other opponents feared that the payment of children's allowances would undermine the sense of responsibility of heads of families.

The principle of children's allowances was first applied in the Netherlands to the post office staff in 1912. It was afterwards extended to the teachers, and in 1920 to all civil servants. The allowances for the latter amounts to 2½ per cent of the salary for each child under eighteen years of age with a minimum of 50 guilders and a maximum of 200 per child per annum. Children's allowances have also been granted to railway employees on similar terms except that the allowances only begin with the third child. The majority of the provinces and municipalities have also introduced children's allowances for their officials and employees. Provisions for children's allowances have also been inserted in 49 collective agreements affecting about 2,500 establishments and 61,700 workers. In certain undertakings, by collective agreements or separate arrangements, funds have been set up to which the employers contribute in proportion to their total wages bill, generally one per cent of that amount. Out of this fund an allowance is paid to workers, usually amounting to one guilder per week for the third and every further child under fourteen years of age..

Last May the Minister of Labour of the Netherlands stated that a Bill for the establishment of a children's allowance fund had been prepared but that he proposed waiting for an improvement in the industrial situation before introducing it.

In France an Act was passed in December, 1922, providing that contracts for public works for the State, departments or communes might contain a clause requiring contractors to pay family allowances to their employees on the works in question. In accordance with this Act, three decrees were issued on July 13th, the first of which makes the payment of family allowances to workers compulsory, either through a compensation fund approved by the Minister, or, where there are at least 2,000 workers, the contractor may introduce a scheme for his own work people which conforms with conditions laid down for the approved organizations.

Thus the decrees merely authorize the inclusion of clauses providing for family allowances in contracts entered into with departments, communes or public benevolent institutions.

**Italian State Monopolies returned to Private Control.**

The Fascisti Government of Italy has arranged for the transfer to private industry of life insurance, telephones and certain railways, services which had hitherto been administered by the State. Life insurance had since 1912 been reserved to the National Insurance Institute, but existing private companies were permitted to continue for ten years, subject to certain conditions. The present Government, acting on the principle of economic freedom, has now decided to abolish the state monopoly, and henceforth the business of life insurance subject to certain guarantees will be open

both to Italian and foreign companies. The National Insurance Institute, however, will be maintained, its policies being guaranteed as formerly by the State. A decree issued earlier in the present year authorized the Government to cede to private undertakings the right to operate and construct telephone lines, and to lease the workshops and other premises necessary for the working of the telephone services, all concessions to be for a minimum term of 25 years. In regard to the railways, the companies undertake full responsibility for the period of the concession. The railway staffs cease to be state servants, but companies must employ at least nine-tenths of the staffs previously employed by the State. The companies are left free in regard to wages, except that the wage scales shall be valid for at least five years, that the technical staff is guaranteed continued employment and that staff regulations be subject to government approval.

**Trade Union Bank in Germany.**

The General Federation of Trade Unions in Germany has established a labour bank in the form of a company with limited liability in which the shareholders will be the unions affiliated with the Federation, and with the salaried employees' organization. The new bank will centralize trade union funds, which are now distributed among various banks and invest this money for the benefit of the unions. It has been decided to begin with a small establishment until the necessary experience has been gained, but it is hoped that ultimately the bank will have the management of the financial business of the central and local trade union organizations. Later the new concern will be converted into a joint stock company, the shares remaining in the hands of the trade unions.

The new Bulgarian government and compulsory labour.

The new Bulgarian Government has no intention of abolishing compulsory labour. According to information received by the International Labour Office, Mr. Stoencheff, the new Minister of Public Works, states, however, that certain modifications will be made. The compulsory service of young persons will be maintained, but in future the contingents called up will be smaller, and will be divided into larger groups. The compulsory labour of women will be abolished in view of the fact that the results obtained do not justify its maintenance and because, in the present social organization of Bulgaria, women's work is more useful, and, indeed, indispensable, at home. The question of the temporary compulsory service of citizens up to 45 years of age will be left to the discretion of the municipal councils, who will be competent to organize and utilize it in accordance with local requirements.

Wages in Russia

Interesting information with regard to wages in Russia and the attitude of the Soviet Government in the regulation of wages is contained in the *Industrial and Labour Information*, the weekly publication of the International Labour Office.

The wages of manual and non-manual workers are at present fixed by two different methods. Under the first method the State fixes a compulsory minimum wage for all undertakings and institutions; under the second, wages are fixed by mutual consent of the parties interested by means of collective agreements.

The State fixes by decree compulsory minimum wages for all undertakings and institutions, that is to say, State undertakings and institutions, public undertakings and institutions, and private undertakings.

In private undertakings these minimum rates may be increased by clauses

in collective agreements or in individual labour agreements.

State undertakings may only modify the scales by collective agreement. In State undertakings, in the absence of collective agreements, the scales of wages fixed by the State are considered as maximum wages, and may only be exceeded in special cases where particular conditions require it.

The compulsory provisioning of manual and non-manual workers by the State having been abolished since October, 1922, wages may only be paid in money.

The minimum wages are fixed by a special State authority, the Chamber of Wages attached to the Commissariat of Labour. It is the duty of the State to furnish them with the necessary credits in accordance with the budget estimates.

All other industrial undertakings obtain the sums necessary for the payment of wages from the working capital in their possession.

Statistics show, moreover, that wages more rapidly approach their pre-war level in the industries in constant contact with the free market and depending less on the State, such as the food industry and printing, in contrast to the metal industry, for example. These industries are able to dispose of their products and consequently possess more working capital.

Conventions of the following international labour organizations having affiliations in Canada will be held during the month of October:

American Federation of Labour, at Portland, Oregon, on October 1 to 13.

Commercial Telegraphers' Union of America, at Montreal, Que., on October 1 to 7.

Journeyman Stone Cutters' Association of North America, at Cleveland, Ohio, on October 8 to 22.

The Canadian Conference on Child Welfare and the Canadian Association of Child Protection officers met in Winnipeg from September 11 to 14. The programme included such matters as child health, the child in employment, education and recreation, the child in need of special care, and the spiritual and ethical development of the child. An account of the convention will be given in a future issue of the LABOUR GAZETTE.

It is announced that a convention will be held next month at Fredericton, N.B., to discuss certain difficulties which have arisen in the Province in connection with the assessment of the lumbering industry under the Workmen's Compensation Act. This industrial group has a deficit of \$170,000, which the Board is seeking to extinguish by a special assessment covering three years. It is claimed that portable mills have been largely responsible for the increasing rate in this class, and the Provincial Lumbermen's Association is seeking official recognition in order that it may have the necessary authority to investigate safety appliances and working conditions in all plants coming under their classification.

A bill to provide for the registration of barbers and otherwise to regulate the practice of barbering will be introduced at the session of the Legislature of British Columbia which will open next month.

The Hon. Mrs. M. E. Smith, a member of the British Columbia Cabinet, has recently been visiting Great Britain, for the purpose of promoting uniformity in social legislation throughout the British Empire, with special reference to minimum wages for women and mothers' pensions.

The prize banner awarded by the Ontario Pulp and Paper Manufacturers' Safety Association for the best accident prevention record was won in class A by the Provincial Mills at Port Arthur.

Victoria, B.C., was reported in the LABOUR GAZETTE for June (page 574) to have taken advantage of the Provincial Superannuation Act of 1921, to provide superannuation benefits for city hall workers, policemen and firemen, the city council contributing \$8,000 as the city's share in the arrangement. This plan, it is now stated, has since been allowed to fall into abeyance, aldermen who were at first favourable being now opposed to it because the city's outside workers, school employees, and others, sought to share its benefits, with the result that the expenditure required of the city would be nearly \$40,000 instead of the \$8,000 which were included in the estimates for the last six months of the present year.

The International Printing Pressmen and Assistants' Union of North America has made arrangements for erecting a chapel dedicated to the memory of the veterans of the Great War who were members of the union. The memorial chapel will be erected, at a cost of \$50,000, on the property of the union at Pressmen's Home, Tennessee, the headquarters of the organization, where are already established a sanatorium for tuberculosis, a home for incapacitated members and a technical trade school. The amount required for the memorial chapel is being collected from members and friends throughout the United States and Canada.

The Parliament of the Australian Commonwealth recently approved a proposal to establish an Institute for Research in Science and Industry with a view to the development of the natural resources of the country. The State premiers will be asked to collaborate in the work of the Institute.

An inquiry into the methods of apprentice training which prevail in various parts of the British Empire is being made by the Chief Inspector of Factories of Tasmania with a view to improving the existing system in the State. The inquiry relates to the se-

lection, probationary period, training and employment of apprentices.

The Wisconsin Legislature is considering a bill to provide for the organization of the employers of the State into a Mutual Employment Insurance Company. Each employer, under the scheme would pay a small premium periodically into a state fund, its amount depending upon the frequency of his seasonal or periodical unemployment.

The United States Bureau of Mines recently conducted a series of tests of coal dust explosions under actual mining conditions, which were described in a recent issue of the United States *Monthly Labour Review*. Coal dust, it is stated, is unavoidably formed in mines during drilling, machine cutting, blasting, and hand picking. Among avoidable causes are overloading cars and using coal for ballasting in the entries where it soon becomes pulverized. Pure anthracite will not explode, but dry sub-bituminous is highly explosive when ignited in air. Two safety measures are used, one being wetting, which, however, must include dust on timbers as well as on the floor. Some of the most disastrous explosions, it is stated, have taken place in mines equipped with sprinklers, force tank cars and other

apparatus. Another method of prevention is the use of rock dust. British investigations have proved that pulverized shale is not hurtful to the miners' lungs. Shale dust must be used in an amount at least equal to the coal dust and if possible on top of it.

An article in the *Journal of the Royal Society of Arts* for February 1923, attributes a considerable proportion of lead poisoning among painters to the use of dry sandpaper. Figures are given showing the amount of lead dust and its distribution when walls are sandpapered. The dust may be inhaled not only during the actual process, but later from clothing. The dust from this process contains particles of silicon, which is one cause of the high rate of respiratory disease among painters. It is claimed that all the dangers from this process may be obviated by moistening the surface of the wall and using a waterproof sandpaper. In connection with this subject it will be recalled that one of the most important of the Draft Conventions adopted at the Third Conference of the International Labour Organization (League of Nations) in 1921, proposed to prohibit after November 1927, the use of white lead and sulphate of lead in the internal painting of buildings.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation, Strikes, Prices.

#### The Labour Situation

**E**MPLOYMENT at the beginning of August, as indicated by the employers of labour, showed a further upward movement, although the expansion was not very pronounced. At the beginning of August the percentage of unemployment among the members of trade unions was 2.9, as compared with 3.4 at the beginning of July, and with 4.1 per cent at the beginning of August, 1922.

The Employment Service of Canada report an increase in the volume of

daily business transacted during July by the offices in the various provinces, as compared with the previous month and as compared with the corresponding month of last year.

The following is a brief survey of employment at the end of August, 1923, as reported by the superintendents of the offices of the Employment Service of Canada.

In the Maritime Provinces the construction group continued fairly active

with many additions to staffs on sewer, water works, street paving, and provincial highway operations. There was a large demand for railway labourers, section hands and bridge builders. Calls for general farm labourers were numerous with sufficient applicants to meet the demand. No decrease was reported in the requests for domestic help, but all positions for casual workers were filled without difficulty.

There was a fair demand for farm help in Quebec, with a slight decline from the number of vacancies offered during last month. Little change was reported in the building industry, a considerable number of vacancies for plasterers, plumbers, building labourers and road workers being offered. Orders for bushmen were received in increasing numbers at the Quebec and Hull offices, while longshore work at Montreal was active.

The demand for harvest help in Ontario was brisk, with a few calls for general farm labourers and fruit pickers for the Niagara Peninsula. In some sections harvesting was nearing completion, with a consequent falling-off in the demand. Numerous orders for bushmen were received, with the lumber camps ready to absorb all the men available. Progress was reported in the building and construction groups, many tradesmen and labourers for the construction and maintenance of roads, highways and railway lines, being placed. Calls for factory hands and skilled mechanics were reported in increasing numbers.

A keen demand for harvest help and thresher hands was reported from the offices in Manitoba, with a fair supply of workers available. There was a further increase in the vacancies offered and placements made in railway construction and maintenance work, while activities in the building group were much improved. Skilled building tradesmen were in demand for urban and rural districts, while posthole diggers, groundsmen, and transmission line

labourers, were placed from Winnipeg. Mill labourers and bushmen were required in large numbers from all points.

Harvesting and threshing continued to absorb numbers of workers in Saskatchewan, although inexperienced applicants were very difficult to place. There was a fair demand for building mechanics and skilled labourers, while road work, paving, and railway maintenance and construction, provided employment for many.

A shortage of experienced men to meet the active demands for harvesters and thresher hands was evidenced at most of the Alberta offices. There were several requests for building labourers and mechanics, and placements were effected without difficulty. The number of vacancies available for railway construction was greatly in excess of the supply, due to the number of labourers now helping with the harvest. In the mining group a few coal miners were required at Lethbridge and Drumheller.

In British Columbia general farm labourers were required throughout the province, although no large demand was felt. Vernon, Kamloops, and Penticton offices, reported a slight scarcity of pickers and packers for the fruit harvest. Road construction and municipal repairs continued to provide employment for a few, while logging showed signs of improvement, with only a small number of positions offering.

#### EMPLOYERS' REPORTS.

There was a further small increase in the volume of employment as reported by employers of labour to the Dominion Bureau of Statistics at the beginning of August. The expansion was recorded largely in the construction, transportation, communication and service groups, and was principally of a seasonal character. Quebec, the Prairie Provinces and British Columbia registered improvement, but in the Maritime Provinces and Ontario the

tendency was downward. Four of the six cities for which special tabulations are made reported increased activity, these being Montreal, Hamilton, Winnipeg and Vancouver, while in the remaining two, Toronto and Ottawa, contractions were indicated. The improvement in Montreal was registered largely in railway car and other iron and steel works and in construction; on the other hand, rubber factories, shipping and stevedoring and retail trade were slacker. In Toronto, textile and other manufacturing plants were less fully engaged and curtailment in personnel was shown in retail trade. The declines in these industries were partly offset by increases in building construction and on electric railways. In Ottawa the changes were slight, the losses in retail trade being most extensive. The resumption of activity in textile works in Hamilton, together with increased employment in building, accounted for the revival in that city. In Winnipeg, small addition to staffs were reported in a number of industries, more particularly in construction. Shipping and stevedoring, saw mills and trade absorbed the majority of the extra workers in Vancouver. An analysis of the returns by industrial groups shows that manufacturing as a whole was less active than at the beginning of July, in spite of continued seasonal gains in saw mills, in electric current plants and in fruit and vegetable canneries. Large losses in staff were indicated in rubber works and declines on a smaller scale occurred in leather, textile, iron and steel factories and in fish canning. Further curtailment of operations was indicated in logging camps; coal mining and trade afforded less employment, but continued seasonal improvement was reported in construction, transportation, communication, in the mining of metallic ores and in hotels and restaurants. The level of employment in almost every industry was higher than during the same period of 1922 and 1921.

An article elsewhere in this issue gives in some detail the employment situation at the beginning of August.

#### TRADE UNION REPORTS.

Statements tabulated from 1,481 labour organizations with a combined membership of 154,522 persons showed that 2.9 per cent of the members were unemployed at the end of July, as compared with 3.4 per cent at the close of June and with 4.1 per cent on July 31, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting). In Quebec, Manitoba and British Columbia employment was on a higher level than in June but in Nova Scotia, Ontario and Alberta the situation was slightly less favourable. No change in employment was reported in New Brunswick and Saskatchewan. More work than in July of last year was afforded in all provinces except Nova Scotia and Alberta. Unemployment in the manufacturing industries as reported by 415 organizations with a total membership of 48,947 persons was in slightly lesser volume than in June, 4.3 per cent of the members being out of work as compared with 5.4 per cent in the previous month and with 6.2 per cent at the end of July, 1922. Printing tradesmen, cigar and tobacco and leather workers were more fully engaged than in June. Greater activity was also shown in the iron and steel group due to increased employment for blacksmiths, machinists, carmen and sheet metal workers. Boilermakers, moulders and pattern makers, however, were not quite so busy. Furniture, garment and glass workers and metal polishers also reported larger percentages of unemployment. Less activity was shown among Nova Scotia coal miners, but in the British Columbia coal fields no un-

employment was registered. Quarry workers in Nova Scotia and asbestos miners in Quebec also reported no idle members. The percentage of unemployment among miners was somewhat larger than that reported at the close of July, 1922. The 182 unions of building and construction workers with a membership of 15,628 persons reported 4 per cent of their members out of work as compared with 3.1 per cent in June. Bridge and structural iron workers and tile layers, lathers and roofers were not so busy as in the previous month and employment was also in lesser volume for bricklayers, masons and plasterers, carpenters and joiners, granite and stonecutters and painters, decorators and paperhangers. Plumbers and steamfitters reported considerable improvement and steam shovel and dredge-men, electrical workers and hod carriers and building labourers reported no unemployment. The percentage of idleness in the building group, as a whole, remained the same as at the end of July, 1922. Transportation workers were slightly better employed during July of this year than in either the previous month or the corresponding month of last year. Reports were tabulated from 562 unions of transportation workers, with a membership of 55,128 persons, 839 of whom were out of work, a percentage of 1.5. Workers in the shipping and stevedoring division and steam and electric railway workers all registered improvement, though the change was very slight in both the shipping and steam railway divisions. In the steam railway division conductors, engineers, firemen and trainmen were more active. Express employees registered no unemployment and maintenance of way employees reported the same percentage out of work as in June. Employment for retail clerks was in slightly greater volume than at the close of June. Fishermen reported no idle members. Hotel and restaurant, theatre and stage employees, barbers and stationary engineers and firemen were more fully employed.

**EMPLOYMENT OFFICE REPORTS.** During the month of July, 1923, the Employment Service of Canada made 36,575 references to positions and effected a total of 35,099 placements. The placements in regular employment numbered 24,842 of men and 3,231 of women — a total of 28,073 — while the placements in casual work were 7,026. Registrations for work totalled 43,859, of which 34,112 were from men and 9,747 from women. Positions available at the offices numbered 42,244, of which 33,242 were for men and 9,002 for women. The reports indicate an expansion in the volume of business transacted as compared with the preceding month and with the corresponding period a year ago. A report in detail for this month may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED.** According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during July declined to \$12,544,137 from \$14,345,573 in the previous month, and from \$15,447,545 in July, 1922.

According to the *MacLean Building Review*, issued by the MacLean Building Reports, Limited, the value of the contracts awarded in Canada during August amounted to \$27,488,700, compared with \$30,842,500 in July, and with \$25,187,500 in August, 1922. Business building during the first eight months of 1923 shows an increase of 17 per cent as compared with last year, and the industrial group reflects the steadily improving economic situation, with an increase of 66 per cent. Public works and utilities also recorded a gain, amounting to 55 per cent over last year's total up to the end of August. Of the total value of the contracts awarded in Canada during August, \$611,900 was to be spent in the Maritime provinces, \$6,958,500 in Quebec, \$13,809,300 in Ontario, and \$6,109,000 in the western provinces.

# PRODUCTION REPORTS.

The Dominion Bureau of Statistics reports a decline of 17.7 per cent in the production of pig iron during July as compared with the previous month, the gross tonnage being 81,647 tons for July and 99,239 tons for June. The decline was largely due to one of the largest producing firms having their furnaces banked during a period of labour difficulties; otherwise this month might have shown the greatest July production since 1917. The Bureau records for the month of July show that the output this year was only exceeded in July 1917 and July 1920, when the production was about 83,000 and 84,000 tons respectively. The cumulative production of 516,793 tons for the seven months ending July, 1923, showed an increase of 231 per cent over the corresponding period in 1922 and 142 per cent over 1921, when 223,892 tons and 363,292 tons respectively, were produced. The output of basic, foundry and malleable iron was similarly greater than in 1922 and 1921. Ferro-alloys, consisting entirely of ferro-silicon of the various grades rose to 2,342 tons, a slight increase over June when 2,185 tons was produced. Nine furnaces were in blast at the end of July, two additional furnaces having been blown in before the close of the month. The active furnaces were: two at Sydney, N.S.; two at Hamilton, Ont.; one at Port Colborne, Ont.; and four at Sault Ste. Marie, Ont.

The production of 73,532 tons of steel ingots and castings during July showed a decline of 22,635 tons from the level of June, when 96,167 tons was produced. The production of 69,722 tons of basic open hearth steel ingots for the use of the reporting firms, although lower than the record for June, showed an increase over the July output of 61,243 tons in 1922, and 52,111 tons in 1921. The production of steel castings was also lower, practically the whole of the decline being in the output of acid open hearth castings; the production of this grade dropped to 163 tons

in July from 542 tons in June. The cumulative production of 549,962 tons of steel ingots and castings during the seven months ending July 31, exceeded the outputs for the corresponding periods in the two preceding years when the totals were 349,118 tons in 1921 and 239,847 tons in 1922, and compared favourably with 1920 when about 641,000 tons was produced. The average monthly production for 1923 was about 79,000 tons and exceeded the average for 1922 by 132 per cent and 1921 by 58 per cent.

A report from the Department's correspondent at Cobalt states that 29 cars of silver ore were shipped during the month from the Cobalt camp, containing approximately 2,200,792 pounds of ore as compared with nine cars of silver ore containing 689,880 pounds of ore in the previous month. The Nipissing Mine shipped 221 bars containing 252,561.49 ounces of silver, and the Mining Corporation of Canada shipped 272 bars containing 274,307.44 ounces of silver, making a total of 493 bars containing 526,868.93 ounces of silver for the month. During the previous month there was shipped 239 bars containing 259,795.48 ounces.

A report from the British Columbia Forestry Branch shows that 206,324,194 feet board measure of timber was scaled in the province during July. The total includes Douglas fir, 85,603,982 feet; red cedar, 56,392,733 feet; spruce, 16,222,321 feet; hemlock, 30,099,040 feet; balsam, 8,767,308 feet; yellow pine, 4,724,975 feet; white pine, 2,063,319 feet; jack pine, 1,618,980 feet; larch, 423,546 feet; cotton wood, 392,167 feet; and other species, 13,823 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued amounted to \$20,976,770 in July as compared with \$20,968,000 in June. The gross earnings for the first seven months of 1923 amounted to \$137,786,897, as

compared with \$121,909,356 for the same period in 1922.

The gross earnings of the Canadian Pacific Railway for July were given in a preliminary statement as \$15,677,836 in comparison with \$14,463,835 in the previous month; and for the seven months ending July 31, 1923, as \$96,523,329 as compared with \$90,759,193 for the same period in 1922.

### Strikes

The time loss due to industrial disputes reported to the Department during August was less than during either July, 1923, or August, 1922. There were in existence at some time or other during the month 17 disputes, involving 3,035 employees and a time loss of 36,017 working days, as compared with 21 strikes in July, involving 17,104 employees and a time loss of 310,608 working days. In August, 1922, there were recorded 25 disputes involving 25,364 employees with an estimated time loss of 450,692 working days. At the beginning of August there were on record 16 disputes involving 2,907 employees. One new dispute commenced during August, involving 128 employees with a time loss of 1,728 working days. This strike and one of the strikes commencing prior to August terminated during the month. At the end of the month, therefore, there were 15 disputes involving 1,207 employees.

### Prices

Retail prices of foods averaged slightly higher owing to a seasonal advance in potatoes. The cost of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.53 at the beginning of August as compared with \$10.17 for July; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.92 for June, 1920 (the peak); and \$7.68 for August, 1914. Potatoes showed the only important change accounting for 34c of the advance. Small increases occurred in eggs, dairy butter,

cheese, sirloin steak, beans, coffee, and tea, but these were offset by declines in sugar, milk, lard, salt pork, veal, and mutton. Including the cost of fuel and rent with that of foods the budget averaged \$21.03 at the beginning of August as compared with \$20.65 for July; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.92 for July, 1920 (the peak); and \$14.41 for August, 1914. Fuel showed little change from the July level but was somewhat under the peak of February, 1923. It was, however, slightly higher than a year ago. Rent showed no change.

The index number of wholesale prices in Canada constructed by the Dominion Bureau of Statistics showed a slight decline in August as compared with July. Based upon average prices in 1913 as 100 the index stood at 153.3 for August as compared with 153.6 for July; 149.5 for August, 1922; 165.6 for August, 1921; and 256.9 for May, 1920 (the peak). Five of the eight groups of commodities averaged lower. The vegetable products group and the animal products group were up while the non-metallic minerals group was unchanged. Consumers' goods showed a small advance due mostly to increases in the food group. Producers' goods declined, the indexes for both building and construction materials and for manufacturers' materials being lower.

The index number based upon prices of 271 commodities in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 222.7 for August as compared with 224.7 for July; 222.8 for August, 1922; 236.4 for August, 1921; 356.6 for May, 1923 (the peak); and 136.3 for August, 1914. The most important declines occurred in cattle, sheep, and mutton, sugar, raw cotton, raw silk, jutes and hessians, pig iron, coke, raw rubber, linseed oil, and copper. The principal advances were in western grains, hogs, dairy products, potatoes, fresh fish, flax fibre, bar silver, and coal oil.

The index number calculated by the Canadian Bank of Commerce based on prices 1909 to 1913 as 100, was only slightly changed. The index of exports stood at 154.84 for August and 154.77 for July, while that for imports was 164.46 for August and 166.67 for July. The combined index of imports and ex-

ports fell from 160.67 for July to 159.65 for August. Professor Michell's index number of forty articles, twenty foods and twenty manufacturers' goods, based on prices 1900 to 1909 as 100, advanced from 176.4 for July to 178.6 for August, both foods and manufacturers' goods being higher.

## CANADIAN IMPORTS AND EXPORTS DURING JULY, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of July, 1922 and 1923, and for the four months ending July of these years, and the exports, domestic and

foreign, of similar classes of goods for the same periods.

The following table shows the imports, free and dutiable, and the exports, domestic and foreign, of the various classes of products, for the month of July, 1923.

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
	\$	\$	\$	\$
Agricultural and vegetable products, mainly foods..	2,849,421	9,382,650	25,029,710	90,657
Agricultural and vegetable products, other than foods .....	2,020,242	2,650,408	2,564,541	112,912
Animal and animal products.....	1,324,834	1,889,736	12,585,106	331,486
Fibres, textiles, and textile products.....	3,934,118	9,233,806	729,629	107,767
Wood, wood products and paper.....	1,386,749	1,841,600	25,788,184	52,497
Iron and its products.....	2,797,510	13,380,433	4,991,990	507,500
Non-ferrous metals and their products.....	1,051,538	2,386,258	6,146,248	34,964
Non-metallic minerals and products.....	7,941,007	7,007,531	2,553,892	24,582
Chemicals and allied products.....	893,409	1,163,680	1,290,403	8,373
Miscellaneous commodities.....	1,797,134	2,137,166	1,318,045	209,412
Totals .....	26,000,962	51,073,268	82,997,748	1,480,150

In July, 1923, the duty collected amount to \$11,110,921 as compared with \$11,292,504 in July, 1922.

The following comparative table shows the values of merchandise enter-

ed for consumption and the merchandise, domestic and foreign, exported in the months of July, 1922 and 1923, and in the four months ending July of these years respectively:

	Month of July		Four months ending July	
	1922	1923	1922	1923
	\$	\$	\$	\$
Merchandise entered for consumption.....	60,757,019	77,074,230	236,242,576	314,153,440
Merchandise, domestic, exported.....	70,430,235	82,997,748	243,254,469	305,205,390
Total .....	131,187,254	160,071,978	479,497,045	619,358,830
Merchandise, foreign, exported.....	1,390,393	1,480,150	4,783,975	4,737,736
Grand total, Canadian trade.....	132,577,647	161,552,128	484,281,020	624,096,566

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF AUGUST, 1923

---

**D**URING the month of August the Department received reports of two Boards of Conciliation and Investigation appointed to deal with disputes between (1) the Hollinger Consolidated Gold Mines, Timmins, Ont., McIntyre Porcupine Gold Mines, Schumacher, Ont., and Dome Mines, Limited, South Porcupine, Ont., and certain of their respective employees being miners, members of Porcupine Mine Workers' Union; and (2) the Montreal Light, Heat and Power Consolidated and certain of its employees being members of various unions employed in the production and distribution of electricity and gas.

### Applications Received

During the month four applications for the establishment of Boards of Conciliation and Investigation were received as follows: (1) from employees of the Great Northern Railway Company being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

No Board was established to deal with this matter as it was held not to be a dispute within the meaning of the statute.

(2) From employees of the British Columbia Electric Railway Company, Limited, being members of Divisions No. 101, 109 and 134, Amalgamated Association of Street and Electric Railway Employees of America.

A Board was established and the following members were appointed: Mr. A. M. Pound, Vancouver, B.C., chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Messrs. A. G. McCandless and R. P. Pettipiece, both of Vancouver, B.C., nominees of

the Company and employees respectively.

(3) From certain employees of various railways members of the Railway Association of Canada including the Canadian National Railways and Canadian Pacific Railway, being maintenance of way employees and railway shop labourers including bridge and building employees, trackmen, pumpmen, pump repairmen, signalmen, track watchmen, shop labourers and others, represented by the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

A Board was established and the following members were appointed: Messrs. R. T. Riley, Winnipeg, and David Campbell, Winnipeg, nominees of the employers and employees respectively. A chairman had not been appointed at the end of the month.

(4) From certain employees of the Canadian Pacific Railway Company being station agents, assistant agents, telegraph operators, train despatchers, traffic supervisors and linemen, members of the Order of Railroad Telegraphers. With reference to this dispute a Board had not been established at the end of the month.

### Other Proceedings under the Act

Reference was made in the August issue of the *LABOUR GAZETTE* to the establishment of a Board to deal with a dispute between the Toronto Electric Commissioners and certain of their employees being linemen, groundmen, and others concerned in the work of power transmission and distribution, members of the Canadian Electrical Trades Union, Toronto Branch. The Board of Conciliation and Investigation met in Toronto during the month of August. Application was made to the Supreme Court of Ontario by the Toronto Elec-

tric Commissioners for an injunction order to restrain the Board from proceeding with its inquiry on the grounds that it was not within the jurisdiction of the Dominion Parliament to apply the Industrial Disputes Investigation Act to municipal employees. The application of the Toronto Electric Commissioners to the Court also disputed the validity of the Industrial Disputes Investigation Act.

The application of the Toronto Electric Commission was heard by Mr. Justice Orde in the Supreme Court of Ontario, and an interim injunction was granted on August 31, the judgment

being to the effect that the Board was restrained from interfering with the business of the Commission, having no power to enter upon the premises of the plaintiffs or examine their works or exercise any of those powers conferred on such a Board by section 38 of the Industrial Disputes Investigation Act. The Board, moreover, had no authority to enforce the attendance of witnesses or the production of books, papers, ec., being limited in its powers to an investigation of a voluntary character. The effect of this judgment and the further procedure in connection therewith before the court was under consideration at the end of the month.

**Report of Board in dispute between the Hollinger Consolidated Gold Mines, Timmins, Ont.; McIntyre Porcupine Gold Mines, Schumacher, Ont.; and Dome Mines, Limited, South Porcupine, Ont.; and certain of their respective employees.**

A report was received from a Board established to deal with a dispute between the Hollinger Consolidated Gold Mines, Timmins, Ontario; the McIntyre Porcupine Gold Mines, Schumacher,, Ontario; and Dome Mines, Limited, South Porcupine, Ontario; and certain of their employees being miners, members of Porcupine Mine Workers' Union. The Board was composed of Mr. E. McG. Quirk, Montreal, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. Balmer Neilly, Toronto, and T. E. Ryan, South Porcupine, Ontario, nominees of the employers and men respectively. The report was unanimous and contained a recommendation that a conference be held between the two parties for the settlement of the differences.

The text of the report is as follows:—

**Report of the Board**

Ottawa, Ont., August 8th, 1923.

The Honourable James Murdock, M.P.,  
Minister of Labour,  
Ottawa, Ont.

Re the matter of the industrial Disputes Investigation Act, 1907, and of a dispute between the Hollinger Consolidated Gold Mines, Timmins, Ontario, McIntyre Porcupine Gold Mines, Schumacher, Ontario, and Dome Mines, Limited, South Porcupine, Ontario, (Employer), and certain of their respective employees being miners, members of Porcupine Mine Workers Union, (Employees).

Sir:—

The Board established by you under date of 17th of July, 1923, composed of Mr. Balmer Neilly, of Toronto, representing the Employers and Mr. Thos. E. Ryan, South Porcupine, Ontario, representing the Employees, and Mr. E.

McG. Quirk, of Montreal, appointed as Chairman in the absence of joint recommendation of the parties, have the honour to report:

The Board held open sessions July 24th, 25th, 26th, 27th and 28th, at Timmins, Ontario, and sessions in Ottawa, August 7th and 8th.

Appearing before the Board on behalf of the employing companies were Messrs. A. F. Brigham, of the Hollinger Consolidated Gold Mines, Limited, H. P. de Pencier, of the Dome Mines, Limited, and R. J. Ennis, of the McIntyre Porcupine Mines, Limited; on behalf of the employees, Messrs. Norman McKinnon, William McInnis and George Kenty.

The nature of the dispute being one of a demand for increased wages, statements and arguments on this subject were submitted by the respective sides and a number of witnesses heard.

A very serious effort has been made by the Board members to reach some basis upon which an unanimous report could be presented and the threatened trouble avoided. It is with genuine regret then, that we must report our inability to reach common ground.

Mr. Ryan is firmly and undoubtedly honestly of the opinion that, having regard to the high cost of living, high rents and the cost of fuel in Porcupine, the men are entitled to a substantial raise in pay, and only in an effort to reach common ground did he concede a minimum raise of six cents per hour, or the re-establishment of the wage scale

in effect prior to the last reduction in the Porcupine Camp.

Mr. Neilly is just as strongly of the opinion, based upon the evidence and facts available to the Board, that the wage scale now in effect is fair and equitable and as high as the companies, party to this dispute, might reasonably be expected to pay.

The Chairman, unfortunately, finds himself in a position where he is unable to agree with the contention of either of the other members.

The Board recognizes, however, that every dispute must eventually be settled, and in the end this controversy can only be settled by conference between the parties involved. Each must appreciate the loss entailed should a strike occur and the responsibility for delay or inaction must be borne by the party responsible.

Recognizing this as fundamental, the Board is unanimously of the opinion and recommends that the parties to the dispute irrespective of whether they are members of the Porcupine Mine Workers' Union or not get together, and further recommends that the proposed conference should take place not later than the fifteenth day of this month.

The whole respectfully submitted.

(Sgd.) E. McG. QUIRK,  
Chairman.

“ T. E. RYAN,  
Member.

“ B. NEILLY,  
Member.

## Report of Board in dispute between the Montreal Light, Heat and Power Consolidated and certain of its employees.

A report was received from the Board established to deal with a dispute between the Montreal Light, Heat and Power Company Consolidated and certain of its employees being members of various unions employed in the production and distribution of electricity and gas. The Board was composed of Mr. F. W. Stewart, Montreal, chairman appointed on the joint recommendation of the other two members of the Board; Messrs. Bernard Rose and John T. Foster, both of Montreal, nominees of the Company and employees respectively. The report was unanimous and contained recommendations for the settlement of the dispute which both parties later expressed their willingness to accept. The text of the report is as follows:—

### Report of the Board

Re Industrial Disputes Investigation Act, 1907, in the matter of difference between Montreal Light, Heat and Power Company Consolidated and certain of its employees belonging to various organizations and employed in the Electrical and Gas Departments and Shops.

To the Honourable

James Murdock, M.P.,

Minister of Labour,

Ottawa, Ontario.

Sir:—

The Board constituted by you in virtue of the above mentioned act and consisting of Mr. F. W. Stewart, chairman; Mr. John T. Foster, representing the employees, and Mr. Bernard Rose, representing the employer, beg to report as follows:—

The Board met and sat on the following days, July 30th, 31st, August 1st, 2nd, 3rd, 6th, 7th, 9th and 10th.

Application for a Board was made by the employees, and their demands were for a return to wages and conditions of labour that obtained in June 1920, and re classification of certain classes of workers.

The representatives of the men were Messrs. James Broderick, H. A. Spence and Frank Griffard. They were assisted by Messrs. R. Lynch, John Noble, Charles Hodgkiss and Alfred Lemieux. The Board requested these gentlemen to be present as witnesses in a consulting and advisory capacity and they were present on each day that the Board sat. Mr. Martin Codon acted as Secretary.

The employees submitted a brief requesting a return to the conditions mentioned in their application in order to establish higher and better standards of living. They contended that they were entitled to consideration in this connection.

The Company's reply was to the effect that the wages paid were adequate and based upon an award made in 1922, and accepted by the Company and the employees involved.

The matter was then thoroughly discussed by the parties. In accordance with the act, the Board made every endeavour to get the parties to confer as often as possible in order that it might be able to reach a conclusion in the making of its award.

In view of the request for increased wages to maintain a better standard of

living the Board has unanimously agreed that the following shall constitute the wages paid and conditions of employment and recommends an acceptance thereof for a period of two years. It desires to be as fair as possible to both sides and it feels that its award should be accepted by the interested parties. It therefore recommends:

First. — That an agreement be signed between the Company and the representatives of the employees covering wages, hours of labour and working conditions as contained in the agreement of the years 1922-1923, except as herein-after amended. This agreement to take effect on the day that the present agreement expires and to continue in effect until June 1st, 1925.

Second. — That the wages of all those employees whose rates are now from 30 to 39 cents per hour inclusive, be increased 5 cents per hour.

Third. — That the wages of all those employees whose rates are now from 40 to 55 cents per hour inclusive, be increased 3 cents per hour.

Fourth. — That the wages of all those employees whose rates are now from 56 to 70 cents per hour inclusive, be increased 2 cents per hour.

Fifth. — Monthly men covered by these agreements to be increased in like proportion.

Sixth. — Engineer exhausters to be placed and considered in the same status as licensed men, plus any increase now agreed upon as per the foregoing.

Seventh. — Meter makers or repairers other than first class men to be considered and rated as specialists as follows: 1st year rate, 38.5 cents per hour; 2nd year rate, 46.3 cents per hour; 3rd year rate, 54.1 cents per hour; and 4th year rate, 62 cents per hour. Men employed on braiding work to be considered also in the same category and paid these

rates of pay. No men to suffer a reduction in wages on account of the foregoing being put into effect.

Eight. — On account of the fact that the first year apprentice rate is not covered by sections two, three, and four, it is agreed that this rate will be 31 cents per hour.

Ninth. — Watchmen to be increased to \$3.30 per day or night.

Tenth. — The following to be added to the clause appertaining to temporary work; "If there is any evasion with reference to the application of this clause, it shall be considered as a grievance and dealt with accordingly".

Eleventh. — It is agreed with respect to the rates of pay for classifications obtaining in any department where such is not covered in the agreements for that particular department that the rates set for similar work or classification in other department schedules will be applied.

Twelfth. — Piece work rates to be increased to at least the same percentage as the increase in hourly rates now agreed upon.

The Board desires to express its very warm appreciation of the courtesy shown it by the representatives of the Company and the employees. The case for the men was very ably presented and argued. The same applies to the Company. It is delighted to learn that the good relations between employer and employees mentioned in the award of 1922 will continue. It trusts that the same good relations will be maintained for the period for which the Board recommends that its award be accepted. The whole very respectfully submitted.

(Sgd.) F. W. STEWART,  
Chairman.

" J. T. FOSTER,  
" BERNARD ROSE.

Montreal, August 10, 1923.

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1923

THE number of strikes and lockouts in Canada in existence at some time or other during the month of August was four less than in July. The time loss for August was less than in August, 1922, being 36,017 working days as compared with 450,692 working days lost in the corresponding month of the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
August, 1923.....	17	3,035	36,017
July, 1923.....	21	17,104	310,608
August, 1922.....	25	25,364	450,692

Sixteen disputes involving 2,907 work-people were carried over from July. One of the strikes commencing prior to August and one commencing during August terminated during the month. At the end of August, therefore, there were on record 15 strikes: rafting crew, South Devon; clothing workers, Toronto; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors at Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; motormen and conductors, Niagara Falls; long-shoremen, Miramichi, and seamen at Vancouver.

One dispute which terminated during the month terminated in favour of the employers and a second ended in a compromise. The latter which commenced during August was to secure a signed agreement and certain changes in working conditions. A dispute as

to the employment of certain workmen in the Drumheller Valley in Alberta was reported to have resulted in an interruption of mining operations about the end of the month, about two thousand employees being involved.

The industries chiefly affected by disputes were: Printing and Publishing, where ten disputes involving 707 employees and resulted in a time loss of 19,089 working days; Water Transportation, two strikes, 429 employees, time loss of 11,583 working days; and Clothing Manufacturing, two strikes, 153 employees and a time loss of 2,403 working days.

The record of the Department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one days duration or less, and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

Information was also received in the Department relating to disputes causing interruptions to industry during July and August, which were not strikes as above defined. At Wabamun Lake, near Edmonton, 75 coal miners ceased work July 16, for increased wages. Negotiations were carried on, the increase was granted and work was resumed July 18. On August 1, 21 street railway employees at Moose Jaw went on strike against the discharge of one of the employees. On August 2, the men return-

## STRIKES AND LOCKOUTS DURING AUGUST, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks

## (b) Strikes and lockouts commencing during August, 1923.

## MANUFACTURING—

## Clothing:

Fur workers, Toronto, Ont.	125	1,728	Commenced August 15, for a signed agreement and other changes. Terminated August 30.
----------------------------	-----	-------	--

ed to work pending a final settlement by a local arbitration board.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**FUR WORKERS, TORONTO:** — On August 15, 128 fur workers in the employ of about twenty firms went on strike in Toronto when the employers refused to sign an agreement with them such as the union had made with the members of an association of fur manufacturers. At the end of the month this strike remained unterminated.

**PRINTING TRADES IN TEN CITIES:** — The strike of printing trades in job offices in various cities which began in

the spring and early summer of 1921, for the 44-hour week, was still in progress in ten cities, and at the end of August involved 707 employees, mostly compositors, and resulted in a time loss of 19,089 working days. At the annual convention of the International Typographical Union held recently at Atlanta, Ga., it was decided to continue the strike.

**STEEL WORKERS, SYDNEY, N.S.:** — The strike of steel workers at Sydney, N.S., which commenced June 28, for increased wages, the 8-hour day and check-off system of collecting union dues, terminated on August 1. A detailed account of this strike was given in the August issue of the *LABOUR GAZETTE*.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING JULY, 1923

**T**HE British *Ministry of Labour Gazette* for August contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during July, 1923, based upon returns from employers and workpeople.

### NUMBER, MAGNITUDE AND DURATION.

— The number of trade disputes involving a stoppage of work, reported to the Department as beginning in July in Great Britain and Northern Ireland, was 37, as compared with 54 in the previous month and 21 in July 1922. In these new disputes approximately 53,000 workpeople were directly involved, and 1,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, about 41,000 workpeople were involved, either directly or indirectly, in 37 disputes which began before July, and were still in progress at the beginning of that month.

The number of new and old disputes was thus 74, involving approximately 95,000 workpeople, and resulting in a loss during July of about 1,665,000 working days. The principal new dispute was that involving dock workers at a number of the large ports. The dispute involving members of the United Society of Boilermakers and Iron and Steel Shipbuilders in federated shipyards, which began on April 30, continued throughout July.

**CAUSES.** — Of the 37 disputes beginning in July, 10, directly involving 42,000 workpeople, arose out of proposed reductions in wages; 10, directly involving 1,000 workpeople, on other wages questions; 5, directly involving 1,000 workpeople, on questions respecting the employment of particular classes or persons; 5, directly involving 2,000 workpeople, on details of working arrangements; 3, directly involving 5,000 workpeople, in sympathy with workpeople involved in other disputes; and 4, di-

rectly involving 2,000 workpeople, on other questions.

RESULTS. — Settlements were effected during July in the case of 22 new disputes, directly involving 11,000 workpeople, and 15 old disputes, directly involving 2,000 workpeople. Of these new and old disputes, 12, directly involving 3,000 workpeople, were settled in favour of workpeople; 14, directly involving 7,000 workpeople, in favour of the employers; and 11, directly involving 3,000 workpeople, were compromised. In the case of 9 disputes, directly involving 3,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in July by groups of industries:—

Groups of Industries	Number of disputes in progress in July			Number of workpeople involved in all disputes in progress in July	Aggregate duration in working days of all disputes in progress in July
	Started before July 1	Started in July	Total		
Building .....	9	5	14	4,000	26,000
Mining and quarrying .....	3	6	9	8,000	87,000
Metal, engineering and shipbuilding	8	7	15	32,000	765,000
Textile .....	1	2	3	2,000	32,000
Transport .....	2	8	10	46,000	722,000
Other trades.....	14	9	23	3,000	33,000
Total, July, 1923	37	37	74	95,000	1,665,000
Total, June, 1923	47	54	101	99,000	1,244,000
Total, July, 1922	36	21	57	46,000	443,000

ANNUAL CONVENTION OF THE FEDERATION OF CATHOLIC WORKERS OF CANADA

THE second annual convention of the Federation of Catholic Workers of Canada was held in the city of Quebec from August 11 to 16. There were present 116 delegates representing 88 unions. The president, Mr. Pierre Beaulé, occupied the chair.

About forty-eight resolutions were proposed and discussed. The more important were the following: requesting the Provincial Government to pay premiums of \$50 for each seventh, eighth and ninth child, and of \$100 for all subsequent children, the Federal Government to pay half the amount of the premiums; requesting that preference be given to workers' salaries in the payment of all debts; requesting the Provincial Government to increase the remuneration of members of Conciliation and Arbitration Councils under the Trades Disputes Act; that the provisions of the Industrial Establishments Act relating to hours of work in tex-

tile, rubber and tobacco factories be amended so as to provide for a 48 hour week for girls, women and boys under 18 years of age, on account of unwholesome conditions in these trades; and that women and girls in general be not allowed for any reason whatever to work during the noon hour; requesting the provincial authorities of Quebec to amend the Municipal Strikes and Lock-outs Act of 1911 so as to make it compulsory for both parties interested to abide by the decision of the Arbitration Board appointed under this Act which prohibited strikes of public service employees, i.e., policemen, firemen and waterworks employees; requesting the Provincial Government to place religious holidays on the same footing as Sundays and that workers in factories be given a half-holiday on Saturdays; requesting the nomination of an inspector to enforce the Sunday law; requesting the Provincial Government to amend

the Industrial Establishments Act so as to procure suitable accommodation for workers who desire to take their meals on the premises; requesting the affiliated syndicates of the Catholic Workers of Canada to direct their efforts towards the formation of co-operative societies, as a means of reducing the cost of living for a workman's family; requesting the Provincial Government to amend the bylaw relating to the early closing of stores by substituting "6 o'clock" for "7 o'clock"; requesting the Provincial Legislature to institute a Superior Council of Labour in the Province of Quebec; directing that the bill affecting the barbers of the Province of Quebec be again presented at the next session of the Legislature; requesting the Board of Hygiene and the Provincial Government to prohibit the use of air brushes in the painting of bridges, buildings, etc.; protesting against the delay in revising the Industrial Accidents Act; protesting against the delay in instituting the proposed Minimum Wages Board for women in industrial establishments; requesting the Provincial Government to adopt during the next session a law requiring fair wages to be paid on government work, the fair wage to be clearly mentioned in the contracts and to be based on rates fixed by the syndicate or unions operating in the district in which the work is to be done; requesting the Government to change the rates on foreign printed matter.

A law relating to the incorporation of professional syndicates which was drafted by Mr. Lapointe, was unanimously approved.

Several amendments were made to the Constitution of the Federation.

Port Alfred was chosen as the place for the next convention.

The following officers were elected for the ensuing year: President, Mr. Pierre Beaulé, Quebec; Vice-President, Mr. A. Morin, Hull; Secretary, Mr. J. H. A. Poirier, Quebec; Treasurer, Mr. J. Comeau, Lachine.

### Note on the Catholic Labour Movement

An outline of the history and aims of the Catholic labour movement in Canada is given in a "Souvenir Programme" issued in connection with the Convention. The movement is considered under three aspects — the religious aspect, under which labour questions are considered as primarily matters of religion; the political aspect, that is the national as opposed to the international idea of labour organization; and the industrial aspect, involving the questions of the organization of particular trades.

The movement to bring labour questions within the religious sphere forms part of the wider movement which give birth in the Province of Quebec to such social organizations as the "Catholic Social Action" (*L'Action Sociale Catholique*), and the "Peoples Social School" (*"L'Ecole Sociale Populaire"*). Labour organization on a religious basis was first proposed to the shoe workers' union in 1901 by Cardinal Bégin and was furthered especially by the efforts of Mgr. Lapointe in the district of Chicoutimi about 1907, when the Mutual Labour Federation of the North was formed; by those of Mgr. Cloutier of Three Rivers about 1913, and later by various Catholic organizations. The Catholic syndicates or unions are essentially national, and are stated to be necessarily opposed to international unionism. In several districts, such as Chicoutimi and Hull, trade unions in the accepted sense were organized from the first on the Catholic and National basis, but in many localities where labour was otherwise organized the movement was limited to the formation of associations of labour men without reference to occupation. It was from these "inter-professional" or miscellaneous groups that many of the present unions have originated. The principles which underlie the Catholic workers' organization are already followed by labour in several European countries.

## ANNUAL CONVENTION OF ONTARIO FEDERATION OF FIRE FIGHTERS.

---

**T**HE Ontario Federation of Fire Fighters held their fourth annual convention at Hamilton on August 16 to 18. The executive committee was given power to promote legislation which would combine the provisions of the Fire Departments' Two Platoon Act and the Fire Departments' Hours of Labour Act; give fire apparatus right of way when responding to fire calls; amend the Workman's Compensation Act so that it will cover departments in which there is no pension fund, and in which the members are not paid their salary when off duty by reason of sickness or accident; require all municipalities

having permanent firemen to institute pension or superannuation funds; and prohibit private parties to use the colour known as "fire department red". Resolutions were passed favouring the enactment of an old age pension law in Ontario and the instruction of school children in fire prevention.

The executive committee reported that, acting on instructions from the convention of 1922 they secured the affiliation of the Federation with the Ontario Fire Prevention League, and also associated membership in the National Fire Protection Association.

---

## ANNUAL CONVENTION OF JOURNEYMEN BARBERS' FEDERATION OF ONTARIO.

**T**HE Journeymen Barbers' Federation of Ontario held its eighth annual convention in Toronto on August 6, the president, Mr. Leon Worthall, occupying the chair. The secretary, Mr. Albert Call, reported that an effort had been made to have a barbers' licensing bill introduced in the Ontario legislature at the last session, but that the Provincial Government had at that time decided against introducing any further contentious legislation. Resolutions were adopted requiring members to adopt the official shop card containing the maple leaf and to display the same; urging all local unions to send delegates to future conventions; fixing the retiring card fee at \$5; calling on local union members to secure the support of the medical profession for the proposed barbers' license act; favouring

the selection of Indianapolis as the permanent convention city for international conventions; reaffirming the previous stand of the Federation in favour of a barbers' license law; requesting the international representative to the convention of the Trades and Labour Congress of Canada to introduce a resolution in favour of Provincial license and sanitary laws for the protection of barbers and the public generally.

The following officers were elected for the coming year: President, Leon Worthall, Toronto; 1st Vice-President, Thomas McPherson, Guelph; 2nd Vice-President, E. A. Armour, Hamilton; 3rd Vice-President, A. R. Chambers, Sarnia; 4th Vice-President, O. Lacombe, Ottawa; 5th Vice-President, George Lewis, Toronto; Secretary-Treasurer, Albert Call, St. Catharines.

## PROCEEDINGS OF THE INTERNATIONAL LABOUR ORGANIZATION (LEAGUE OF NATIONS)

---

### Fifth International Labour Conference.

**T**HE Canadian delegates who will attend the Fifth Session of the International Labour Conference at Geneva, commencing October 22, 1923, are as follows:

Mrs. James Carruthers, of London, England, representing the Canadian Government.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, representing the workers.

Mr. J. H. Sherrard, of Montreal, chairman of the board of directors of Simmons, Limited, representing the employers.

Mrs. Carruthers had already been appointed adviser to the government delegation at the Conference. She acted as substitute for the Minister of Labour at the Eighteenth Meeting of the Governing Body, which was held at Geneva last April.

### First Session of Special Advisory Agricultural Committee.

The first session of the Special Advisory Agricultural Committee, set up by the International Labour Office and consisting of three representatives of the Governing Body of the Office, three representatives of the International Institute of Agriculture at Rome, and eleven experts representing agricultural organizations of the principal agricultural countries, was held in Geneva, Switzerland, on August 23. The agenda consisted of (1) vocational education of agricultural workers, (2) workers' cooperation in agriculture, and (3) prevention of anthrax infection in

flocks. The Committee decided to prepare a questionnaire designed to obtain the fullest possible information on the subject of vocational education of agricultural workers and submit it to the Governments of all countries. The Committee was unanimous in its desire to find ways and means to secure extended facilities which will enable agricultural workers to secure land and equipment through cooperation. It is believed that in this way production will be increased and its stability insured. The representatives of the International Institute of Agriculture agreed to lay the whole question of anthrax before their next assembly and to draw the attention of all Governments to the urgency of this problem. All the members of the Advisory Committee indicated their desire for some form of effective collaboration between the International Labour Office and the International Institute of Agriculture.

On August 24 the Committee met with experts for the purpose of studying the two items on the agenda of the 1924 International Labour Conference which affect agricultural workers. All of the members of the Committee urged the importance of developing facilities for the utilization of the leisure time of farm workers. It was stated, however, that nothing should be done which might interfere in the life of the workers, but that facilities for recreation should be developed in such a way as to leave them a complete liberty of choice. Both the International Labour Office and the International Institute of Agriculture will study this question in collaboration.

## ACTIVITIES OF THE INTERNATIONAL LABOUR ORGANIZATION IN REGARD TO INDUSTRIAL DISEASES

---

AS long ago as 1880 the Swiss Federal Council, in a circular note to the governments of the leading states of Europe, suggested the holding of a conference for the discussion of international conventions on various industrial questions, including "prohibition of employment of women and children in dangerous or unhealthy processes." Owing to the unsatisfactory response, this conference was not held. Ten years later Germany convened a conference of all governments prepared to consider international agreements for the improvement of industrial conditions, including the promotion of measures to safeguard the health of the workers. This conference—the first International Labour Conference ever attended by official representatives of the governments of Europe—met in Berlin in March, 1890, and lasted fifteen days. Fourteen countries were represented. The conference discussed employment in dangerous or unhealthy processes, but took no decision. In 1897 a further Congress was held at Brussels, and considered, among other things, the standardization of legislation on unhealthy or dangerous trades.

Out of this Congress sprang the International Association for Labour Legislation, the forerunner of the present International Organization. In 1905, 15 years after the Berlin Conference, the second official international labour conference was held at Berne, on the invitation of the Swiss Government. Fifteen European States were represented. The conference considered two subjects, one of which was the prohibition of the use of white phosphorus in the manufacture of matches. A convention on the subject was drafted. It was formally adopted by a Diplomatic Conference in 1906, and signed by seven States: Denmark,

France, Germany, Italy, Luxembourg, Switzerland and the Netherlands. Great Britain adhered to the convention in 1908, Canada in 1914, New Zealand in 1911, South Africa in 1910, Norway in 1914, and Spain in 1909.

Since 1919 the following additional countries have ratified the convention: Austria, Australia, Belgium, Czechoslovakia, Esthonia, Finland, Free City of Danzig, India, Japan, Poland, Roumania and Sweden. Measures for the application of the convention have also been adopted in Argentina and Greece.

### The Peace Treaty.

One of the first acts of the Peace Conference of 1919 was the appointment of a Commission "to consider the international means necessary to secure common action on matters affecting conditions of employment". The present International Labour Organization constituted by Part XIII of the Treaty of Versailles as one of the autonomous institutions of the League of Nations, was the outcome of the deliberations of this Commission. The preamble to Part XIII of the Treaty recites various directions in which an improvement of conditions of labour is "urgently required," and these include—

"The protection of the worker against sickness, disease, and injury arising out of his employment."

In an annex to Part XIII was set out the agenda for the first meeting of the Annual International Labour Conference constituted as part of the new organization. This agenda included—

- (1) Women's employment—in unhealthy processes;
- (2) Employment of children—in unhealthy processes; and

- (3) The extension and application of the Berne Convention of 1906 on the prohibition of the use of white phosphorus in the manufacture of matches (see above).

#### The Washington Conference, 1919.

Reports showing the state of the law in various countries concerning the above questions were prepared by an Organizing Committee in advance of the Conference, which met in Washington in October, 1919. The conference appointed a Commission consisting of seven government representatives, seven employers' delegates, and seven workers' delegates, under the chairmanship of Dr. T. M. Legge (British Government) to consider items (1) and (2) given above, namely, the employment of women and children in unhealthy processes.

The Commission, in a report presented to the conference on November 19th, called attention to the difficulty of excluding discussion on the employment of men, as well as women and children, in unhealthy processes. The Committee recommended—

- (1) Prohibition of the employment of women and young persons in certain lead processes;
- (2) Regulation of the employment of women and young persons in certain other lead processes;
- (3) The inclusion on the agenda for the next Conference of the question of the use of white lead in house-painting;
- (4) The consideration by the next Conference of the question of prohibiting the use of mercury in felt hat making;
- (5) The study by the next Conference of the dangers arising from carbonic oxide gas in certain branches of gas manufacture;
- (6) The preparation by the International Labour Office of a list of the principal processes to be considered as unhealthy;
- (7) The formation of a health section in the International Labour Office to keep in touch with the medical departments of Government offices charged with the application of factory laws;

- (8) The suggesting to all Governments not already having a medical organization of this kind that they should make provision for a service specially charged with the duty of safeguarding the health of the workers, in addition to a system of efficient factory inspection.

The Commission also expressed the hope:—

That medical inspection to safeguard the health of the workers will be instituted in all countries; that disability due to occupational diseases, like disability resulting from industrial accidents, will be compensated; and that all such cases of occupational disease will be notified by physicians.

Finally, the Commission urged the conference to adopt a convention requiring the disinfection of wool in countries recognized as particularly dangerous from the point of view of anthrax, or, if this were not possible, disinfection at the port of arrival. In the case of horsehair for the manufacture of brushes, disinfection in the factory should be required. As regards horsehair for weaving or for mattresses, and the handling of hides and skins of every kind, researches should be made for a solution of the problem of the prevention of anthrax.

The report was adopted by the conference, together with a resolution proposed by Dr. Miall (British employers):

That an Advisory Committee, on which the governments, the employers and the workers shall be represented, shall be appointed without delay to keep in touch with the work of the health section of the International Labour Office.

Subsequently, the chief proposals of the Commission were embodied in formal recommendations, and adopted, as follows:—

- (1) Recommendation concerning the Protection of Women and Children against Lead Poisoning.
- (2) Recommendation concerning the Establishment of Government Health Services.
- (3) Recommendation concerning the Prevention of Anthrax.

The Conference also adopted:—

- (4) A Recommendation that each country which had not already done so should adhere to the Berne Convention of 1906, on the prohibition of the use of white phosphorus in the manufacture of matches.

A Health Section of the International Labour Office has since been created to deal with all questions connected with industrial hygiene, including comparison and co-ordination of the legislative provisions of different countries; it also undertakes general or special inquiries on unhealthy occupations. A safety service has more recently been created which studies the reports of factory inspectors in respect of accident prevention and of other organizations which enforce safety measures, prepares comparative studies of the organization of factory inspection in industrial countries, and compiles information concerning the latest developments relating to industrial safety for publication by the Office.

Notes on Industrial Hygiene prepared by the Health Section appear regularly in the *International Labour Review*, the monthly magazine of the International Labour Office, and bibliographical notes are published from time to time.

The office has also published several studies on Industrial Hygiene, including "Cancer of the Bladder among workers in Aniline Factories."

An Advisory Committee on Industrial Hygiene was established in 1921 consisting of experts from Great Britain, France, Germany, Spain, Belgium, Italy, Japan, Holland, Sweden, Switzerland, the United States and from the League of Nations.

#### The Geneva Conference, 1921.

In accordance with the suggestions of the Committee on Unhealthy Processes of the Washington Conference (see above), the agenda for the Third Meeting of the International Labour Conference, which opened in Geneva in October, 1921, included:—

- (1) Disinfection of Wool infected with Anthrax Spores;
- (2) Prohibition of the Use of White Lead in Painting.

The agenda also included:—

- (3) Protection of Agricultural Workers against Accident, Sickness, etc., and
- (4) Compulsory Medical Examination of Children Employed on Board Ship.

On these four items, five decisions—three Conventions, one Recommendation and one Resolution—were adopted, as follows:—

- (1) Resolution concerning Anthrax.
- (2) Draft Convention Concerning White Lead.
- (3) Recommendation concerning Social Insurance in Agriculture.
- (4) Convention concerning Workmen's Compensation in Agriculture.
- (5) Convention concerning Medical Examination of Children Employed at Sea.

#### Action taken on Labour Conference Proposals

A bulletin was published by the International Labour Office, Geneva, on June 13, 1923, showing the action which has been taken in various countries on the draft conventions and recommendations of the International Labour Conference, 1919-1921.

## INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES

---

THE eleventh annual meeting of the International Association of Public Employment Services was held in the King Edward Hotel, Toronto, on September 4-7. There were in attendance representatives of the Federal and State Employment Services of the United States of America, Federal and Provincial representatives of the Employment Service of Canada, among the latter being included all the superintendents of the twenty-five Ontario local offices of the Employment Service of Canada, together with a number of others who, while not officially connected with any branch of government employment service, were nevertheless identified with related interests.

The proceedings opened with an evening session on the 4th instant, presided over by Mr. Bryce M. Stewart, Director of the Employment Department of the Amalgamated Clothing Workers of America, Chicago, and formerly Director of the Employment Service of Canada. An address of welcome was given to the delegates by Mayor C. A. Maguire, of Toronto.

The Hon. Dr. Forbes Godfrey, Minister of Health and Labour for Ontario, contributed an interesting address, which he referred to as his initial public deliverance in his capacity of Minister. Dr. Godfrey regarded the functions of labour minister and health minister as being so intimately related that they were properly included in the one department, and emphatically expressed it to be his aim, during the period that he was called upon to fill such a position, to ensure as far as was humanly possible that the health of the workers in the Province of Ontario would be effectively safeguarded.

Mr. E. J. Henning, Assistant Secretary of the Department of Labour, United States Government, delivered

his address as president of the International Association of Public Employment Services, dealing with some of the problems that presented themselves in the United States, and a forceful and eloquent address was delivered by Mr. Frank Hodges, Secretary of the Miners' Federation of Great Britain. Mr. Hodges was in Toronto en route to Vancouver for the purpose of attending the convention of the Trades and Labour Congress. The special theme of Mr. Hodges' address was that of labour problems, both industrial and political, as they presented themselves in Great Britain. He portrayed in very vivid language the tremendous problems imposed upon Great Britain as a consequence of the disordered conditions prevailing generally in Europe, and stated that if Europe was unable to recover itself Great Britain must see to it that she was not overwhelmed with the debris of such a catastrophe.

The morning session on Wednesday, September 5, was devoted to the consideration of the subject of public employment services, Mr. H. C. Hudson, General Superintendent Ontario Offices, Employment Service of Canada, occupying the chair.

Mr. R. A. Rigg, Director, Employment Service of Canada, outlined the history of this organization during the past year, and stated that although the improved industrial conditions prevailing in Canada afforded a better opportunity for workers to secure employment without the aid of an employment office, during the first seven months of the present year over 32,000 more placements had been made by the offices of the Employment Service than during the same period of 1922, and he confidently predicted that by the end of the year the increase over that of last year would be not less than 50,000.

Mr. Francis I. Jones, Director General, United States Employment Service, Washington, D.C., outlined the activities of public employment services in his country. Mr. Jones indicated that forty-one of the States in the Union had now established government employment offices and that, while much yet remained to be done, very material progress had been made in the direction of a more complete organization of the Service in the United States.

Wednesday afternoon was devoted to the subject of unemployment, the meeting being under the chairmanship of the Hon. A. L. Urick, Commissioner of Labour, Des Moines, Iowa. A highly instructive paper on the subject of Labour Statistics—Employment and Unemployment, was read by Mr. Ethelbert Stewart, Commissioner of Labour and Statistics, United States Department of Labour. Mr. Stewart laid the problem of unemployment directly at the door of industry, and using the iron and steel industry as an illustration, declared that it was up to that industry to answer the question as to why there should be on its payrolls in January 441,560 names, and in October only 292,469, a difference of employment between the highest and the lowest of 149,091.

Dr. G. Reaman, Educational Director of the Toronto Y.M.C.A., contributed a paper on Education as a Solution for the Problem of Unemployment, which provoked a warm discussion on the subject of specialization of occupations and the decline of craft pride.

The morning session on the 6th instant was presided over by Mr. R. A. Flinn, Chief of the Employment Division, New York State Department of Labour. The subject under discussion was that of rehabilitation. Mr. T. G. Mill, head of the Juvenile and Handicap Section of the Employment Service office in Toronto, read a paper in which he dealt with the problem of the placement of the handicapped worker. The Psychology of Failure was the aspect of the problem of rehabilitation dealt

with by Mr. N. L. Burnette, Welfare Division, Metropolitan Life Insurance Company. The relation of workmen's compensation to the subject of rehabilitation was the theme of a paper read by Mr. T. N. Dean, Statistician, Workmen's Compensation Board of Ontario, while Mr. John E. Ransom, Superintendent of the Michael Reese Dispensary, Chicago, contributed a paper on the Rehabilitation of the Physically Handicapped Civilian.

The afternoon session specialized on the subject of migratory labour, under the chairmanship of Mr. Charles J. Boyd, General Superintendent of the Illinois Free Employment Offices, Chicago. Two interesting and practical papers were submitted at this session. One dealt with the subject of the migration of negroes in the United States from the southern to the northern states, by Mr. Phillip Brown, United States Department of Labour, Washington, D.C., in which the exodus of nearly 300,000 negroes from their homes in the south to seek new homes in the northern states since the beginning of the present year was very vividly and picturesquely portrayed.

The second paper was submitted by Mr. T. A. MacDonald, Employment Supervisor, Abitibi Power and Pulp Company, Iroquois Falls, Ont., and dealt with the problem of employment in the lumber industry. Mr. MacDonald intimately revealed the difficulties confronting his own and similar companies in obtaining sufficient suitable labour, and paid a high compliment to the Employment Service of Canada for the efficient assistance given in that direction. Mr. MacDonald, in answer to a question, stated that his firm felt obliged at times to seek the assistance of private employment agencies as such private agencies would give preferential treatment when they were remunerated for so doing, but that the offices of the Employment Service of Canada would not give preferred treatment to any employer. Mr. Mac-

Donald took occasion of the opportunity to call to the attention of the United States representatives the fact that the pulp and paper and lumber interests had been very seriously affected and the labour supply considerably reduced as a consequence of the successful efforts made by United States employers to attract from Canada labour suitable for these industries. It was pointed out to Mr. MacDonald that private commercial employment agents in eastern Canada operating in provinces where such agencies had not been made illegal had materially contributed to the exodus of skilled lumber workers to the United States, and that these private agencies had taken this action on the same principle that they gave preferred treatment to certain employers, namely, that it paid them best.

About one hundred and thirty attended the dinner session given in the King Edward Hotel on the evening of September 6. The chairman of this session was Mr. J. H. H. Ballantyne, Deputy Minister of Labour, Province of Ontario, who contributed a most thoughtful address. Miss Margaret Strong, a former member of the staff of the International Labour Office, Geneva, spoke on the subject of Agriculture and the International Labour Organization. Perhaps the most interesting and instructive contribution made during the conference was contained in the address of Dr. Fred H. Albee, Chairman of the New Jersey Rehabilitation Commission, who spoke on the subject of the Co-ordination of Rehabilitation and Its Relation to the Public Employment Service. Dr. Albee told a wonderfully romantic story, which was graphically illustrated by lantern slides, of the stupendous contribution which medical and surgical science could make toward the rehabilitation of such as had been handicapped as a result of war or industrial injuries. This work at present was only in its infancy, but in the State of New Jersey the magnitude of the problem and the value of the contribution to be made by surgical science

had been realized to such an extent that ever-increasing provision was being made for the treatment of handicapped men and women, with a view to restoring them as fully as possible to such a state of physical efficiency that they would be self-supporting. A hearty vote of thanks was tendered to Dr. Albee for the address, the whole gathering rising and singing "For he's a jolly good fellow".

At the morning session on the 7th instant a discussion took place on the subject of a proposed amalgamation of the Association with the International Association of Governmental Labour Officials. The two organizations are so very intimately related that it was the opinion of many that they should be united. It was decided, however, to defer further consideration of the matter until the next meeting of the Association, which will be held in Chicago next May, simultaneously with the meeting of the International Association of Governmental Labour Officials.

The following officers were elected for the ensuing year: President, E. J. Henning, Assistant Secretary, United States Department of Labour, Washington, D. C.; Past President, Bryce M. Stewart, Director Employment Department, Amalgamated Clothing Workers of America, Chicago; First Vice-President, Charles J. Boyd, General Superintendent, Illinois Free Employment Offices, Chicago; Second Vice-President, Hon. A. L. Uriek, Commissioner of Labour, Des Moines, Iowa; Third Vice-president, J. J. Burke, Deputy Commissioner of Labour, Connecticut; Secretary-treasurer, Marion Findlay, Department of Labour, Toronto, Ont.; Executive Committee, R. A. Rigg, Director, Employment Service of Canada, Ottawa; Francis I. Jones, Director General, United States Employment Service, Department of Labour, Washington, D.C., and Joseph Ainey, General Superintendent Quebec Offices, Employment Service of Canada, Montreal.

## DISPUTE IN THE ANTHRACITE COAL MINING INDUSTRY IN THE UNITED STATES

---

**A**N account of the negotiations between the anthracite coal mine operators in the United States and the United Mine Workers of America was given in the August issue of the *LABOUR GAZETTE*, on pages 878 and 879. After the break-off of negotiations between representatives of the operators and the union on July 27, a deadlock continued until August 20, when they met again to resume negotiations. The following day, however, negotiations were again broken off upon the rejection by the mine workers of a proposal made by the operators that the matters in dispute be submitted to arbitration, but that there be no downward revision in wages made by the arbitrators and that there be no suspension of work on September 1.

On August 24, Governor Gifford Pinchot of the State of Pennsylvania undertook to mediate in this controversy, and immediately held conference with the two parties. On August 29 he submitted a proposed basis of settlement at a joint conference. The scheme of settlement suggested by him was on the following basis:

1. Recognition of the basic eight-hour day for all employees. If longer hours are necessary at certain times, or in certain occupations, the overtime to be paid for at the rate for the eight hours.

2. A uniform increase of 10 per cent. to all employees, this increase to take effect September 1.

3. Full recognition of the union by the operators, without the check-off, but with the right to have a Union representative present when the men are paid.

4. Complete recognition of the principle of collective bargaining.

Two days later both parties met Governor Pinchot, but the terms of settlement proposed by him were not entirely acceptable to either side. It was decided, however, to continue negotiations. On September 1, on the expiration of the old agreement, work was suspended by the miners. It was reported that, of the 158,000 men employed in the anthracite coal fields, all but 4,000 walked out, only the maintenance men remaining at work in accordance with the general practice of the union.

Governor Pinchot continued the negotiations and on September 8 the representatives of the miners and operators reached an agreement for a two-year contract on the basis of the proposals of the Governor, subject to ratification by a ballot of the miners on September 17. The agreement being ratified work was resumed on September 19.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports by Dominion Bureau of Statistics on (a) Tobacco Manufacturing Industry, 1921; (b) Pulp and Paper Industry, 1922.

**T**HE Dominion Bureau of Statistics recently issued a report for the calendar year 1921 on the tobacco manufacturing industry in Canada, as well as a preliminary report on the pulp and paper industry for the calendar year 1922. Previous reports in this series relating to the various industries were outlined in the August issue of the LABOUR GAZETTE and in previous issues.

### Tobacco Manufacturing Industry in Canada, 1921.

The report on the tobacco manufacturing industry in Canada during 1921 shows that there were in operation 119 plants, of which 23 were manufacturing tobacco only, 81 cigars only, and one cigarettes only; 4 factories manufactured tobacco and cigars and the remaining 10, tobacco and cigarettes.

The following table shows the plants in operation during 1921, classified by provinces:

	Cigars and cigarettes	Tobacco, smoking etc.	All factories
Prince Edward Island.....	.....	2	2
Nova Scotia .....	1	.....	1
New Brunswick.....	1	.....	1
Quebec .....	43	17	60
Ontario .....	33	5	38
Manitoba .....	2	1	3
Alberta .....	1	.....	1
British Columbia.....	13	.....	13
Total .....	94	25	119

There was a reduction in the number of plants from 1920, as follows,—one less in Quebec, 4 less in Ontario and one less in Alberta.

The following table contains some of the principal statistics for the calendar years 1920 and 1921.

	Cigars and Cigarettes		Tobacco, smoking, etc.		All Factories	
	1920	1921	1920	1921	1920	1921
Factories reporting.....	98	94	27	25	125	119
Capital invested.....	\$33,966,154	35,757,047	13,356,437	11,993,028	47,322,591	47,750,075
SALARIED EMPLOYEES—						
Male .....	898	1,091	296	271	1,194	1,362
Female .....	186	260	58	49	244	309
Salaries paid.....	\$1,943,767	2,198,259	833,999	669,234	2,777,766	2,867,543
WAGE EARNERS (average number)—						
Male .....	2,577	2,436	785	1,012	3,362	3,448
Female .....	3,525	3,431	950	1,256	4,475	4,687
Wages paid.....	\$ 4,659,816	3,647,144	1,181,487	1,084,502	5,841,303	4,731,646
Cost of materials.....	\$17,826,151	15,374,366	10,561,596	8,064,946	23,387,747	23,439,332
Value of products.....	\$55,125,617	52,050,244	19,526,571	14,910,006	74,652,188	66,960,250

The following table shows the number of employees by sex and the amount paid in salaries and wages:

Classes of employment	Number of employees		Salaries and wages
	Male	Female	
Officers, superintendents and managers .....	213	5	\$ 846,748
Wage earners, average No...	3,448	4,687	5,731,646
Clerks, stenographers, etc...	1,149	304	2,020,795
	4,810	4,996	8,599,189

In a classification of the number of wage earners by months, January is shown to be month of lowest employment for both male and female employees, the number employed being 3,008 males and 4,142 females, while September was the month of greatest employment for both sexes with 3,760 males and 5,299 females employed during the month.

A classification of employees according to age and their weekly wage earnings for all factories is shown in the accompanying table.

#### Pulp and Paper Industry in 1922.

The preliminary report issued by the Dominion Bureau of Statistics on the pulp and paper industry in Canada during 1922 shows that there were 104 mills in operation as compared with 100 in 1921. Of these mills, 43 manufactured pulp only, 33 manufactured paper only and 28 were combined pulp and paper mills. The total production of pulp in the 71 mills engaged in its

manufacture was 2,150,251 tons valued at \$84,947,598 as compared with 1,549,082 tons valued at \$78,338,278 in 1921, representing an increase of 38.8 per cent in quantity. The 61 mills in 1922 manufacturing paper produced 1,366,815 tons of paper together with certain miscellaneous products, with a total value of \$107,085,766, an increase of 34.1 per cent in quantity over 1921. In 1922, newsprint paper which forms annually about 80 per cent of the paper production in Canada amounted to 1,081,364 tons valued at \$75,971,327, an increase of 34.3 per cent over 1921.

The capital invested in the industry increased from \$379,812,751 in 1921 to \$381,006,324 in 1922.

The total number of employees on salaries and wages in 1922 was 25,830 and their total payroll \$32,918,955.

Groups of weekly wages	Over 16 years		Under 16 years		Total
	Male	Female	Male	Female

## ACCIDENTS AND ACCIDENT PREVENTION IN NOVA SCOTIA

---

THE activities of the Nova Scotia Accident Prevention Association from month to month are described in *Industrial Safety News*, published by the Association in the interests of safety in the Province. The Workmen's Compensation Act allows certain powers to such an association when properly constituted, allowing it to make rules for the prevention of accidents, these rules, when approved by the Compensation Board, to be binding on all the employers who are included in the classes or groups affected thereby. As in other Provinces the industries of Nova Scotia are divided, for insurance purposes, into classes and sub-classes or groups, each class or group having a separate rate of assessment which is based upon its particular accident record. Each group is thus in the nature of a mutual insurance association, in which the group members are jointly liable for the compensation payments arising out of an accident at a particular plant. Under these conditions, it is pointed out, all employers should be interested in accident prevention throughout their particular industry.

As an example of the work of the Association the following case may be mentioned. The Factories Inspector of Nova Scotia recently brought an action against the operator of a sawmill for failure to comply with certain orders for the safeguarding of saws and other dangerous equipment. The defendant claimed that the orders were not practicable or necessary and that no serious accident had occurred at his mill. As

the inspector's requirements followed the regulations made by the Nova Scotia Accident Prevention Association to govern the lumbering and sawmill group of industries, a representative of that association was subpoenaed as a witness in the case. The defendant was found guilty of violation of the Factories Act and the magistrate imposed upon him a fine of \$25, with costs. *Industrial Safety News*, the organ of the Association, while expressing regret at having to assist in the conviction of a member of the association, points out that an accident resulting from this employer's negligence might have cost the employers in the lumbering group many thousands of dollars.

The association at a recent meeting noted the somewhat unsatisfactory experience of the lumbering group, and a special effort is being made to reduce the accidents in this group during the present year. Some improvement is already evident in the accident record for the second quarter of the present year, when the lumbering industry alone showed a decline as compared with the first quarter. However, the reduction is attributed in part to the fact that lumbering work being largely seasonal fewer men were exposed to the hazard of the industry in the second quarter of the year.

The following table shows the number of accidents reported in the several groups in the first and second quarters of the present year. Medical aid cases, and those involving no loss of working

time, are not included in the figures. in the second as compared with thirteen  
Seventeen fatal accidents were reported in the first quarter.

ACCIDENTS IN INDUSTRIES OF NOVA SCOTIA IN FIRST TWO QUARTERS OF 1923

Class of Industry	First Quarter of 1923		Second Quarter of 1923	
	Number	Percent	Number	Percent

THE EMPLOYMENT SITUATION AT THE BEGINNING OF AUGUST,  
1923, AS REPORTED BY EMPLOYERS

THE volume of employment as indicated in reports from employers of labour to the Dominion Bureau of Statistics showed another small increase at the beginning of August, which brought the index number very slightly above 100 for the first time since the end of 1920. This favourable position as compared with any period of 1921 and 1922 may be seen in the accompanying chart. It will also be observed that the tendency during the greater part of this year has been upward; the only retrogressive movement that has been shown since the end of December reflected the temporary cessation of operations during the Easter holidays at the beginning of April. While the trend during the greater part of 1922 was also favourable, the recovery was made from a very much lower level than in 1923, and the curve failed to attain a position higher than 4 points below the base line of January, 1920. While it is expected that further moderate improvement will be indicated during the next two or three months, it is not anticipated that the

curve during 1923 will reach a point very much above its present position.

A combined working force of 823,605 persons was recorded by the 5,862 firms making returns for August 1; the same employers reported that they had 818,535 persons working for them at the beginning of July, an expansion of rather better than 5,000 workers during the month. This caused the index number to increase from 99.5 on July 1 to 100.2 for the period under review, whereas at the beginning of August, 1922, and 1921, it had stood at 93.1 and 88.9, respectively. The extension of summer operations in construction and transportation accounted for the greater part of the gain, although there were also additions to staff in summer hotels, in the mining of metallic ores, in communication, saw mills, fruit and vegetable canneries, and electric current plants. In spite of the improvement in the three industries last mentioned, the trend of employment in manufacturing as a whole was downward, chiefly on account of curtailment of

operations in rubber factories, supplemented by smaller losses in leather, edible animal products, textiles, chemicals, iron and steel and mineral products. Logging showed further seasonal contractions and coal mining and trade were less active.

Quebec, the Prairie provinces and British Columbia registered increased employment, but in Ontario and the Maritime district reductions were recorded. In Quebec, the construction industries reported substantial expansion; the railway car shops were decidedly busier and improvement was also indicated in saw mills, railway transportation and sugar refineries. On the other hand, the production of rubber and elastic goods showed considerable curtailment, although active operations were resumed in some footwear works. In addition, textile factories experienced further seasonal dullness, and logging operators continued to report declines, also seasonal in character. General improvement was recorded in the Prairie district, the gains in railway construction and transportation being especially large. In the iron and steel, coal mining and building construction industries, moreover, there were extensive additions to staffs. The increases in British Columbia were widely distributed; fish canneries, saw mills, electric current plants, logging, metallic ore mining, railway and water transportation, railway construction, hotels and retail stores, in particular, register-

ed larger payrolls. The only decline of any importance was that in building construction. Conflicting tendencies in different groups in the Maritime provinces resulted in a 3 per cent reduction in employment. Marked activity was evidenced in highway, building and railway construction, but contractions in rolling and forging mills, in logging, coal mining and trade offset these gains. The shrinkage in Ontario on the whole was slight; leather, furniture, rubber, iron, steel, petroleum factories, logging, railway transportation and retail trade afforded less employment than at the beginning of July. Expansion in canneries, electric current works, metallic ore mining, on street railways, in building, railway and highway construction was not sufficient to counterbalance those losses. The index numbers of employment by districts are shown in the following table, which illustrates the favourable situation indicated in every province as compared with the same period of 1921 and 1922.

District	Relative weight	Aug. 1 1923	July 1 1923	Aug. 1 1922	Aug. 1 1921
Maritime Provinces..	8.9	97.8	101.0	94.0	91.2
Quebec .....	27.3	101.9	100.5	90.3	87.8
Ontario .....	41.8	97.1	97.2	90.8	85.0
Prairie Provinces ...	13.5	104.3	101.4	101.5	97.5
British Columbia....	8.5	107.2	103.9	99.8	96.3
Canada .....	100.	100.2	99.5	93.1	88.9

Four of the six cities for which separate tabulations are made, Montreal, Hamilton, Winnipeg and Vancouver, recorded improvement, while in the remaining two, Toronto and Ottawa, reductions were indicated. In Montreal, according to returns compiled from 741 concerns employing 112,249 persons as compared with 111,155 on July 1, the greatest expansion occurred in the railway car and other iron and steel shops, in building construction and sugar refineries. These gains were partly offset by contractions in boot, shoe, rubber and roofing factories, in shipping and stevedoring and retail trade. Statements were tabulated from 807 employers in Toronto, whose staffs, comprising 98,213 persons, were smaller by 496 workers or 5 per cent than at the beginning of July. Textile, rubber, and furniture factories and retail stores reported the bulk of the decline, although nearly all branches of manufacturing were slacker. On the other hand, improvement was recorded in Toronto in building and road construction, by street railway companies and in chocolate works. The changes in Ottawa were slight, the largest losses occurring in trade. Information was received from 127 firms in that city, with an aggregate working force of 11,520 persons as against 11,603 in the month before. In Hamilton considerable recovery was registered in cotton and other textile works which had been closed down in the last report. There was also substantial improvement in building construction and electric current plants were busier. The only large declines in Hamilton took place in electrical appliance, iron and steel works. The working force of the 201 employers making returns at the beginning of August aggregated 28,437 persons as compared with 27,751 workers at the beginning of July. General but moderate improvement was recorded in Winnipeg, where 527 persons were added to the staffs of the 342 concerns reporting; they had 29,241 persons working for them, while in the month before they had employed 28,714 persons. The gains in construction in

Winnipeg were the largest. Many industries shared in the expansion in Vancouver, although in a large number of cases the gains were small. Saw mills, shipping and stevedoring and retail trade registered the largest additions to staffs, while building construction showed the only declines of any size. Returns were tabulated from 223 employers in Vancouver, whose payrolls included 22,425 persons, which was 744 more than in their last report. The following table gives the index numbers of employment in these cities.

City	Relative weight	Aug. 1 1923	July 1 1923	Aug. 1 1922
Montreal .....	13.6	97.3	95.9	88.6
Toronto .....	11.9	89.1	89.5	88.1
Ottawa .....	1.4	109.3	110.2	.....
Hamilton .....	3.4	93.3	91.4	.....
Winnipeg .....	3.5	91.1	87.7	96.5
Vancouver .....	2.7	103.6	100.3	98.3

### The Manufacturing Industries

The trend of employment in the manufacturing industries was slightly unfavourable at the beginning of August. With one exception, which was due to the temporary cessation of operations over the Easter holidays, this is so far the only decline that manufacturing as a whole has shown during 1923. The heaviest contractions occurred in rubber factories, but there were reductions on a smaller scale in fish canneries, fur, furniture, leather, garment, knitting, awning, sail, tent, chemical, electrical apparatus, iron, steel, petroleum and roofing factories. On the other hand, further improvement was reported by saw mills, fruit and vegetable canneries, sugar refineries and in electric current plants. Statements were tabulated from 3,877 manufacturers employing 461,432 persons as compared with 463,127 at the beginning of July. In spite of the fact that there had been marked recovery in employment at the

beginning of August, 1922, the index number then stood nearly 8 points lower than for the period under survey.

**ANIMAL PRODUCTS — EDIBLE.** — The completion of the season's operations in many lobster and other fish canneries in the Maritime provinces caused considerable declines in employment in the edible animal products group, which increases in salmon canning in British Columbia were not sufficient to offset. Abattoirs and meat packing plants in Quebec and Ontario were also slightly more fully employed. According to returns from 196 firms, 14,554 persons were engaged in this industry as compared with 14,808 at the beginning of July. Reductions on a somewhat larger scale had been indicated during the corresponding period of last year, when employment was on practically the same level.

**FUR AND ITS PRODUCTS.**—Fur factories mainly in Ontario showed the usual dullness incidental to the midsummer season, 103 persons having been released from the payrolls of the 25 manufacturers reporting. Their staffs included 1,018 persons as compared with 1,121 at the beginning of July. This movement repeats that experienced at the same period of last year.

**LEATHER PRODUCTS.**—Boot, shoe and leather goods manufacturers reported curtailment of operations at the beginning of August, a continuation of the downward trend that has been indicated during the greater part of 1923. This decline was registered almost entirely in Ontario, while the changes elsewhere were slight. Decreases on a somewhat larger scale had been indicated during the same month of last year, but employment then was in very slightly greater volume than at the beginning of August, 1923. Statements were tabulated from 205 firms in the leather industry with a total working force of 16,807 persons as compared with 17,107 in their last report.

**LUMBER AND ITS PRODUCTS.**—Continued activity was indicated in rough

and dressed lumber mills, but these gains were partly offset by declines in furniture factories. The improvement was largely confined to Quebec and British Columbia, while in the Maritime provinces and Ontario curtailment was indicated. The payrolls of the 732 firms making returns included 61,246 persons as compared with 60,654 on July 1. More extensive improvement had been indicated at the same time of last year, but the situation then was considerably less favourable than for the period being surveyed.

**PLANT PRODUCTS — EDIBLE.**—Further seasonal increases were registered in fruit and vegetable canneries while biscuit and sugar factories also were busier. On the other hand, the production of starch and glucose declined to some extent. The employers reporting, 286 in number, had on their payrolls 26,670 persons as compared with 25,744 in the previous month. The greater part of this increase of 3.6 per cent was recorded in Ontario and Quebec, but the tendency everywhere was favourable. Additions to staff on a considerably smaller scale had been indicated at the beginning of August, 1922, when the index number stood over four points lower.

**PULP AND PAPER PRODUCTS.**—Practically no change was indicated in the pulp and paper industry as a whole at the beginning of August, increased activity in paper mills being offset by reductions in personnel in factories making paper goods. The losses were confined largely to Ontario, while in Quebec and British Columbia improvement was recorded. Statements were received from 444 firms in the group with a combined payroll of 53,806 persons as compared with 53,770 workers on July 1. The index number of employment was a good deal higher than during the same period of last year, when curtailment had been indicated.

**RUBBER PRODUCTS.**—Varying conditions were manifested by different works.

within this group, but the general tendency was downward. A large footwear factory in Quebec reopened after a shut-down during the preceding month, while plants producing general rubber and elastic goods in that province as well as footwear, tire and miscellaneous rubber goods in Ontario reported shut-downs affecting large numbers of workers. Returns from 31 manufacturers of rubber products showed that their aggregate payroll of 9,404 persons was 1,753 less than on July 1. This decline of between 15 and 16 per cent caused the index number to be lower than during the corresponding period of last year, when a slight increase in employment had been indicated.

**TEXTILE PRODUCTS.**—Employment in this industry continued to show a downward trend, although considerable improvement was indicated in thread, yarn, cloth and headwear factories. The losses in garment and personal furnishing plants were quite large, and in hosiery, knitting, awning, tent and sail works substantial declines were also reported. Quebec firms registered practically all the decline; in Ontario, there was a small reduction in personnel, while in the remaining provinces slightly increased activity was indicated. The aggregate payroll of the 579 concerns making returns included 69,504 persons or 281 less than at the beginning of July. Contractions on a very much larger scale had been reported early in August 1922, when the index number stood very little lower than for the period under review.

**CHEMICALS AND ALLIED PRODUCTS.**—The production of chemical and allied products, including soaps, drugs, fertilizers, etc., in the Maritime provinces, Quebec and Ontario declined by about 3 per cent, 209 persons having been released from the staffs of the 114 manufacturers making returns. Their payrolls included 6,658 persons as compared with 6,867 at the beginning of July. Practically no change in the situation had been shown during the same period

of last year but the index number then was slightly higher.

**ELECTRIC CURRENT.**—The trend of employment in this group continued upward; according to reports received from 82 plants they had increased their staffs by 460 persons to 11,526. All provinces shared to some extent in this expansion of 4 per cent, but the gains in Ontario and British Columbia were much the largest. Improvement had also been recorded in the same period of 1922, and the index number now stands very little above the level indicated at that time.

**ELECTRICAL APPARATUS.**—Statements were tabulated from 34 manufacturers employing 8,005 persons as compared with 8,195 workers at the beginning of July. This decline of over 2 per cent was reported very largely in Ontario and Quebec. An opposite tendency had been indicated at the beginning of August of last year, but the employment afforded then was in much smaller volume than for the period being surveyed.

**IRON AND STEEL PRODUCTS.**—A slight decline in activity was evidenced in the iron and steel industries as a whole, the 631 firms making returns having released 204 persons since their last report. Their staffs included 130,625 persons as against 130,829 on July 1. Varying tendencies were apparent within the group; increases were recorded in general machinery, railway car, iron and steel fabrication works but they were not sufficient to offset declines in the crude, rolled and forged, agricultural implement, steel shipbuilding, foundry and machine shop divisions. The reductions were confined to the Maritime Provinces, Quebec and Ontario, while elsewhere improvement was indicated. Substantial recovery from losses registered in the preceding month had been experienced at the beginning of August of last year, but the index number then stood some 14 points lower than for the period under review.

**MINERAL PRODUCTS.**—The manufacture of petroleum products, baking powders, oxygen and acetylene gases in Ontario afforded less employment than in the month before. Reports from 75 concerns in the mineral products group showed that they had reduced their personnel by 205 workers or 2 per cent, their payroll having declined from 9,969 on July 1 to 9,764 on August 1. Lowered activity had also been indicated during the corresponding period of last year, when the situation had been considerably less favourable.

**MISCELLANEOUS MANUFACTURING INDUSTRIES.**—Sixty-four employers in this division reported that they employed 3,912 persons as compared with 4,061 employees in the month before. A large share of the decline occurred in roofing material factories in Quebec.

#### Logging

Further severe losses of a seasonal character were recorded in this industry at the beginning of August, 2,169 persons having been released by the 203 firms making returns. They employed 15,805 persons on August 1, that number being 12 per cent smaller than at the beginning of July. Firms in the Maritime provinces, Quebec and Ontario registered this decrease, while in the Prairie provinces and British Columbia an upward tendency was evidenced. Seasonal curtailment had also been registered during the same period of last year, but was soon followed by pronounced expansion as men were sent to the bush towards the end of August. The level of employment during the present year is considerably higher than in the same month of 1922.

#### Mining

**COAL MINING.**—Fluctuations were reported in this industry in different parts of the country, but the balance of employment was unfavourable. In the Maritime provinces and British Columbia contractions were recorded, while improvement occurred in the Alberta coal

fields. A total working force of 28,346 persons was indicated by the 93 operators making returns who had employed 28,824 workers at the beginning of July. This reduction caused the index number to be slightly lower than on August 1, 1922, when a small increase in employment had been registered.

**METALLIC ORES.**—Employment in gold, copper, silver, zinc, nickel and other metallic ore mining in Ontario and British Columbia showed a further increase, bringing the index number to 132.4, the highest point reached since this series commenced. Statements were received from 46 concerns employing 11,952 persons as compared with 11,447 at the beginning of July. Moderate improvement had also been shown during the corresponding period of last year.

#### Communication

Telegraph and telephone companies afforded more employment than in the last report, having added 339 persons to their staffs. Returns were furnished by 166 employers in the communication group with an aggregate working force of 21,612 persons as compared with 21,273 at the beginning of July. This increase of 1.6 per cent was fairly generally distributed over the country, the gains on telegraphs being rather larger than on telephones. Rather more pronounced expansion had been indicated early in August of last year, when the index number stood slightly lower than for the period under review.

#### Transportation

**STREET RAILWAYS AND CARTAGE.**—A favourable tendency was again evidenced in this division, repeating the movement indicated at the same time of last year. The index number then, however, stood some 14 points higher than for the period under review. Statements were compiled from 103 firms in this division, whose payrolls, totalling 20,003 workers, were larger by 494 persons or 2.5 per cent than at the beginning of July. Over half this in-

crease was recorded in Ontario, while the rest was distributed over the country.

**STEAM RAILWAYS.**—Further large additions to staffs were indicated by steam railways at the beginning of August. Quebec, the Prairie provinces and British Columbia shared in the expansion, while losses were recorded in Ontario and, in less degree, in the Maritime provinces. The payrolls of the 121 concerns and divisional superintendents reporting included 80,030 men as compared with 79,258 at the beginning of July. This increase of 1 per cent was not so extensive as that registered at the same period of last year, when a much smaller number of persons had been employed by the operation departments of the railways.

**SHIPPING AND STEVEDORING.**—Some slight expansion in employment was indicated in this industry, British Columbia firms showing considerable increases which were partly offset by declines in Quebec and Ontario. In the Maritime provinces practically no change was recorded. According to reports from 61 concerns, 14,749 persons were employed as compared with 14,594 in the month before. The index number of employment at the beginning of August, 1922, had been somewhat higher, the increases reported in that month exceeding those registered during the period being surveyed.

#### Construction and Maintenance

**BUILDING CONSTRUCTION.**—The trend of employment in this industry continued to be decidedly upward, an increase of 2,933 persons or 11.8 per cent being recorded by the 315 contractors making returns, whose payrolls included 27,862 persons. All provinces except British Columbia shared in the upward movement, which was, however, most apparent in Quebec and Ontario. Large increases had also been registered at the beginning of August last year, but the index number now stands higher than

at any other period of the record, being over 20 points above last year's level.

**HIGHWAY CONSTRUCTION.**—State-ments tabulated from 52 concerns engaged on road construction showed that they employed 12,348 persons as compared with 10,575 at the beginning of July. Approximately 73 per cent of this increase of 16.8 per cent occurred in the Maritime provinces; in Ontario and Quebec moderate improvement was also indicated. The tendency at the beginning of August last year had been downward and the index number then stood a good deal lower than for the period under discussion.

**RAILWAY CONSTRUCTION AND MAINTENANCE.**—Continued large additions to staffs were recorded in railway construction and maintenance, mainly in Ontario and the Prairie provinces, although there was also some expansion in the Maritime provinces and British Columbia. The working force of the 33 concerns and divisional superintendents making returns aggregated 54,067 persons as compared with 51,403 at the beginning of July, the difference representing an increase of 5.2 per cent. Additions to staffs on a somewhat larger scale had been recorded during the same period of last year, when operations were not so extensive as at the beginning of this August.

#### Services

**HOTELS AND RESTAURANTS.**—The number of persons employed in hotels and restaurants showed another increase at the beginning of August, when 336 persons were added to the payrolls of the

68 houses reporting. As their staffs aggregated 8,369 persons as compared with 8,033 on July 1, this was an increase of 4.2 per cent, the greater part of which was recorded in Quebec and British Columbia. Improvement on a much smaller scale had been indicated during the same period of last year, and the index number then was nearly 22 points lower.

#### Trade

Summer dullness in trade affected employment in retail stores to a considerable extent, although wholesale establishments generally were slightly busier. The declines in the former division occurred in Ontario, Quebec and the Maritime provinces, while slight improvement was indicated in British Columbia and the Prairies districts. Returns were compiled from 545 retail and wholesale establishments, whose sales force of 53,977 persons was smaller by 483 workers or .9 per cent than at the end of July. The tendency during the same period of last year had also been downward and employment then was in somewhat smaller volume than for the period under review.

The table on page 1013 shows the index numbers of employment by industries as on August 1 and July 1, 1923, and August 1, 1922 and 1921. As usual, the first column gives the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review. (Number of workers employed in January, 1920 equals 100).

## EMPLOYMENT OFFICE REPORTS FOR JULY, 1923

**T**HE volume of business transacted by the offices of the Employment Service of Canada during July, 1923, was very considerably larger than during July of the previous year, while an expansion over June, 1923, is indicated. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, shows a recovery during the first half of July from the slight depression noted in the curves of applications, vacancies and placements during June. This was followed by a marked rise in the curve of vacancies during the latter half of the month under review, the expansion being due largely to the increased calls for farm labourers in all the provinces and is the beginning of an active demand for harvesters in the Western provinces. The curves of applications and placements declined very slightly during the latter half of July. The reports from the offices show that the average number of applications registered daily at the offices was 1,772

and 1,740 during the first and second half of the month, respectively, as compared with 1,612 and 1,626 during the same periods a year ago. During the latter half of June, 1923, applications averaged 1,629 daily. Employers notified the Service of an average of 1,587 vacancies daily during the first half of July, as compared with 1,585 during the preceding period and with an average of 1,444 during the first part of July, 1922. The average number of vacancies reported daily during the latter part of July was 1,770, as contrasted with 1,483 during the same period a year ago. The offices effected an average of 1,423 placements during the first half of July and 1,389 during the latter half, as compared with 1,192 and 1,218 during the corresponding periods in 1922. The average number of placements made during the latter half of June, 1923, was 1,344. During the period under review the average number of placements in regular employment was 1,139 and 1,110 during the

first and second half of the month, respectively, while placements in casual work averaged 284 and 279, respectively.

The following table gives the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months)...	268,001	37,904	305,905
1920 .....	366,547	79,265	445,812
1921 .....	280,518	75,238	355,756
1922 .....	297,827	95,695	393,522
1923 (7 months)....	151,658	77,015	228,673

During the month of July the offices made 36,575 references to employment and effected a total of 35,099 placements. Of the latter, the placements in regular work numbered 28,073, of which 24,842 were of men and 3,231 of women, while the placements in casual jobs totalled 7,026. The number of vacancies reported to the offices was 42,244, of which 33,242 were for men and 9,002 for women. Applications for work registered during the month numbered 43,859, of which 34,112 were from men and 9,747 from women.

Placements in regular employment by provinces were as follows: Nova Scotia, 391 men, 75 women; New Brunswick, 470 men, 89 women; Quebec, 1,365 men, 364 women; Ontario, 9,802 men, 1,144 women; Manitoba, 2,775 men, 495 women; Saskatchewan, 3,761 men, 348 women; Alberta, 3,023 men, 315 women; British Columbia, 3,255 men, 401 women.

#### MARITIME PROVINCES

A shortage of experienced farm hands to fill the increased number of orders for workers for haying and general farm work was reported from Amherst, Sydney, Moncton and St. John. Road improvements, highway construction and bridge repairs, were well under way and from Amherst, Halifax, New Glas-

gow and Chatham, many labourers, carpenters and teamsters were placed. Calls were received for all classes of workmen for the logging and lumbering industries, including pulpwood peelers and cutters, choppers, sawyers and engineers. Housemaids and cook generals were required in all localities but there was a scarcity of experienced workers.

#### QUEBEC.

In this province a fair demand for agricultural workers was reported. There were no heavy calls for workers in the building and construction industries although an increased number of orders was received for bricklayers, plasterers and carpenters. Road work and street repairs gave employment to many labourers at Montreal, Quebec and Three Rivers. Longshoremen and marine workers were required at the ports. A few asbestos miners were called for in the Thetford district. The manufacturing industries were active with a few opportunities offering for employment in the metal trades.

#### ONTARIO

The offices reported continued difficulty in securing the necessary supply of general farm labourers and workers for the hay harvest. Placements in this group, however, were very large. Rapid progress was evident in the construction groups and increased activities were reported on road and highway work, power plant, dam and bridge construction, and numbers of labourers, teamsters and graders were called for. Street paving and other civic projects employed many workers in the municipalities, and in addition, carpenters, bricklayers, plasterers and building tradesmen were required in considerable numbers. Extensions and maintenance work on railway lines gave employment to many labourers near North Bay, Timmins, Fort William, Cobalt, Ottawa and St. Thomas. The demand for river drivers, bushmen and mill workers continued fairly active in North Bay, with sufficient applicants to fill the positions

available. From Ottawa and Cobalt miners and muckers for the lead and metal mines were placed. A fair demand was shown in the manufacturing industries. Experienced operators for woolen mills were required at Oshawa, and moulders, coremakers and machinists were in demand at Hamilton, Oshawa and Sarnia. At Chatham a few canneries were employing numbers of women workers. The offices reported an increased number of orders for domestic workers for hotels and institutions as well as for cooks and housemaids for city and country work.

### MANITOBA

An increased number of orders for general farm labourers was received at all the offices. At Winnipeg experienced tractor operators were in demand and no difficulty was found in securing men. Activities in building and construction showed a marked advance, with many new projects well under way, and although operations were confined largely to residential construction, many were placed on road work and sewer and watermain construction. Carpenters for elevator work were transferred to Port Arthur and Kenora, Ontario, and labourers and teamsters for railway maintenance and extensions were sent to Nakina, Ontario. In the logging industry a few placements were effected, the calls being mainly from South-eastern Manitoba and Western Ontario.

### SASKATCHEWAN

Hay and rye harvesting created an active call for workers in some localities while generally throughout the province farmers were inquiring regarding the supply of harvesters for the coming month. An increased number of orders for married couples was received and filled, although difficulty was found placing couples with children. Labourers and teamsters for road and street work were placed at Yorkton, Saskatoon and Regina, while carpenters for elevator construction and general work were in demand at Moose Jaw, Saskatoon and

Regina. Railway maintenance work absorbed a number of labourers near Swift Current, Saskatoon, Regina, Prince Albert and Moose Jaw. A fair demand for domestic workers and housekeepers was reported, with a scarcity of applicants, while the nominal demand for charwomen and casual workers was not sufficient to supply work to the applicants available.

### ALBERTA

The vacancies for agricultural workers were still in excess of the placements made and several applicants were transferred from Vancouver to fill vacancies near Calgary. Improvement was shown in the building industry with few tradesmen and mechanics unemployed. Section men, extra gang hands, bridge workers and teamsters were placed with the railway companies for extensions and maintenance work near Medicine Hat, Calgary, Drumheller and Edmonton. In the logging industry a few millmen, sawyers, cutters, etc., were called for at Edmonton, Lethbridge and Calgary. At Drumheller and Edmonton a few coal miners were required but, on the whole, there was a surplus of workers available in this district. Increased calls for housekeepers and maids for city and country were received at all the offices.

### BRITISH COLUMBIA.

No marked change was reported in the agricultural group in this province. A few placements were made from all the offices, some workers being sent from Vancouver and Victoria to the Prairie Provinces. Numerous opportunities were offered for employment in the building industries, especially for carpenters, labourers and indoor workers, at Vancouver and New Westminster. Dam construction near Prince Rupert, road work in various sections of the province, as well as the usual railway maintenance work, absorbed numbers of labourers and teamsters. Logging operations continued brisk and sawmills and lumber mills were employing many experi-

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF JULY 1923.

\*137 Placements effected by offices since closed.

enced workers. Although development work in the mines was progressing rapidly, few calls for workers were received. A shortage of quartz machine miners was reported. There were continued requests for hotel and restaurant workers with few trained women available, while the calls for housekeepers and casual workers were in the same volume as previously reported.

### Movement of Labour

During July 1923 the offices of the Employment Service of Canada made 28,075 placements in regular employment, of which 17,052 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,476 were granted the Employment Service reduced rate, 1,817 going to points within the same province as the dispatching office and 659 to other provinces.

Quebec offices issued 228 special reduced rate certificates; 82 to bushmen and mill hands going from Montreal and Quebec to points within the province and 146 to bushmen going from Hull, Montreal and Quebec to Pembroke, Sault Ste. Marie, Sudbury and Timmins, Ontario. Ontario offices dispatched 1,016 workers at the reduced rate to points within the province. Of these, about 320 were bushmen, river drivers and mill hands, going to camps near North Bay, Ottawa, Sudbury and Sault Ste. Marie, and approximately 600 were railway construction labourers and maintenance workers going to camps near Port Arthur, Timmins and North Bay. The remainder included bricklayers, blacksmiths, drillers, 1 deck hand, 6 fire fighters and 6 marine firemen, going to various points in the province. From Windsor 2 oil refinery workers were sent to Sarnia, from Sudbury 2 miners were sent to Sault Ste.

Marie, and 1 smelter worker from Timmins to the Ottawa zone. In Manitoba 595 workers benefited by the Employment Service reduced rate, of which 207 were going to points within the province. Of these, 165 were farm workers, 15 were teamsters, 2 blacksmiths, several sawmill workers and 16 women domestic workers. The majority of the 48 transfers to Saskatchewan were of farm hands, with a few teamsters, 1 bricklayer and several domestic servants. The 341 persons sent to Ontario included 1 metal miner to Cobalt, 208 construction labourers, 68 bushmen and sawmill men, 26 cooks, 25 teamsters, one hotel clerk and 4 women workers, for points in the vicinity of Port Arthur. Saskatchewan offices granted 131 certificates, of which 124 were to persons travelling to work within the province, 4 to berry pickers from Regina and Saskatoon to London, Ontario, and 1 to a farm hand going to Edmonton, Alberta. The transfers within the province were of farm workers, road teamsters, blacksmiths and elevator carpenters, for various districts. Transportation vouchers issued by the Alberta offices numbered 257, of which 234 were to persons travelling to points within the province, 5 to fruit pickers going to Vancouver, B.C., 17 to farm hands going to Saskatoon and North Battleford, 1 to a road construction worker going to Swift Current, Saskatchewan. Of the provincial transfers, 124 were of farm hands placed from Calgary and Edmonton; about 40 were bushmen and mill hands; approximately 30 were of miners; the remainder being domestic servants. The offices in British Columbia dispatched 249 workers at the reduced rate, 154 to points within the province and 95 to other provinces. A majority of the provincial transfers were berry pickers, farm workers and bushmen with several miners, carpenters, teamsters and general labourers.

From Vancouver 59 farm hands were transferred to Alberta points and 36 farm workers to offices in Saskatchewan.

Of the 2,476 workers who travelled at the Employment Service reduced

rate, 1,200 were carried by the Canadian Pacific Railway, 1,188 by the Canadian National Railways, 87 by the Timiskaming and Northern Ontario Railway and 1 by the Pacific Great Eastern Railway.

---

### BUILDING PERMITS ISSUED DURING JULY, 1923

**A**CCORDING to reports tabulated by the Dominion Bureau of Statistics, the value of prospective building in fifty-six cities showed a further decrease during July, when the building permits issued declined to \$12,544,137 from \$14,345,573 in June. In July of last year they had stood at \$15,447,545. There was, therefore, a reduction of 12.6 per cent in the first comparison and of 18.8 per cent in the latter. Forty-five cities furnished detailed reports showing that they had issued some 1,200 permits for dwellings at an approximate valuation of \$5,300,000, and for nearly 2,800 other buildings estimated to cost over \$6,300,000. Since the erection of several houses, apartments, stores, etc., is very frequently authorized in one permit, the number of buildings to be put up would be somewhat larger.

New Brunswick, Manitoba, Alberta and British Columbia reported a higher value of permits issued than in June, the increase of \$449,391 or 72.8 per cent in British Columbia and of \$232,256 or 59.7 per cent in New Brunswick being the largest. The remaining provinces recorded declines. In Quebec the value of anticipated building fell from \$3,987,550 in June to \$2,442,017 in July, a decrease of 38.1 per cent. This was the largest loss registered, while the reduction of \$1,149,662 or 14.2 per cent in Ontario was also extensive.

In comparison with the returns for July of last year, New Brunswick and

British Columbia showed increases, but elsewhere the value of the building permits issued declined. The British Columbian cities reporting registered an increase of \$148,105 or 16.1 per cent, Ontario recorded the largest decrease of \$1,582,832 or 18.6 per cent, and Quebec came second with a loss of \$1,088,853 or 30.8 per cent.

Montreal and Toronto registered declines in the value of the permits issued as compared with both June, 1923 and July, 1922; in Winnipeg there was a slight increase in the former and a large decrease in the latter comparison, while Vancouver reported gains in both cases. Of the smaller centres, Fredericton, Sherbrooke, Hamilton, Kitchener, St. Catharines, Sarnia, St. Boniface, Moosejaw, Edmonton, Lethbridge, Medicine Hat, South Vancouver and Victoria showed increases in both comparisons.

The value of the building permits issued from the beginning of the year to the end of July showed a decline as compared with the corresponding months of 1922, but an increase over the same period of 1921, the figures being \$83,598,348 for 1923, \$85,742,989 for 1922 and \$65,451,255 for 1921. The accompanying table shows the value of the building permits issued during July as compared with June, 1923, and with July, 1922, the 35 cities for which records are available since 1910 being marked by asterisks.

FAIR WAGE CONTRACTS, AUGUST, 1923

DURING August, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to two fair wage contracts awarded by the Department of Public Works. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to the supplies ordered by the Post Office

Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Dredging berths at wharves, Fort William, Ont. Name of contractor, O'Brien and Martin, Port Arthur, Ont. Date of contract, August 1, 1923, Amount of contract, Class "B", 46 cents per cubic yard, place measure.

Cleaning and painting of steel work of Interprovincial Bridge across Restigouche River at village of Matapedia, Que. Name of contractors, J. G. McLean and Russell Mawhinney, Charlo Station, Upper Charlo, N.B. Date of

contract, August 23, 1923. Amount of contract, \$2,749.

#### POST OFFICE DEPARTMENT

The following is a statement of payments made in August, 1923, for supplies ordered by the Post Office Department subject to the Regulation for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals	745.40
Making and repairing rubber stamps, daters, etc.....	71.21
Making up and supplying letter carriers' uniforms, etc.....	10,472.76
Repairing scales.....	59.20
Repairing boxes and hampers, etc.....	70.50
Supplying ink.....	172.65
New mail boxes.....	373.50
Mail bag fittings.....	1,274.60

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Manufacturing: Pulp, Paper and Paper Goods

**THOROLD, ONT. — ONTARIO PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.** Agreement to be in effect from May 1, 1923, to May 1, 1924, with thirty days' notice of change.

Permanent employees inside the mill to maintain membership in union,

with assistance of the company. New employees, if not union men, to join union within fifteen days. If men are laid off, the older in point of service to have preference of re-employment.

Mill to operate not over six days per week, 8 a.m. Monday to 8 a.m. Sunday; pulp mills, six to six and one-half days per week when pulp is needed. Certain maintenance work may be performed on paper machines during Sunday shut down.

Strikes or lockouts not to occur during period of this agreement. Parties to agreement to strive for maximum production.

**Mill Rules.** — Grievances to be reported in writing by the organization to the superintendent, who shall adjust the matter, or failing this, shall confer with the president of the company, and the union representative, or failing agreement, matter to be referred to arbitration.

Hours for day workers 8 a.m.-12 noon; 1 p.m.-5 p.m. Overtime, time and one-half, also for Sundays and holidays. Hours for tour workers eight per shift, with time and one-half for overtime.

**Wages, per hour.** — Electricians, 75-91½ cents; helpers, 51-66 cents; ap-

prentices, 40 cents; maintenance men, operators, 75 cents. Groundwood mill: repairmen, 74 cents; oilers, 54 cents; grindermen, 55 cents; cleaners, 45 cents. Sulphite mill: cooks, 80½ cents; acid makers, 75 cents; millwrights, 76 and 89 cents; labourers, 45 cents. Mixing room: beatermen, mixers, 52 cents. Machine room: machine tender, \$1.18-\$1.30; back tender, 98 cents-\$1.17; other machine tenders, 55-82 cents; oilers, 55 cents; cleaners, 49 cents; machine tender on wrapper machine, 78 cents; finishers, 52 cents, loaders, 52 cents, operators on supercalender and winder, 78 cents; firemen in steam plant, 64 and 73 cents; hoist engineers, 85 cents; machinists, 72½ and 89 cents; millwrights, 76 and 89 cents; steamfitters, 71 and 82 cents; painters, 76 cents. Barkers, 52 and 55 cents. Construction: masons, 95 cents; carpenters, 84 cents; iron workers, 82 and 98 cents; labourers, 45 cents.

#### Manufacturing: Printing and Publishing

ST. JOHN, N.B. — LOCAL NEWSPAPER PUBLISHERS AND BOOK AND JOB OFFICES, AND TYPOGRAPHICAL UNION No. 85. Agreement in effect from May 1, 1923, to May 1, 1924.

Only union members to be employed if available.

Overtime and holidays, time and one-half; Sundays, double time.

Hours, book and job offices, 44 per week; on newspapers, eight per day, seven and one-half per night.

No piece work allowed.

Provision made for settling disputes by arbitration.

Minimum wages per week: day work, book and job, foremen, linotype operators and machinists, \$29.35; floor hands and monotype keyboard operators, \$27.50. Newspapers, all foremen, linotype operators and machinists, \$32; floor hands, \$30. Apprentices, third year, two-fifths of journeymen's pay; fourth year, one-half; fifth year, two-

thirds. Night work, foremen, operators and machinists, \$35; floormen, \$33. Apprentices scale, same proportion as for day work.

On newspapers, one apprentice to six journeymen; in job offices, one to every four — not more than three in an office. Apprentices to serve five years. On reaching third year, apprentices to be enrolled in the I.T.U. course in printing, and to make quarterly reports to the local apprentice committee to show proficiency attained.

BRANTFORD, ONT. — CERTAIN LOCAL COMMERCIAL AND JOB PRINTING OFFICES AND TYPOGRAPHICAL UNION No. 378. Agreement to be effective from October 1, 1922, until September 30, 1925.

Agreement is the same as previously effective and summarized in the LABOUR GAZETTE for January, 1922, with the exception of the wage scale. The present scale is as follows:

Minimum wages per week: machine operators and floormen, \$31.68 for day work; \$33.68 for night work. Machinist-operators and foremen, \$34.48. Apprentices, per week, third year, \$10.43; fourth year, \$12.43; fifth year, \$14.43.

HAMILTON, ONT. — HAMILTON PUBLISHERS' ASSOCIATION AND HAMILTON PRINTING PRESSMEN AND ASSISTANTS' UNION No. 176. Agreement to be effective from July 1, 1922, until July 1, 1924.

Hours of work, eight per day, seven and one-half per night.

Minimum wage per week, journeyman pressman, \$37.50. Apprentice, \$14, with \$2 increase each year, until end of term. Apprentice to take International Pressmen's Union course in fourth year.

Overtime, time and one-half to 10 p.m., thereafter and Sundays and holidays, double time.

If union members are not available, non-union men may be employed.

**SARNIA, ONT. — CERTAIN LOCAL NEWS AND JOB OFFICES, AND INTERNATIONAL TYPOGRAPHICAL UNION No. 837.** Agreement to be in effect from February 1, 1923, to December 31, 1925.

Only union men to be employed.

A joint standing committee to decide questions about agreement and to settle disputes. Failing settlement, disputes to be referred to a board of arbitration.

Hours per week, news offices, 48; book and job offices, 44. Overtime in any one day (over eight hours) time and one-half. Sundays and holidays, double time.

Wages per week, journeymen printers, February 1-June 30, 1923, \$35; July 1-December 31, 1923, \$36; January 1-December 31, 1924, \$37; January 1-December 31, 1925, \$38.50.

Apprentice scale: third year, three-eighths of journeymen's scale; fourth year, first six months, one-half; second six months, five-eighths; fifth year, first six months, three-quarters; second six months, seven-eighths. Wages of apprentices on machine, one-half of journeymen's scale per day for first ten weeks; three-fifths for next five weeks, and four-fifths for the following five weeks. After twenty weeks, apprentices, if competent, will receive journeymen's scale. One apprentice to four journeymen.

Foreman and local apprentice committee to determine whether applicants for apprenticeship are mentally and physically fitted for the trade. Apprentices to undergo yearly examination. Beginning with third year, apprentices to be enrolled in the I. T. U. course in printing.

This contract to be null and void in case of trouble with an allied craft, provided trouble cannot first be settled by arbitration.

**SASKATCHEWAN. — CERTAIN NEWS-PAPER PUBLISHERS IN REGINA, SASKATOON AND MOOSE JAW, AND THE STEREOTYPERS' AND ELECTROTYPERS' UNION.** Agreements in effect from June 1, 1923, to May 1, 1925.

Union to supply stereotypers, with exception of machinist. Union members to be given the preference of employment.

Hours per day, eight; per night, seven and one-half.

No pooling of hours to be allowed.

One apprentice to each office and one additional where four journeymen are employed.

Scale for apprentices: Per week, day work, \$17; night work, \$19; \$1.50 increase every six months.

Wages for journeymen, per hour, days, 91  $\frac{2}{3}$  cents; nights, \$1.04 $\frac{1}{2}$ . Overtime up to four hours, time and one-half; thereafter, double time. Foremen, not less than \$5 per week of six days or six nights in advance of journeymen's scale.

Holidays, time and one-half and double time; on morning papers, a night's work to consist of five hours. Sunday, double time.

The agreement protects the employers against walk outs, strikes, or boycotts; all differences to be submitted to arbitration.

#### **Manufacturing: Foods, Drink and Tobacco**

**LONDON, ONT. — CERTAIN BREWERY PROPRIETORS, AND INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS No. 381.** Agreement to be in effect from April 1, 1923, to April 1, 1924.

Only union members to be employed, if available. Non-union men to join the union within two weeks. Extra help to have a permit card.

Discharge to be issued only by the manager or brewmaster.

Grievances to be submitted to arbitration.

Hours per week, during May-August, fifty; during September-April, forty-five. Overtime, time and one-half.

Wages, per week, bottlers, \$21; machine hands, \$22; cellarmen, \$24; kettlemen, \$23; coopers, \$26; chauffeurs and drivers, \$21; maltsters and labourers, \$21.

Holidays to be granted without deduction of pay. Work on holidays, time and one-half.

#### Construction, Buildings and Structures

QUEBEC, QUE. — CERTAIN LOCAL CONTRACTORS, AND THE NATIONAL UNION OF PLASTERERS. Agreement in effect from May 1, 1923, for the season.

Wage per hour, 90 cents; hours per day, nine.

BRIDGEBURG, ONT. — CONTRACTORS OF BRIDGEBURG, FORT ERIE AND VICINITY, AND CARPENTERS AND JOINERS OF AMERICA No. 1850. Agreement to be in effect from June 1, 1923, to June 1, 1924, and from year to year unless cancelled by April 1.

Grievances to be submitted to a committee of three of each party.

Hours per day, eight for five days and four on Saturdays.

Saturday afternoons, Sundays and holidays, double time.

In shift work, second and third shifts to be eight hours' time for seven hours' work.

Minimum wage per hour, journeymen, 80 cents; foreman, not more than 5 cents per hour extra.

Only union men to be hired if available. Non-union men to have fourteen days' notice to join union.

Business agent of union may visit men on the job at any time.

FORT WILLIAM AND PORT ARTHUR, ONT. — TWIN CITY BUILDING CONTRACTORS, AND BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION No. 25. Agreement to be effective from April 1, 1923, to March 31, 1924.

Wages per hour, \$1. Hours per day, eight for five days and four on Saturday. When two shifts are being worked, no member to work more than eight hours in twenty-four. When three shifts are worked, eight hours' pay for seven hours' work.

Overtime and holiday work only in emergencies, and then at double pay.

For work outside the cities, walking time to be allowed, and transportation for out of town work. Board and lodging to be paid when men cannot get home.

Business agent to have access to job by applying to the works officer, and not to interfere with men outside of official duties.

WINDSOR, ONT. — ELECTRICAL CONTRACTORS OF THE BORDER CITIES, AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS No. 663. Agreement to be in effect from June 18, 1923, until May 31, 1924, unless annulled on ninety days' notice.

No strikes, lockouts or stoppage of work to take place without 48 hours' notice.

No contractor to be given better terms than parties to the agreement. Foremen, journeymen and helpers to be procured from the local union.

A conference committee to be elected by each party each year.

Wages per hour: journeymen, \$1; helpers, 1-2 years 50 cents; 2-3 years, 60 cents; 3-4 years, 75 cents.

Not more than one helper to each three journeymen.

Transportation expenses to be paid for men working outside the city limits.

No union member may make contracts for repairing or installation when he is working under this agreement.

Hours per day, eight for five days and four on Saturdays.

Overtime to 6 p.m., time and one-half; after 6 p.m., and Sundays and holidays, double time.

#### Transportation and Public Utilities

WINNIPEG, MAN. — WINNIPEG ELECTRIC RAILWAY COMPANY AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS LOCALS No. 1037 AND 435. Agreement to be in effect from May 1, 1923, to April 30, 1924.

Agreement is same as that previously in effect, summarized in the LABOUR GAZETTE for July, 1922.

Hours per day, eight, and four on Saturdays. Overtime, time and one-half, Sundays and holidays, double time.

Wages per hour: linemen journeymen, 89 cents; troublemen, 91 cents; meter installers and meter repairers, 82 cents; apprentice linemen, 1st year, 61½ cents; 2nd year, 70 cents; 3rd year, 78 cents. Linemen hired to do out of town work, 89 cents, or board and 77 cents. Lamp trimmers, 1st six months, 50 cents; 2nd six months, 60 cents; 2nd year, 70 cents.

MANITOBA. — THE MANITOBA TELEPHONE SYSTEM, AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS Nos. 1037 AND 435. Agreement to be in effect from May 1, 1923, until April 30, 1924, with thirty days' notice of change prior to end of year.

This agreement is similar, with the exception of some minor changes, to that previously in effect, summarized in the LABOUR GAZETTE for September, 1922.

Hours per week on city and exchange work, 44; on provincial construction and maintenance, 48. Shift work, 8 hours per day. Overtime, time and one-half. After midnight, and Sundays and holidays, double time.

All employees after twelve months' service, one week's holiday with pay. After two years, two weeks.

Wages per hour: journeymen (city), cable splicers, 94½ cents; linemen, 89 cents; troublemen, 94 cents; journeymen (province), cable splicers, 79½ cents; linemen, 74 cents, apprentices (inside plant), 35-70 cents; linemen (city outside plant), 60-80 cents; splicers, 60-89 cents; linemen (outside plant, province), 45-62 cents; cable splicer helper, 2nd year apprentice, 70 cents.

### PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1923

THE movement in prices during the month was slight, the average cost of a weekly family budget in terms of retail prices being slightly higher owing to a seasonal advance in the prices of potatoes, while index numbers of wholesale prices calculated by various authorities showed in the main a slight downward tendency. The Department of Labour special index number of fifty commodities and Professor Michell's index were both up somewhat. These increases were mainly due, however, to

seasonal increases in dairy products and potatoes.

The cost of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.53 at the beginning of August as compared with \$10.17 for July; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.92 for June, 1920 (the peak); and \$7.68 for August, 1914. Potatoes showed the only important change accounting for

34c of the advance. Small increases occurred in eggs, dairy butter, cheese, sirloin steak, beans, coffee, and tea, but these were offset by declines in sugar, milk, lard, salt pork, veal, and mutton. Including the cost of fuel and rent with that of foods the budget averaged \$21.03 at the beginning of August as compared with \$20.65 for July: \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.92 for July, 1920 (the peak); and \$14.41 for August, 1914. Fuel showed little change from the July level but was somewhat under the peak of February, 1923. It was, however, slightly higher than a year ago. Rent showed no change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, was slightly lower in August at 153.3 as compared with 153.6 for July; 149.5 for August, 1922; 165.6 for August, 1921; and 256.9 for May, 1920 (the peak).

In the grouping according to chief component material five of the main groups were lower. The largest decline occurred in the Textile group, due largely to a decrease in the price of cotton, while the Wood and Wood Products group, the Iron group, the Non-Ferrous Metals group and the Chemical group each registered smaller decreases. Increases in the prices of grains caused the Vegetable Products group to rise. The Animals group was also up.

In the grouping according to purpose Producers' Goods were again lower while Consumers' Goods advanced slightly. Increases in foods caused the advance in the latter group. The decline in Producers' Goods was caused mainly by decreases in building and construction materials and in materials for the textile, metal-working, and meat packing industries.

In the grouping according to origin, farm products, vegetable, declined

slightly while animal products advanced. Canadian farm products, however, both animal and vegetable, were higher. Articles of marine origin were up slightly, while articles of forest origin were lower, due to decreases in lumber and timber. Articles of mineral origin also declined.

The index number based upon prices of 271 articles in 1890-1899 as 100, published by the Department of Labour since 1910, stood at 222.7 for August as compared with 224.7 for July; 222.8 for August, 1922; 236.4 for August, 1921; 356.6 for May, 1923 (the peak); and 136.3 for August, 1914. The most important declines occurred in cattle, sheep and mutton, sugar, raw cotton, raw silk, jutes and hessians, pig iron, coke, raw rubber, linseed oil, and copper wire. The principal advances were in western grains, hogs, dairy products, potatoes, fresh fish, flax, fibre, bar silver, and coal oil.

The index number published by the Department since 1910 has been reconstructed back to January, 1919, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913 (LABOUR GAZETTE, June, 1923, pp. 689-695). Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in its three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown

monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Department list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 153.0 for August as compared with 151.2 for July: 148.3 for August, 1922; 158.0 for August, 1921; 236.9 for August, 1920; and 102.4 for August, 1914. The increase was due mainly to seasonal increases in the prices of dairy products and potatoes.

The index of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100, declined to 153 for June from 155 in May and 156 in April. In June, 1922, the index stood at 153. All the groups were lower except consumers' goods which advanced slightly.

The Canadian Bank of Commerce index of exports stood at 154.84 for August and 154.77 for July. The index of imports was down from 166.67 for July to 164.46 for August, while the combined index of both imports and exports fell from 160.67 for July to 159.65 for August.

Professor Michell's index of wholesale prices based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, advanced to 178.6 for August as compared with 176.4 for July; 175.7 for August, 1922; 289.0 for August, 1920; and 131.1 for August, 1914. Both foods and manufacturers' goods advanced, the movement in foods being entirely seasonal.

The table of retail prices and rentals shows the prices at the beginning of August of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistic by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA.

Vinegar sold extensively in bottles at higher prices than in bulk.

prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine

staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and

†Five commodities off the market, fruits vegetables etc. One line of spelter was dropped in 1915.

vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and

canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices

Sirloin steak was again slightly higher averaging 30c per pound in August and 29.8c in July. Prices in all provinces averaged higher except Manitoba, Saskatchewan, and British Columbia which were lower. Round steak and shoulder roast showed little change. Veal, roast, averaged slightly lower at 18c per pound but prices averaged higher in Nova Scotia, New Brunswick, and Alberta. Mutton was down somewhat in the average at 28c per pound as compared with 28.3c in July. Fresh pork, roast, was steady while pork, salt, declined slightly averaging 25c per pound in August and 25.2c in July. Bacon showed little change. Boiled ham was up from an average of 59.1c per pound in July to 60.1c in August. In fresh fish cod, halibut, and whitefish were higher. Salt herrings averaged slightly higher but finnan haddie was down somewhat. Lard was steady.

Fresh eggs advanced from 31.2c per dozen in July to 32.4c in August. Increases were general in all provinces. Cooking eggs also showed about the same general advance as fresh from an average of 27.3c per dozen in July to 28.6c in August. Milk advanced in Fredericton and Quebec but declined in Medicine Hat and Nelson. Dairy butter advanced in the average from 34.2c per pound in July to 34.5c in August. Prices averaged higher in all provinces except Nova Scotia, Saskatchewan, and Alberta. Creamery butter was unchanged in the average.

Cheese advanced slightly, averaging 30.3c per pound in August.

No changes were reported in bread. Flour and rolled oats were steady. Rice was practically unchanged. Tapioca averaged slightly higher at 14c per pound as compared with 13.8c in July. Canned vegetables were steady. Onions were down from an average of 8.5c per pound in July to 8.3c in August. New crop potatoes averaged \$2.60 per ninety pounds as compared with \$1.58 for old potatoes in July. Evaporated apples and prunes were steady. Raisins and currants showed little change. Marmalade was up from an average of 79.5c per four pound tin in July to 81.3c in August. Corn syrup declined from 50.3c per five pound tin in July to 49.7c in August. Granulated sugar averaged slightly lower at 12.3c per pound in August as compared with 12.5c in July. Coffee and tea both advanced, the former from 53.8c per pound to 54.3c and the latter from 66.3c per pound to 66.9c. Cocoa was unchanged. Cream of tartar averaged slightly higher at 69c per pound.

Anthracite coal averaged \$17.40 per ton in August as compared with \$17.20 in July. Prices were higher in Three Rivers, St. Catharines, Brantford, London, and St. Thomas. Bituminous coal showed little change averaging \$11.28 per ton in August as compared with \$11.30 in July. Hard wood, four feet long, averaged \$12.80 per cord in August and \$12.83 in July. Very few changes occurred. Soft wood advanced from \$9.43 per cord in July to \$9.54 in August.

Rent was unchanged.

### Wholesale Prices

The following statement as to the changes in the prices of important commodities during August has been issued by the Dominion Bureau of Statistics.

A prominent feature of the prices movement during August was the improvement in grain prices. No. 1 Manitoba Northern wheat was \$1.07 per bushel on August 4th but had risen to \$1.22  $\frac{3}{8}$  by August 25th. The average for the month was \$1.13. Oats, No. 2 C.W., were 42 $\frac{3}{4}$  on August 8th but were 48  $\frac{5}{8}$ c on August 24th, the monthly average being 45 $\frac{1}{4}$ c. This improvement in grain prices is explained by the unfavourable crop conditions which developed in the West during August. Rust, sawfly, cool wet weather, and frost tended to produce less optimistic crop reports both as to quantity and quality, with a consequent bulling of prices. The hog market showed a considerable improvement during August; the smaller supplies marketed after the low level of prices prevailing in July caused a rise in prices. The average for thick, smooth hogs for the month of August was \$10.23 per cwt., as compared with \$8.65 in July. The cattle and sheep market was at times subject to heavy runs during the month which were in a large measure due to drought conditions. The consequence was a falling off in the price of choice steers at Toronto from \$7.60 to \$7.10 per cwt., and of sheep, choice, from \$5.60 to \$5.38 per cwt. Eggs, as is to be expected at this season, showed rising tendencies. The Montreal price of Specials and Extras at the 15th of August being 35c and 40c per dozen as compared with 31c and 36c in July. Butter also revealed an upward sea-

sonal trend, creamery finest being 32½c per pound in Montreal, as compared with 31c in July. Sugar continued its downward movement. The British market was said to be overstocked on account of supplies of Java sugar, some shipments of Cuban raws even being turned back to the United States. A decline in the price of raws resulted, which was reflected in the price of granulated. This latter movement appears to have been accentuated by the competition of American refined sugars shipped into Canada. Raw sugar 96° centrifugal was about \$5.60 per cwt., on August 15th as compared with \$7.15 on July 15th. Granulated declined from \$9.98 to \$9.03 per cwt. The average price of raw cotton, Upland Middling, declined in August to about 25c per pound as compared with 26½c in July. Towards the end of July cotton had slumped considerably but after the beginning of August, owing to unfavourable official crop estimates, adverse weather conditions in some cotton sections, reports of boll-weevil damage, and the small carry-over from the previous crop year in evidence August 1st, the price of cotton began to rise again. The spot price of Upland Middling at New York was about 22½c on August 1st but from the middle of the month onward it ranged around 25¼c to 25½c. The average price was prevented from rising to the level of

the previous month by claims that the official figures were an under estimate, the falling off in demand on account of high prices and the critical conditions in Europe. Reductions in certain lines of cotton goods were in part the result of cheaper raw material. Cotton yarns, 10s, hoisery cops were reduced from 50c to 44c per pound. Increased acreage and favourable crop conditions, giving promise of a good supply, brought raw jute prices from \$7.94 in July to \$6.98 in August. Lack of activity in the market for broad silks had brought about a condition of cautious buying in the raw silk market with the consequence that this commodity declined in value. The price of raw silk, Japanese Filature, Kansai, No. 1, was \$7.10 per pound on August 15th as compared with \$7.80 on July 15th. Metal markets on the whole experienced a quiet month with the result that pig iron basic declined \$1.00 being \$29.00 per ton as compared with \$30.00 in July. Steel rails were \$51.00 as compared with \$52.00. Electrolytic copper fell from \$17.25 per cwt. to \$16.40 and tin ingots from 45c to 44c per pound. One or two lines of wood were easier. Hemlock, No. 1, log run, at Toronto, dropped to \$30.00 from \$35.00 per M., and shingles were \$6.00 as compared with \$6.25 in July. Cedar flooring at Victoria was \$48.00 in August and \$50.00 in July.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

In the countries in Europe in which prices were on the decline during the second quarter of 1923 there are indications of an upward tendency. The latest information available shows this to be the case in Great Britain, Belgium and France. In countries where the latest information is for earlier in the summer, prices were falling; for example, Bulgaria, Czecho-Slovakia, Holland, Italy, Norway, Spain, Sweden and Switzerland, and in Austria both wholesale prices and the cost of living have shown declines. The price rise has continued in Poland and most of all in Germany. In America according to the most recent information, prices in the United States have shown a slight increase, but the same has not been noticed in Canada. Increases in the cost of living are for the most part due to seasonal increases in retail prices of food.

## Great Britain

WHOLESALE PRICES. — The Board of Trade index number (1913=100) fell 2.8 points or 1.8 per cent in July as compared with June, reaching 156.6,

which was 2.3 per cent lower than the level of a year earlier. Foods advanced 1.2 per cent during the month, cereals declining 1.6 per cent and other foods showing an advance of 5.1 per cent owing to the seasonal increase in the price of potatoes. Industrial materials declined 3.4 per cent, all groups showing considerable declines.

The *Statist* index number (in continuation of Sauerbeck's figures) was 124.8 at the end of July, a decrease of 2.4 per cent as compared with the previous month. All groups contributed to the decrease except vegetable foods, in which group English wheat, American maize, English potatoes and Rangoon rice were the commodities to advance.

The *Economist* index number at the end of August showed a slight rise for the first time since April, increasing 0.3 points, or 0.15 per cent, on the level at the end of July. A decline of 1.4 per cent in minerals was offset by an advance of 1.1 per cent in cereals and meat and slight advances in other foods and in textiles.

COST OF LIVING. — The index number of cost of living compiled by the Ministry of Labour, on the base July, 1914=100, was 171 at August 1, an increase of 2 points on the level at the end of June. Foods rose 3 points to 165, fuel and light declined 2½ points to 180 and rent, clothing and sundries showed no change. At the beginning of September the cost of living index num-

ber was 173, foods having risen 3 points to 168 other items showing no change.

## Austria

WHOLESALE PRICES. — The new index number of wholesale prices compiled by Statistische Nachrichten on the base prices in the first half of 1914=1 was 17,376 for June, a decrease of 3 per cent from the level for the previous month. Grains, fodder, milled products, coal and coke showed declines, while beef,

sole-leather and cotton advanced in price.

COST OF LIVING. — The index number of the Paritätische Kommission (July, 1914 = 1) showed a decrease in July, 1923, from the previous month's level for the first time since December, 1922. The total cost of living decreased 5 per cent for the month. Foods, the main item in the budget, decreased 9 per cent, although there was a seasonal increase in the price of potatoes. Cloth-

ing and heating and lighting each increased 2 per cent. Rents remained at the level of the previous month.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry and Labour rose 10 points to 484 in June (April, 1914 = 100). Foods increased 8 per cent, resin products 5 per cent and construction materials, raw rubber and fertilizer 3 per cent. Other groups showed slight variations or no change.

RETAIL PRICES. — The index number for the Kingdom (April, 1914 = 100) rose 10 points to 429 during the month June 15-July 15. This is the highest level reached by the index since February, 1921. The weighted index of 30 foods rose 31 points or 7.4 per cent to 448.

Denmark

COST OF LIVING. — The index number of cost of living published half-yearly by the Department of Statistics on the

base July, 1914 = 100, was 204 in July, 1923, an increase of 6 points or 3 per cent on the level in January. Foods rose 8 points to 188; clothing rose 19 points to 239; rent, 5 points to 160; fuel and lighting, 5 points to 282; and sundries, 3 points to 206. Taxes and dues fell 15 points to 254.

## France

WHOLESALE PRICES.—The index number of the Statistique Générale (1901-10=100) fell from 472.3 (revised

figure) for June to 470.1 for July. All foods declined about one per cent, the only group to show an increase being sugar, coffee and cocoa. All industrial materials declined about 0.1 per cent, owing to a decline of 3 per cent in textiles, the minerals and metals group and the miscellaneous group showing slight advances.

(d) Following month. (e) Middle of month. (f) 230 commodities, 1890-1899; 272, 1910-1914; from 1915, 271. number (38 commodities and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included.

records, prices rising over seven-fold. The Frankfurter Zeitung index number for 98 commodities on the base prices at the middle of 1914=1 rose from 39,898 at July 1 to 286,248 at August 1. Foods increased nearly seven-fold, textiles and leather over seven-fold, minerals nine-fold, the miscellaneous group over six-fold, and industrial products over seven-fold. The dollar exchange during July rose 563 per cent so that gold prices which

were at July 1 almost exactly the same as in 1914 were higher at August 1.

**COST OF LIVING.** — The official index number of cost of living (food, rent, heat, light and clothing) compiled by the Federal Statistical Office, was 37,651 for July (1913-14=1), an increase of nearly 400 per cent on the June level. The largest increases were in food and clothing, which were five times as great in July as in June. Heat and light was

## Holland

WHOLESALE PRICES. — The official index number of wholesale prices in Holland compiled by the Central Bureau of Statistics has been revised and the number of articles reduced from 53 to 48, foods being reduced in number from 33 to 28. The index is now published both on the base 1901-10 = 100 and 1913 = 100. The latter index is the one contained in the accompanying table. In June foods declined one point to 137, and "all articles" showed no change from the previous month.

## India

COST OF LIVING. — The official index number compiled by the Bombay Labour Office showed a rise in July of 2 points, to 153 (July, 1914 = 100). All foods rose 2 points owing to seasonal changes, cereals rising one point, and other foods 5 points, while pulses showed no change. Fuel and lighting, clothing and house rent showed no change.

## United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics showed that wholesale prices in July declined 1 1/3 per cent to 151, being

153 in June, and 155 in July last year. The largest decrease for the month under review was one of 2.5 per cent in cloths and clothing, due to declines in cotton goods and silk. Chemicals and drugs declined 2¼ per cent. In farm products, advances in corn, cattle, hogs, eggs, timothy and clover hay, hops, onions and potatoes were more than offset by declines in wheat, oats, rye, lambs, cotton, beans, alfalfa hay and hides. Metals and metal products, building materials, foods, fuel and lighting materials and miscellaneous commodities showed smaller decreases.

House furnishing goods showed no change.

Bradstreet's index number of wholesale prices was \$12.9143 at September 1 as compared with \$12.8201 at August 1. This was the first upward turn in the index number since March 1, and was an increase of 0.7 per cent for the month. Eight groups showed advances, the chief articles to show increases being meats and other animal products. The live-stock and provisions groups showed increases of 8.2 per cent and 3.2 per cent respectively and smaller increases were shown by breadstuffs,

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of capital towns. (g) 15th of month. (h) Four chief cities. (i) January 1913-December 1920, 22 foods.

textiles, metals, coal and coke, naval stores, and the miscellaneous group. Slight declines were seen in fruits, hides and leather, oils, building materials and chemicals and drugs.

Dun's index number of wholesale prices at September 1, like Bradstreet's, exhibited its first upward trend since early in the year, increasing in the same degree, 0.7 per cent, for the month, to \$187.981. Meats increased 6.3 per cent, dairy and garden products 10 per cent, and clothing 0.5 per cent. Slight decreases were shown by the other four groups.

The index number of the Federal Reserve Board showed for July a decline of 5 points or 3 per cent from the June level. Goods produced fell 4 points; goods imported, 7 points, and goods exported 8 points. Raw materials declined 8 points to 163; producers' goods fell 4 points to 160 and consumers' goods fell 1 point to 156.

**COST OF LIVING.** — The official index number for Massachusetts compiled by the Special Commission on the Necessaries of Life showed an increase for July over the June level of 0.7 per cent, reaching 160.1 on the base average

month up to end of 1920; beginning of month thereafter. (c) Beginning of month. (f) Base is average for six. (k) Cost of food budget.

retail price in 1913 = 100. Foods increased from 140 to 143.4 and fuel from 200.3 to 203.6. Clothing dropped from 184.1 to 182.1, and light from 131.6 to 127.5. Shelter and sundries showed no change, remaining at 167 and 170.5 respectively.

The retail food index of the Bureau of Labour Statistics showed an increase of 2 per cent in July as compared with

June, being 147 in July and 144 in June. The chief change was a seasonal increase of 31 per cent in potatoes. Strictly fresh eggs advanced 5 per cent and pork chops 4 per cent. Cabbage decreased 13 per cent, onions 9 per cent and granulated sugar 5 per cent. Other foods varied less during the month or showed no change. During the year period following July 15, 1922, the increase in all foods was 4 per cent.

## RECENT LEGAL DECISION AFFECTING LABOUR

---

**T**HE legal decision which is summarized below refers to the question of responsibility for injuries sustained by a workman.

**A proprietor is not responsible for injuries sustained by an electrician repairing his elevator**

An electrician who was injured when repairing the elevator in a building brought an action in the Superior Court of Quebec against the proprietor of the building, claiming damages of \$1,940. It appeared that the electrician had been sent by an electrical contractor on the request of the proprietor. After examining the mechanism he instructed the proprietor's engineer to rotate the motor by hand. To do this the engineer fixed a pipe wrench on the shaft of the motor. When the power was turned on later, on the electrician's instructions,

this wrench which had been left on the shaft flew off and struck him. The action was dismissed by the Superior Court on the grounds that under the circumstances the electrician was in charge of the work of repairing the elevator, and was responsible to see that due care was taken in its execution, and that he was himself to blame for what had happened by reason of the fact that he had not taken such care as to prevent the accident.

# THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—H. H. WARD.

Volume 23

OCTOBER 1923

Number 10

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

IN addition to the regular monthly articles this issue of the LABOUR GAZETTE contains an account of the Federal-Provincial Conference which met at Ottawa to consider the obligations arising out of the labour sections of the Peace Treaties; articles on legislation in Canada bearing on proposals of the International Labour Conference, and on hours of labour in Canada and other countries; and a report of the annual meeting of the Trades and Labour Congress of Canada, as well as reports of annual meeting of various other labour organizations. There is also given the text of a judgment recently delivered by Mr. Justice Orde respecting the validity of the Industrial Disputes Investigation Act, 1907.

### Monthly summary.

The offices of the Employment Service of Canada reported a further increase in employment during August largely owing to harvesting in the prairie provinces. There was also a great increase in the number of applications, vacancies and placements during August as compared with the same month last year.

At the beginning of September, the percentage of unemployment among members of trade unions was 2.2 as compared with 2.9 at the beginning of August and with 3.6 at the beginning of September, 1922.

The average cost of a weekly family budget of twenty-nine staple foods was

\$10.46 at the beginning of September, as compared with \$10.53 for August; \$10.28 for September, 1922; \$11.82 for September, 1921; \$16.92 for June, 1920 (the highest point reached), and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, stood at 154.7 for September, as compared with 153.3 for August; 145.4 for September, 1922, and 256.9 for May, 1920 (the peak).

The time loss due to industrial disputes during September was less than in the previous month and than in September, 1922. Seventeen disputes began or were in progress during the month, involving 1,844 employees and a time loss estimated at 35,237 working days. Corresponding figures for the previous month were 18 disputes involving 3,655 employees and a time loss of 37,257 working days, and for September, 1922, 23 disputes involving 17,736 employees and a time loss of 99,732 working days. At the end of September there were 13 disputes in progress involving 978 employees.

### Proceedings under the Industrial Disputes Investigation Act.

Two reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in September, and one Board was established.

**Increased demand for Government Annuities.**

That there is increasing interest throughout Canada in the Dominion Government annuities plan is definitely indicated by the large increase in applications for this form of protective investment made to the Government Annuities Branch of the Department of Labour. During the first six months of the present fiscal year which began on April 1, the amount of money invested has been over \$567,000, which is an increase of \$125,000 in excess of the value of the annuities issued in the same period last year. The Act establishing the Branch was passed in 1908, but in the first few years of operation the business done was not extensive. In the past 10 years, however, it has grown steadily. A particularly striking augmentation of annuities written has been evidenced since the Annuities Branch came under the operation of the Department of Labour. Judged by the actual number of applications received this year and the increasing number of inquiries to the Department, it is probable that the amount of business written in 1923 will be considerably in excess of last year's total, which represented an investment of over a million dollars.

Various plans of annuities are operated. The most popular, gauged by the number of applications received, is that which gives a life income to the annuitant for the payment of a stated capital sum. He or she will be paid a sum for life equivalent at or beyond the age of 55 years to about eight per cent of the amount invested. The rate of interest increases according to the length of the period of survival until at the age of 85 the rate is nearly 27 per cent. The next most popular plan is the deferred annuity system, which as its name implies, becomes effective at the end of a given number of years. This form is particularly appropriate for those who wish to make provision for their old age whilst still in active employment. The cost depends on the age of the annuitant

and the period for which the annuity is to be deferred.

**Commission to enquire into industrial unrest at Sydney, N.S.**

On September 22, an order-in-council was passed appointing a Royal Commission under the Inquiries Act to make an inquiry into the cause of industrial unrest among the steel workers at Sydney, N.S., and the circumstances which occasioned the calling out and the retention of the Militia in aid of the civil power in connection with the same. The Commission is composed of Dr. James W. Robertson, C.M.G. of Ottawa, chairman, and Messrs. J. J. Johnson, K.C., Charlottetown, P.E.I., and Fred Baneroff, Toronto. The Commission is empowered to make all necessary enquiries and investigation concerning the relations between the employers and employees concerned with a view to making such recommendations as in their opinion may serve to promote amicable relations between the parties and remove or lessen the unrest. They are also empowered to treat as private any testimony, books, papers documents or statements given or exhibited to them.

**Mine rescue work in Canada.**

The annual mine rescue and first-aid competition of the East Kootenay Mine Safety Association was held at Michel, B.C., on August 25, and those of the Vancouver Island Mine Safety Association and of the Province of Alberta on Labour Day, September 3, the former being held at Ladysmith, B.C. and the latter at Edmonton, Alta.

Seven mine rescue and ten first-aid teams took part in the East Kootenay Mine Rescue Association competition, two of the mine rescue and three of the first-aid teams coming in from Alberta. There were four separate contests, mine rescue, senior and junior first aid, and ladies' first-aid. Three of the mine rescue teams representing the Coal Creek Colliery of British Columbia

used the Gibb rescue apparatus, two representing the Michel Colliery used the Draegar apparatus, and the Alberta teams, one from Lethbridge and one from Bellevue, used the Proto rescue type. The winner of the first prize for mine rescue work was a Coal Creek team under Captain J. Caulfield. This team also received a trophy donated by the Honourable J. H. King, Minister of Public Works in the Federal Government, for efficiency in mine rescue training. The preparation of the grounds was under the direction of Mr. F. Herney, Mine Safety Inspector at Michel. A Fernie first-aid team in addition to receiving the first prize for first-aid work was presented with the British Columbia Mine Department Cup for efficiency in first-aid.

At the competition under the auspices of the Vancouver Island Mine Safety Association teams were in attendance from the most important of the coal mining centres of the province including Cumberland, Ladysmith, Nanaimo, Cassidy, South Wellington and Fernie. The Paul apparatus and the Gibbs apparatus were used in these competitions. The Honourable William Sloan, Minister of Mines, Mr. Geo. Wilkinson, Chief Inspector of Mines, and Mr. Thomas Graham, General Manager of the Canadian Collieries (D) Limited, were among those who attended the meet. The Cumberland team came first in the mine rescue work, the Fernie team came second, and Nanaimo third. In the first-aid work Captain Beveridge's team, Cumberland, was the winner of the Coulson cup, and Mrs. Hudson, of Cumberland, was captain of the winning team for the Ladies' Cup. In this competition there was also the "One Man Event", "Two Men Event" and "Juvenile Event", the winners in these events representing the districts of Nanaimo, Cassidy and Nanaimo respectively.

The competition in Alberta was held under the joint auspices of the Canadian Institute of Mining and Metallurgy and the Workmen's Compensation

Board. Eight teams were entered for the mine rescue competition. The Humblerstone team carried off the Canadian Institute of Mining and Metallurgy challenge shield awarded in the northern section of the province, winning out in competition with five other teams, with an aggregate of 671 marks, 750 marks being the maximum. It was, however, three points behind the Hy-Grade team from Drumheller, which latter team therefore become Alberta champions for 1923. The rescue contests were staged in a specially built tunnel framework at the Exhibition grounds, and it is stated they will now be given a permanent home there. Two mine rescue cars supplied the equipment for the various tests. For the "Gorman Challenge Cup" offered for competition in men's senior first-aid, there were four entries, and the Blue Diamond team was the winner with 251½ marks. In the ladies' contest Beverly "B" team got 254½ marks out of a possible 300, Beverly "A" team got 235½ marks while a girls' team entered in the contest won 186 marks. Among the junior class competitors, all were Edmonton boys, the winners being Third Troop Boy Scouts with 262 marks. Five silver and five bronze medals were awarded in this class.

The "Mecco" type of rescue breathing apparatus was selected as the most suitable for the Nova Scotia collieries, at a recent meeting at Cape Breton. It was, however, openly admitted that each type of apparatus had its own advantages which under different conditions might make it commendable. The "Mecco" is of British design, and like all other types is being constantly improved. All the colliery districts of Nova Scotia will be equipped with the same type, enabling the rescue corps of one district to render effective aid in any other district should an accident occur necessitating outside help. The subject of standardization of mine rescue apparatus has lately been receiving the attention of mine officials both in Canada and the United States.

**Report on  
safety in  
bituminous  
coal  
mines.**

The United States Coal Commission has issued a summary report of its investigation of Safety in Bituminous Coal Mining.

The report states that the principal bituminous coal mine hazards are first, falls of roof and coal; second, underground transportation; third, explosions. There was no positive evidence to show that bituminous miners were subject to special and marked occupational diseases. The occupation was considered, however, more hazardous than the average occupation; using the comparative occupational rates of Ohio and Pennsylvania as a basis, ten per cent of all occupations listed take a higher rate than bituminous coal mining, and ninety per cent a lower rate. State mining laws and compensation insurance inspection were claimed to be the two great factors for mine safety. Competitive insurance under State control, as in Pennsylvania, with schedule and experience rating to evaluate individual mine hazards appeared to give the best results from a safety view point. While the majority of the committee felt that certification of miners was sound in theory and, if properly conducted, an aid to safety, the operators' representative held that in practice this law had given control of all miners to the Union, and where in effect had not reduced accidents. Inability to read and understand printed and written instructions and lack of sufficient knowledge of English to understand even the spoken language was claimed to be among the indirect causes of accidents, and it was stated that insistence on ability at least to understand spoken English should be made a condition of employment in so dangerous an industry as coal mining, or the employee should work under the direction of a foreman who understands his language. The Commission believed in the idea of having a safety committee of men at each mine. Unification of basic points in the various State laws, it was claimed, would increase safety and do

away with unfair conditions that create competition based on the difference in the cost of mining under the different safety standards in neighbouring States. It was recommended that all States should have safety service organizations in connection with compensation insurance, and that the Bureau of Mines should conduct more safety service inspection work in the mines as an accident-prevention measure, and their reports should be furnished to the state departments of mines as well as to the operators.

**Workmen's  
Compensation  
Commission  
appointed  
in Quebec.**

Early in the present month the Government of the Province of Quebec, in fulfilment of the requirements of an act passed at the last session of the legislature, created a commission to inquire into the labour conditions in the Province with special reference to Workmen's Compensation. The Act (Statutes of Quebec, second session, 1922, chapter 38) provided that "the Lieutenant Governor in Council may create a commission composed of five persons, chosen by him, of whom one representing the government presides *ex officio*, two representing the employers and two representing the labourers, to inquire into the labour conditions in this Province, with regard to the system or systems it would be expedient to establish in order to fix and determine indemnities or compensation in cases of accidents to workmen in the course of or occasioned by their work" (LABOUR GAZETTE, March 1923, page 265). The Commission will be composed as follows:

Chairman: Ernest Roy, K.C., of Quebec.

Representing the employers: Joseph Alexandre Bothwell, manager of the Brompton Pulp Company, East Angus; and E. Gaudiose Brousseau, president of the Builders' Exchange, Quebec.

Representing the employees: Gustave Francq, of Montreal (for the International Unions), and Pierre Beaulé, of Quebec (for the National Unions).

Secretary, Alfred Crowe.

The Workmen's Compensation Act of Quebec, enacted in 1909, and amended subsequently, instituted the existing system under which workmen injured in the course of their employment may obtain compensation from their individual employers by means of actions in the civil courts or through private insurance companies. Starting in 1914, other provinces in Canada established "state" systems of workmen's compensation, the employers in each group of industries being collectively liable for the payment of compensation for industrial accidents to employees, the claims of the workmen being adjudicated by special boards appointed by the several provincial governments. In recent years many labour delegations have waited on the government of Quebec to ask that a Workmen's Compensation Board should be created on the plan which is in effect in the other provinces. It is understood that the Commission will begin its sessions at the end of October.

#### Minimum wages in Alberta.

His Honour Judge A. A. Carpenter, chairman of the Alberta Utilities Commission, has been appointed chairman of the Minimum Wage Board of the same province, in succession to Mr. A. G. Browning, whose resignation from that position was noted in the LABOUR GAZETTE for August. The other members of the Board continue to serve, namely Mrs. Harriet J. Ingram, of the Garment Workers' Union, Edmonton, employees' representative, and Mr. James Kellas, secretary of the Retail Merchants' Association, employers' representative.

#### Yukon Territory ordinances of 1923.

The ordinances passed by the Yukon Council during the present year comprise no enactments having special reference to the employment of labour, with the exception of a redrafted subsection of the Yukon Game Ordinance declaring it to be an offence to act as

guide or assistant guide without a license. The subsection provides that "any person who acts as guide or camp helper to any non-resident hunter without first having procured a license as required by this Ordinance shall be guilty of an offence against this Ordinance. No Indian shall act as assistant guide or camp helper without having first procured a license to so act, and any Indian so acting without license shall be guilty of an offence against this Ordinance". It is also provided that no Indian shall be licensed as a chief guide.

#### Fire prevention week.

By proclamation dated September 18, the week from October 7 to 13 was appointed by the Governor General to be observed through Canada as "Fire Prevention Week". The proclamation states that during the last ten years more than 4,000 persons in Canada lost their lives and insurable property having a value in excess of \$300,000,000 was destroyed by fire. During 1922 the loss from this cause reached the unprecedented total of \$54,390,600, and the losses are stated to be rapidly increasing despite the praiseworthy efforts of numerous agencies for its prevention. It was further stated in the proclamation that at least 90 per cent of the fires are due to inexcusable ignorance or neglect, and that the exercise of reasonable prudence and proper carefulness on the part of individuals would reduce losses by fire in Canada to the comparatively insignificant proportions of losses in other countries. The public were asked to take special measures during the week, including the careful inspection of private and public dwellings, stores, warehouses, factories, hotels, hospitals and other institutions; the removal of rubbish from the neighbourhood of building; fire drills and instruction for school children and others; instruction of persons entering the park and forest areas, and full publicity for all laws and regulations on the subject of fire protection.

**Technical  
training  
in pulp  
and paper  
industry.**

Mr. J. N. Stephenson, editor of the *Pulp and Paper Magazine*, published at Ste. Anne de Bellevue, Quebec, has been appointed principal of the technical school for the pulp and paper industry which was recently established at the same place by the Institute of Industrial and Domestic Arts. Some account of the special courses and text books offered to students of this industry was given in the LABOUR GAZETTE for June, 1923, page 577. The faculty of the school consists of well known experts in paper manufacture and technology. Six of the faculty are superintendents of mills, three are managers, two are chief chemists, three are engineers, three are consulting technologists and others are specialists in other departments. A committee of executives in the industry supervises the school. After ten months' operation the number of students is now 350, representing over sixty occupations, from general manager to labourer, the age of the students ranging from 18 to 60 years.

**Teaching  
councils  
for hospital  
nurses.**

Revised regulations governing hospitals in Saskatchewan, issued during September, make provision for the technical training of nurses in every hospital which receives aid from the Provincial Government. A training school must be maintained capable of providing a complete course in nursing, and a teaching council is to be established, composed of a nominee of the medical staff on the hospital board, the principal of a local educational institution to be named by the Board, the hospital superintendent, the superintendent of nurses, and such staff nurses as are engaged in teaching, together with such members of the medical staff as are appointed teachers by the board of governors upon the recommendation of the medical staff. Teaching councils are to elect their officers at their first meeting in each year. There is also to be an executive committee composed of various officials of the hospital and of the teaching council. The duties of the teaching council are, to decide upon a curriculum for the training school; arrange for keeping a complete record of all pupil nurses; arrange for examination in theoretical work; prepare reports of examinations; make recommendations to the board of governors for the issuing of diplomas, and make rules for the conduct of the school. Such rules are subject to approval of the board of governors. The course of studies outlined by the council must have the approval of the Minister of Public Health of the Province.

**Industrial  
training of  
mental  
defectives.**

Mention was made in the August issue of the LABOUR GAZETTE of the success reached at the Ontario Hospital, Orillia, in teaching mental defectives useful occupations. Commencing October 1922, the patients of the Mental Hospital, Weyburn, Saskatchewan, have been taking lessons in rug weaving, needlework of many sorts, tapestry and basket weaving, and toy making. A collection of samples of their handiwork was shown at the recent Exhibition at Regina which called forth expressions of amazement that the mentally ill can be persuaded to bend their minds toward learning to make articles of such perfection. Mrs. E. Pirt, the teacher of occupational therapy in this hospital, states that the making of these articles is an important factor in coaxing the deranged minds back to a natural condition and for that reason the hospital staff endeavours to find sale for them. The money from the articles sold is used in buying comforts for the patients. There was also an exhibit from the Battleford Hospital which was chiefly remarkable for the very beautiful hammered copper and brass, and the woodwork, and the extraordinary display of appliqué embroidery and needlework.

**Conditions  
in British  
Civil Service,  
Army and  
Navy.**

In March last, the British Government appointed a committee under the chairmanship of Sir Alan Garrett Anderson, K.B.E., "to enquire into the present standard of remuneration and other conditions of employment of the various classes of State servants employed in the Civil Service and in the three Fighting Services" and to include in their report a classified statement of increase in the number and cost of personnel in these services consequent on duties imposed on them since July 1914, and the expansion of duties then existing. A summary of the findings of the committee is given in *The Ministry of Labour Gazette* for September, 1923. The committee express the view that "there is only one principle in which all the factors of responsibility, cost of living, marriage, children, social position, etc., are included—the employer should pay what is necessary to recruit and retain an efficient staff". They advise two general considerations in regard to the pay of State servants; (1) that the State should hold the scales even between its own servants and those through whose enterprise its servants are paid; (2) that employees of the Crown would have a real ground for complaint if their pay were related to wages in industry only in the time of low wages. It was the opinion of the Committee: "If they do not get pay relative to the boom, they must be spared the full severity of the slump. The State as a model employer offers security, a pension, a dignified service, and moderate wage, in exchange for the excitement and possibilities of private employment". The committee found that in the competitive trades or industries subject to world competition (cotton, coal mining, iron and steel, mercantile marine and agriculture) the level of wages showed a reduction ranging from 10 per cent to 40 per cent, on the amounts paid in 1919; while in the sheltered trades, the trades not exposed to world competition (bricklayers, dock labourers, gas stokers, and labour-

ers employed in the non-trading services of local authorities) the reduction is only from 5 to 15 per cent. The increase in staff in the civil service generally was accounted for by the extra work which had been thrown on the Civil Service since 1914, it being found that the average individual output is not less than in 1914. Among the recommendations of the Committee were: that the Government should limit as much as possible the number of Ministries which have to interfere with each industry, in view of the indirect, as well as the direct, burdens of inspections upon industry; that for the routine clerical classes the normal attendance should be eight hours, with three-quarters of an hour off for lunch; that the Post Office should consider whether such high maximum rates as are now paid (to postmen and other "manipulative" grades) are necessary; and that young women should be recruited for administrative, executive and clerical grades at a lower rate than young men; a woman's value being regarded as lower owing to the prospect of marriage, and the consequent doubt whether the woman will be able to give continuity of employment. With regard to the Fighting Services, the Committee favoured a scheme for a reduction in pay for the non-commissioned officers and men of the army. They considered that the pay of naval ratings was now too high, and should be reduced parallel with reduction in the pay of the rank and file of the army. They also suggested certain reductions in the pay of junior officers in the Army and the Navy, and the junior officers and men in the Air Force, but they were not in favour of reductions for the higher officers in the Army and Navy.

**Labour  
turnover  
and  
industrial  
accidents.**

A close relationship between the number of new employees and the number of industrial accidents is shown as the result of a survey of the records of about 30,000 accidents

in various kinds of industry in the United States. The survey is described in the July issue of the *Journal of Industrial Hygiene*, the organ of the American Association of Industrial Physicians and Surgeons. Its conclusions support those which were reached a year ago by an observer of the accident records of the United States iron and steel industry during a ten-year period, and published in Bulletin 298, of the United States Bureau of Labour Statistics, 1922. In the latter publication it was stated that the accident rate for employees with less than six months' service was 37.1 per million hours exposure to risk, compared with 14.1 for those with 3 to 5 years' service, and with 2.8 per cent for those with 10 to 15 years' service. The new survey proves that while the fluctuations in accidents follow to a slight degree the fluctuations in average working force, they follow with a far closer correspondence the fluctuations in the number of new employees. A study of data supplied by four large industrial concerns covering the year 1921 shows that the number of accidents was approximately equal to the number of new men hired. It is found, further, that the number of accidents varies somewhat from month to month, and that the number of new employees varies likewise, this correspondence being observed both for the total figures and for the separate establishments. No factors considered by investigators of industrial accident records have been found to bear so close a correlation. In view of these conclusions the practical steps suggested by the writers for the reduction of industrial accidents are: first, to reduce labour turnover for if the number of new employees could be reduced to zero the number of accidents would probably be reduced by 75 per cent; second, in calculating the cost of turnover, a percentage of compensation expenses should be included with the cost of spoiled work, damaged machinery, etc.; third, more instruction should be given to new employees.

#### Experiment in unemployment insurance.

Reference was made in the last issue of the LABOUR GAZETTE (page 978) to the Unemployment Insurance bill which is being considered by the Wisconsin State Legislature at its fall session. Professor John R. Commons is said to be responsible for the drafting of many of the provisions of the "Huber Bill", as it is called. The bill is framed upon the principle that unemployment is a disease of industry and that the burden of responsibility for unemployment should be placed upon the managers of industry rather than upon the community or upon labour. The bill provides that all employers in Wisconsin with a few exceptions, shall form themselves into a statewide mutual insurance company and pay premiums in proportion to the regularity with which each keeps his labour force working. The employer who hires and fires indiscriminately will pay a high premium. The employer who exhausts all means at his command to keep his normal force working on full time will have his reward in the smaller premium assessed against him. Thus there will be a steady incentive to keep continuous the employment of all labour, regardless of whether any individual employer is out of sympathy with the plan or not. In spite of all these efforts, industry is bound to suffer some seasonal and periodic dislocation from which a certain amount of unemployment will be the result. To take care of these unemployed the state insurance company will pay benefits at the rate of \$1 a day for adult men and women and 50 cents a day for boys and girls between 16 and 18 years. The unemployed, provided they have worked six months for one or more employers, will be entitled to benefits for a maximum period of six weeks, with the limit increased to thirteen weeks after the third year. Workers idle as the result of a strike or lockout are not entitled to benefits. The Huber bill does not apply to employers who hire less than six workmen, or to farm labourers or employees of the State or of

cities, towns, villages or school districts. No new commissions or state machinery is called for in the bill since administration is provided for through the State Industrial Commission with the co-operation of an unpaid advisory board of employers and employees.

The Huber bill is being watched with interest in the United States. The *New York Times* observes that "if it proves half as efficacious in reducing unemployment as compensation laws have been in reducing the number and severity of accidents, it will have amply earned its right to live".

**Employment  
guarantee of  
Proctor and  
Gamble  
Company.**

A guarantee of regular employment has been issued by the Proctor and Gamble Company. Company, soap manufacturers, to its employees at Ivorydale, Ohio, who participate in the Company's profit-sharing plan. The guarantee secures to each profit-sharing employee full pay for forty-eight weeks of the calendar year less any time lost by reason of the customary holiday closings, or through fire, flood, strike, or other extreme emergency. If an employee enters the profit-sharing plan after the beginning of the year it is the intent of the company to secure him full pay for such of the forty-eight weeks as remain in that calendar year. The company reserves the right to transfer any employee to work other than that at which he is regularly employed at the same regular wage rate per hour, the right to discharge any employee at any time and for any cause, and the right to terminate or modify this guarantee after serving six months' notice to that effect.

**Employees'  
benefit plan  
to stabilize  
employment.**

An employees' benefit plan which has been in successful operation since January 1, 1919, in the Hood Rubber Company's establishment at Boston, Mass., is described in an article in the September issue of the *American Management Review*. Three classes of bene-

fit are provided, sickness, non-industrial accident and death. Industrial accidents, being covered by Workmen's Compensation, are not included. All factory employees of three months standing or more are eligible for benefits, but the amount paid, and the number of payments made, increase with the length of employment. Thus, employees who have served three months to one year receive \$8 a week for seven weeks; those who have served one to three years receive \$9 a week for 13 weeks; from three to five years \$10 for 26 weeks; from 5 to 15 years \$12 for 39 weeks, and 15 years and over \$12 for 52 weeks. In cases of death the dependants of deceased employees who had served from three to six months receive \$200, from six months to one year, \$300, increasing by regular increments until \$1,000 is paid on the death of employees of five years' service or more. Experience is said to have shown that the death benefits are the weak features of the scheme, the direct returns not being commensurate with the expenditure. The schedule of benefits above enumerated is based on continued or unbroken service without reference to earnings. A waiting period of seven days provides against malingering in short time disabilities.

The factory employs about 7,000 workers, of whom about 35 per cent are female, about 50 per cent are foreign born, and about 50 per cent are married. The effect of the plan has been, it is stated, a reduction of unnecessary absenteeism. "During the last several years our total time loss has been about 5 per cent working time, of which about two-thirds was due to personal reasons, and one-third to sickness and accident. Except during periods of unusual epidemics the time lost for sickness does not exceed six days a year per employee. Women lost about twice as much time from both personal and sickness absence as men. These rates appear very favourable in comparison with those of any other group of industrial employees under similar conditions of employ-

ment, and composed of a similar personnel as regards sex distribution." The company assumes full financial responsibility and deals directly with its employees. "We expend a considerable amount of money annually in the payment of benefits. We do this because we believe that we thereby improve the employment relationship and attract and hold a more desirable personnel."

**The co-operative movement in Denmark.**

An article on The Co-operative Movement in Denmark, contributed by Mr. F. Dalgaard, secretary of the "Ko-operative Foellesforbund" of Denmark appeared in a recent issue of "*Industrial and Labour Information*" published by the International Labour Office (League of Nations). The writer states that the co-operative movement among the workers and poorer classes has not been so important in Denmark as in Great Britain and Germany but agricultural cooperation has had consequences of the greatest importance. Out of a total population in 1911 of 2,700,000, about 1,000,000 derived their living directly or indirectly from agriculture. Since the forming of the first co-operative dairy in 1882 that movement has developed so greatly that in 1909 out of a total of 180,000 farms and estates that had milch cows, 100,000 which owned 1,174,000 cows out of a total of 1,272,000, delivered all their milk to co-operative societies, so that only about 8 per cent of the farms were outside of the co-operative movement. In 1921, the total turnover of all Danish agricultural societies was 1,248,000,000 kr. of which 535,000,000 represented the turnover of the dairies, 330,000,000 kr. that of the slaughter houses and 174,000,000 that of the wholesale society. In the whole country there are about 1,800 co-operative distributive societies founded with Rochdale principles. In 1886 the first Workers' Co-operative Bakery was founded at Copenhagen.

There is now a workers' bakery in all the larger Danish towns. Of these 35 have formed a federation for the purchase of wheat and they have also their own mill. It was only about the beginning of this century that consumers' co-operative societies came to be generally established in the towns although the first one was established in 1866, and a second one which still exists was founded in 1872. The Metropolitan Consumers' Society, an amalgamation of sixteen societies has now 30,000 members and more than 100 distributive departments. This Society has formed a federation of workers' societies which have a yearly turnover of 30,000,000 kr. Another form of co-operation is found in the building societies, which have built, altogether about 7,000 dwellings. The Workers' Cooperative Bank of Denmark, which was founded in 1919 to take charge of the finances of Danish workers, has an annual turnover of about 400,000,000 kr. Last year all the workers co-operative societies in Denmark united to form a Danish Co-operative union, its function being to promote the co-operative movement, to remove causes of friction and overlapping and to act as a link between the Danish movement and foreign co-operative organizations.

An effort is being made in Manitoba to have prison labour utilized in connection with certain non-competitive industries, that is, industries, which are not carried on in the province. Among these industries the manufacture of binder twine and automobile license plates is mentioned. Many men serving terms are said to have no regular occupation in the Provincial gaol, and on their discharge are practically without resources. Short term prisoners are given a chance to go on the prison farm, where they earn 25 cents a day, but long term convicts are not trusted to that extent.

Sixty-six miners and employees of the Cedar Creek Mining Company, of Bri-

tish Columbia, succeeded in an application made before Judge Williams at Williams Lake, B.C., in September, for the establishment of mechanics' liens against the company's gold mine at Cedar Creek to the amount of \$18,000. The claims were for wages to April 30 last, including amounts which were due for several months previous to that date. The lien holders may sell the mine after ninety days in order to realize the amount involved in the judgment.

The Granby Consolidated Smelting and Refining Company of Anyox, B.C., recently offered a prize of \$50 for the best essay or scheme submitted by their employees on "What we should do to protect our property from fire." Out of thirty-four essays and schemes, the Company selected an essay submitted jointly by Messrs. W. J. Reeves and Thomas Allan and it was published as a supplement to the September 8 issue of *The Granby News*. It is stated that undoubtedly some of the suggestions contained in these schemes will be embodied in any scheme to be put into effect providing for the future safety of Anyox and its people.

Members of the Workmen's Compensation Boards of the various provinces met in annual conference during September at Halifax, N.S. The Boards of Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia and Ontario were represented at the conference. Mr. V. J. Paton, K.C., chairman of the Nova Scotia board was elected president of the organization for the ensuing year; Mr. H. G. Wilson, chairman of the Manitoba board was elected first vice-president, and Mr. F. W. Armstrong of the Nova Scotia board, secretary-treasurer. The next meeting will be held in Winnipeg in September, 1924.

At the thirty-fourth annual convention of the Canadian Association of Stationary Engineers which was held in Toronto, Ont., in June last, a resolution

was adopted requesting that pressure be brought to bear on the Stationary Engineers' Board, to secure better enforcement of the Stationary and Hoisting Engineers' Act, by the appointment of inspectors, who are not to be members of the Board. It was also decided that all motions or resolutions covering infractions of the Act should be dealt with by the new executive. It was decided to hold the next convention in Montreal. Mr. J. J. Sullivan of Ottawa was elected Grand Lodge president; Mr. R. McLaren of Toronto, vice-president; Mr. H. E. J. Groom of Kingston, treasurer; and Mr. George J. Soucy of Toronto, secretary.

Messrs. Austin and Nicholson, Limited, of Chapleau, Ont. who have lumber mills at Dalton, Nicholson and Devon, recently erected a number of four roomed cottages and storey and a half houses containing six rooms for their married employees. A 100-roomed sleeping or lodging house has also been constructed by the firm, which contains in addition to the one hundred bedrooms, smoking or rest rooms, writing and reading rooms, a barber shop, wash room and lavatory. Each bedroom is equipped with one two-deck unit steel camp bed with spring and mattress and necessary bedclothes, a table and bench. The houses are erected so as to provide a baseball diamond for the use of the employees.

It is announced that the University of Toronto has consented, at the request of the Department of Trade and Commerce, to hold a second Extension Course in Export Trade, which will begin in the latter part of January, 1924. It is stated that this course will more or less follow the lines of the first one which was held last January, mention of which was made in the issue of the LABOUR GAZETTE for December, 1922, although some changes will be made in the practical part of the course, and there will be lectures in public speaking. The course is fully endorsed by the Canadian Manufacturers' Association.

Orders recently issued by the President of the Federal Department of Labour, Germany, require that public employment exchanges must make systematic arrangements for the vocational guidance of young persons and for supplying the public with information on vocational questions; must supply vocational advice and information to anyone who requires it; and must find positions for apprentices and learners which are satisfactory from the vocational, moral and health point of view. The head of each such exchange is charged also with the duty of supervising all private employment exchanges in the locality and must inspect them at least twice a year without previous notice.

It is announced that the Government of India has again taken up the question of the advisability of prohibiting the employment of women in mines. The Department of Industries and Labour of the central governments has sent a letter to each of the provincial governments, asking for advice with regard to possible legislation against the employment of women in mines. At present about one-third of the mine workers in India are women.

The United States Department of the Interior is testing the use of air planes as aids in mine rescue work. At the testing station in Alabama planes are equipped with oxygen breathing apparatus and held in readiness for flights to mining towns within reasonable range. The air service will supplement the railway cars and automobile trucks already used for mine-rescue work, and will be of special service for more remote camps.

Experiments with radio telephony in the work of colliery rescue parties are being conducted at the Ashington Colliery in England. As the rescuers carry out their duties, constant communication is kept up with those directing operations from the base. Experiments have already been carried out to depths of 300 yards, and it is expected to test reception at depths of 1,000 yards.

In an effort to stimulate an interest in the study of economics, Mr. Alvan T. Simonds, president of the Simonds Saw and Steel Company of Fitchburg, Mass., has offered prizes, during the past two years, of \$1,000 and \$500 for the best two essays on a given subject. The subject of the essay for 1923 was "The Lack of Economic Intelligence." The contest was open to students in the high schools, trade schools, and normal schools throughout Canada and the United States. Both prizes were won by pupils of the Commercial High Schools in Brooklyn, N.Y., who have recently graduated from the schools. The winner of the first prize was 18 years old, and of the second, 17 years.

On September 7 last, an alliance of workers in the needle trades was effected at a conference in New York, N.Y., which was held by representatives of the five principal international unions of the needle industry. This is the culmination of a movement launched over two years ago. The five unions forming the alliance are: The International Ladies' Garment Workers' Union, The Amalgamated Clothing Workers of America, United Cloth Hat and Cap Makers, The International Fur Workers Union, and the Journeymen Tailors' Union.

A scheme for the establishment of an entertainments federation has been accepted by the British Actors' Association. The Musicians' Union and the National Association of Theatrical Employees will also be members of the proposed federation. It is intended to form a federal executive of 15 members with equal representation for each of the three societies. All questions of wages and working conditions are to be dealt with through the federation, and the constitution provides for joint action if any one of the three bodies is attacked.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation, Strikes, Prices.

#### The Labour Situation

THE volume of employment at the beginning of September as indicated by firms reporting to the Dominion Bureau of Statistics, showed a very slightly downward movement as compared with the month before, but conditions continued to be much more favourable than at the same period of last year. At the beginning of September the percentage of unemployment among the members of trade unions was 2.2 per cent as compared with 2.9 per cent at the beginning of August and with 3.6 per cent at the beginning of September, 1922.

A further increase in employment was reported by the offices of the Employment Service of Canada during August, the gain largely on account of harvesting activities in the prairie provinces. Applications, vacancies, and placements, exceeded greatly the number reported during the same period a year ago.

The following is a brief summary of employment conditions, as reported at the end of September, 1923, by the superintendents of the offices of the Employment Service of Canada.

In the Maritime provinces a slight decline was noticeable in the demand for construction workers, due to the completion of several road jobs. Numerous labourers, carpenters, painters, plasterers and concrete workers, were called for and placed without difficulty from the majority of the offices. Some sewer construction and street paving was underway in one or two localities. The offices at Chatham, Moncton, Amherst and New Glasgow, reported a number of vacancies offered for woodsmen, sawyers and choppers for the lumber camps.

In the province of Quebec a slight decrease was reported in the demand

for agricultural workers. The building industry was very active, with requirements for bricklayers, plasterers, stone-masons and building labourers at all the offices. The summer programme of work on highways and roads was nearing completion with a consequent falling off in the demand for this class of labour. Difficulty was experienced in filling all orders for workers in the lumbering and logging industries, the demand being felt chiefly at Quebec, Hull and Montreal. A keen demand was felt for household workers, with a number of orders unfilled for cooks, general servants and waitresses, but experienced applicants were hard to secure.

In Ontario general farm labour was still in great demand, with calls for peach and apple pickers for the districts near St. Catharines, Niagara Falls and Toronto. Construction work was very active and labourers were readily placed on highway work, railway maintenance, dam and power house and transmission line construction work. Vacancies were available in considerable numbers for masons, bricklayers, carpenters and interior finishers. Many sawyers, tiemakers and general bushmen, were in demand at the northern offices. The mining group was active, with a fair demand for miners and labourers. In the manufacturing industries vacancies were reported at Kingston for woollen weavers, and at Oshawa, Toronto and Hamilton, orders were received for colour varnishers, diemakers, moulders and metal workers.

With threshing and harvesting operations nearly completed, the activities in the farm group in Manitoba were confined mainly to the fall demand for men for ploughing and cultivating. Calls for building labourers and tradesmen were numerous, while railway

construction and telegraph pole erection continued to absorb numbers of section workers, teamsters, groundsmen and labourers. The office at Winnipeg reported that several bushmen had been sent to fill the demand at the lumber camps in Western Ontario.

In Saskatchewan the peak of the harvest demand had passed, although the number of calls for thresher hands was still very great. Rainy weather had delayed threshing operations in some localities. A fair demand was reported in the construction group, elevator carpenters, building labourers and masons, being called for. Many teamsters, graders and section men were required for road construction, telegraph work and railway maintenance. There was a falling off in the demand for housekeepers and domestics, although the number of applicants available was not sufficient to meet the demand.

In Alberta the calls for harvesters had fallen off considerably and farmers had begun to place their orders for workers for fall ploughing. There were numerous requests for labourers and tradesmen for road construction, railway maintenance, and the erection of homes and public buildings. The offices continued to receive orders for experienced bushmen for the camps in the northern parts of the province.

With the continued fine weather in British Columbia the demand for fruit pickers and packers was very brisk, although few vacancies for general farm help were received. Bridge repair work, road paving and highway construction, absorbed a number of workers throughout the province. Building tradesmen and mechanics were well employed, with an increased call for carpenters, plasterers and painters. The rising demand for bushmen, sawyers, tiemakers and teamsters, for the logging camp was met without difficulty from the larger offices. The mining group was quiet with a few vacancies available for miners and labourers. The demand for permanent

household help was very great, with a scarcity of experienced workers.

#### EMPLOYERS' REPORTS.

Employment at the beginning of September as indicated in reports from employers of labour to the Dominion Bureau of Statistics, remained on practically the same level as at the first of August. There was, however, a very slightly downward tendency in evidence, partly due to men leaving their regular occupations to work in the harvest. Declines were most apparent in railway and highway construction and in water transportation. On the other hand, mining was decidedly more active, railway operation, trade, services, building construction and communication afforded increased employment and logging showed some seasonal revival. The Maritime provinces and Ontario reported considerable improvement, but in the remaining provinces contractions were indicated. Firms in Toronto, Winnipeg and Vancouver recorded moderately increased activity, while in Montreal, Ottawa and Hamilton decreases were registered. In Montreal there were declines in the employment afforded around the harbour and in tobacco and textile factories; there was some recovery in rubber and other branches of manufacturing, but the gains were not sufficient to counterbalance those declines. The expansion in Toronto was fairly general, the most important increases occurring in textiles. Small reductions in personnel were registered by a large number of Ottawa employers. The decreases in saw and paper mills and in car works were the largest. Improvement was recorded in Hamilton by manufacturers of electric current, electrical appliances and agricultural implements, while textile works were decidedly slacker. The changes in Winnipeg were slight; the largest additions were reported in iron and steel and building construction. In Vancouver small increases were registered in a number of industries. The largest

expansion in that city took place in steel shipyards, but these gains were partly offset by contractions in saw mills and in building construction. Employment in the manufacturing industries, as a whole, declined slightly. Saw mills showed the first falling off they had recorded since the beginning of the year, and textile and tobacco works were further affected by shut-downs. On the other hand, marked improvement was registered in rubber, iron and steel. Though comparatively slight, the increases in logging are interesting since they mark the reopening of the active season. Coal, other non-metallic minerals and metallic ore mining showed expansion and further gains were indicated in communication, services and trade. Railway operation and building construction also afforded more employment. These gains, however, were counteracted by contractions in water transportation, on railway and highway construction and maintenance.

An article elsewhere in this issue gives in some detail the employment situation as at the first of September.

#### TRADE UNION REPORTS.

The volume of unemployment at the end of August as reported by 1,440 labour organizations with a combined membership of 152,505 persons was slightly less than that reported at the end of July, 2.2 per cent of the members being out of work, as compared with 2.9 per cent at the close of July and with 3.6 per cent on August 31, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have

reference only to the organizations reporting.) All provinces registered improvement over July with the exception of Ontario and Manitoba where slight decreases in employment were shown. As compared with August of last year more work was afforded in every province except in Alberta where the same level of employment was maintained, and in Manitoba where the situation was not so favourable due largely to less activity for workers in the building trades. Returns received from 396 unions in the manufacturing industries with an aggregate membership of 45,982 persons showed that 1,316 of their members were out of work, a percentage of 2.9 as compared with 4.3 per cent in July and with 5.8 per cent in August of last year. Bakers, paper makers, textile and iron and steel workers were all more fully engaged than in July. Garment workers, owing to seasonal activity in the trade, reported considerable improvement. Within the iron and steel group boilermakers, carmen and sheet metal workers reported smaller percentages of unemployment but the situation was not so favourable for blacksmiths, moulders and patternmakers. Machinists reported the same percentage of idleness as in July. Employment for furniture and leather workers was in slightly lesser volume. Glass workers reported considerable inactivity. Nova Scotia and British Columbia coal miners reported no idle members and in the Alberta mines considerable improvement was shown. No unemployment was recorded by quarry workers in Nova Scotia. Workers in the building trades, as indicated by returns received from 174 unions with a membership of 16,199 persons, were not as fully engaged as in July. Bridge and structural iron workers and plumbers and steamfitters were better employed, but bricklayers, masons and plasterers, carpenters and joiners, electrical workers, granite and stone cutters, painters, decorators and paper hangers and tile layers, lathers and roofers were not so active. No

unemployment was registered by steam shovel and dredgemen and hod carriers and building labourers. In comparison with August of last year, employment was on a lower level in the building group, as a whole. More employment than in July was afforded transportation workers owing to greater activity for steam and electric railway employees. A slightly larger percentage of idleness was shown by workers in the shipping and stevedoring division. In the steam railway division, conductors, firemen and trainmen were more fully engaged, but engineers and maintenance of way employees reported the same number of idle members in July. Practically no change was registered by express employees. Fishermen reported no inactivity. Retail shop clerks were hardly as fully employed as in July and hotel and restaurant employees and stationary engineers and firemen also reported larger percentage of unemployment. Theatre and stage employees and barbers, however, were slightly more active.

**EMPLOYMENT OFFICE REPORTS.** During the month of August, 1923, the offices of the employment Service of Canada

made 66,273 references to positions and effected a total of 64,702 placements. Of the latter the number in regular employment was 57,481, of which 53,645 were of men and 3,836 of women workers. The placements in casual work numbered 7,221. Employers notified the Service of 74,440 vacancies, of which 64,357 were for men and 10,083 for women. Applications for work during the period totalled 73,033, of which 62,953 were for men and 10,000 for women. Compared with the preceding period this indicates a substantial gain in positions offered and placements made, the marked expansion being due to the seasonal call for harvesters and thresher hands. A corresponding increase in the registration of applicants was reported. A comparison with the same period for 1922

shows a very considerable increase in volume of business during this year. A report in detail of the work of the offices for the month of August may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED.** According to the Dominion Bureau of Statistics the value of the building permits issued in 56 cities during August declined to \$12,541,593 from \$13,544,137 in the previous month, and from \$17,946,228 in August 1922.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during September amounted to \$23,382,100, compared with \$27,488,700 in August and with \$29,313,500 in September, 1922. Business building amounted to \$5,374,200 or 22.6 per cent of the September total; industrial building, \$816,700, or 3.8 per cent; and public works and utilities, \$9,099,900 or 38.9 per cent. Of the total value of the contracts awarded in Canada during September, \$11,986,600 was to be spent in Ontario, \$6,733,000 in Quebec, \$3,393,800 in the Western provinces and \$1,268,700 in the Maritime provinces.

**PRODUCTION REPORTS.** According to the monthly reports of the Dominion Bureau of

Statistics the production of pig iron during August showed an increase of 13 per cent over the record for July. A tonnage of 92,587 gross tons was reported for the month under review as compared with a production of 81,647 tons in the previous month. The production was less than 700 tons below the highest output obtained in the corresponding month in other years and was only exceeded in August 1920. The amount of basic pig iron manufactured for further use by the reporting firms increased from 45,716 tons in July to 64,286 tons in August. The production of foundry iron was maintained while malleable iron dropped to 3,339 tons, a decline of 70 per cent from the

July output. During the eight months ending August 31 last, there was a total production of 609,380 tons, all grades, as compared with 251,015 tons produced during the corresponding period of 1922. In August the production of ferro-alloys was 2,258 tons compared with 2,342 tons in July. The whole production consisted of ferro-silicon of from 15 to 50 per cent grades produced in electric furnaces. At the end of the month there were in operation two furnaces at Hamilton, Ont., one at Port Colborne, Ont., three at Sault Ste. Marie, Ont., and three at Sydney, N.S.

The production of steel in August amounted to 105,056 long tons as compared with 73,532 tons in July. The August output was the greatest monthly output since November, 1920, when about 111,000 tons was produced. The output of basic open-hearth steel ingots for August was 100,817 tons, an increase of 45 per cent over the output for July when 69,722 tons was produced. The output of steel castings was 4,239 tons as compared with 3,810 in July. Basic open-hearth castings showed a small improvement, while bessemer and electric castings declined slightly. Acid open-hearth steel castings advanced to 523 tons, an increase of 221 per cent over July when 163 tons was produced.

A report from the Department's correspondent at Cobalt states that 24 cars of silver ore were shipped during the month from the Cobalt camp, containing approximately 1,795,535 pounds of ore, as compared with 29 cars of silver ore containing 2,200,792 pounds in the previous month. The Nipissing mine shipped 397 bars containing 452,047.02 ounces of silver, and The Mining Corporation of Canada shipped 264 bars containing 264,908.57 ounces of silver, making a total of 661 bars containing 716,955.59 ounces of silver for the month as compared with 493 bars

containing 526,868.93 ounces for the previous month.

A report from the British Columbia Forestry Branch shows that 299,961,575 feet board measure of timber was scaled in the province during August. The total includes Douglas fir, 137,752,275 feet; red cedar, 65,674,544 feet; spruce, 23,374,029 feet; hemlock, 38,994,584 feet; balsam, 9,205,313 feet; yellow pine, 7,917,336 feet; white pine, 5,037,686 feet; jack pine, 5,308,470 feet; larch, 5,733,139 feet; cottonwood, 919,540 feet; other species 44,659 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$21,953,169 in August as compared with \$20,976,770 in July. The gross earnings for the first eight months of 1923 amounted to \$159,739,066 as compared with \$142,163,951 for the same period in 1922.

The gross earnings of the Canadian Pacific Railway for August were given in a preliminary statement as \$16,417,124 in comparison with \$15,918,050 in the same month of the previous year; and for the eight months ending August 31, 1923, as \$112,940,453, while for the same period in 1922 they amounted to \$106,677,243.

### Strikes

The time loss due to industrial disputes reported to the Department during September was less than during either August, 1923, or September, 1922. There were in existence at some time or other during the month 17 disputes, involving 1,844 employees and a time loss of 35,237 working days, as compared with 18 strikes in August, involving 3,655 employees and a time loss of 37,257 working days. In September, 1922, there were recorded 23 disputes

involving 17,736 employees and a time loss of 99,732 working days. At the beginning of September there were on record 16 disputes involving 1,814 employees. One new dispute commenced during September, involving 30 employees with a time loss of 60 working days. This strike and three of the strikes commencing prior to September terminated during the month. At the end of the month, therefore, there were 13 disputes involving 978 employees.

### Prices

Retail prices of foods averaged slightly lower owing chiefly to a seasonal decline in the price of potatoes and in spite of seasonal increases in the prices of dairy products. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.46 at the beginning of September as compared with \$10.53 for August; \$10.28 for September, 1922; \$11.82 for September, 1921; \$16.92 for June, 1920 (the peak); and \$7.83 for September, 1914. Potatoes showed the greatest decline, but sugar, beef, and coffee were also lower. Eggs, butter, and cheese were substantially higher while there were smaller increases in pork, lard, bread, and tea. Including the cost of fuel and rent with that of foods, the budget averaged \$20.97 at the beginning of September as compared with \$21.03 for August; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.92 for July, 1920 (the peak); and \$14.33 for September, 1914. Fuel showed little change from the level in August but was somewhat lower than a year ago. Rent was practically unchanged.

The index number of wholesale prices in Canada constructed by the Dominion Bureau of Statistics showed a slight advance in September over the level in August. Based upon average prices in 1913 as 100 the index stood at 154.7 for September as compared with 153.3 for August; 145.4 for September, 1922; 161.8 for September, 1921; 256.9 for May, 1920 (the peak); and 213.3 for September, 1919. In the grouping according to chief component material six of the eight groups were up, the other two, the Iron group and the Non-Metallic minerals group were lower. In the classification according to purpose Consumers' Goods were up, due mostly to increases in foods, while Producers' Goods were slightly lower.

The index number based upon prices of 271 commodities in 1890-1899 as 100 published by the Department of Labour since 1910 was lower at 221.3 for September as compared with 222.7 for August; 220.5 for September, 1922; 232.7 for September, 1921; 356.6 for May, 1920 (the peak); and 141.3 for September, 1914. The most important advances occurred in fodder, dairy products, and textiles, while grains, animals and meats, fish, metals, paints, oil, and glass, and raw furs showed the principal declines.

The index number calculated by the Canadian Bank of Commerce based on prices 1909 to 1913 as 100 was lower at 158.44 for September as compared with 159.65 for August. Both imports and exports were down. Professor Michell's index of forty articles, twenty foods and twenty manufacturers' goods, based on prices 1900 to 1909 as 100 was slightly higher at 178.8 for September as compared with 178.6 for August. Foods were higher while manufacturers' goods were lower.

## CANADIAN IMPORTS AND EXPORTS DURING AUGUST, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of August, 1922 and 1923, and for the five months ending August of these years, and the exports, domestic

and foreign, of similar classes of goods for the same periods.

The following table shows the imports free and dutiable, and the exports domestic and foreign, of the various classes of products, for the month of August, 1923:

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
	\$	\$	\$	\$
Agricultural and vegetable products, mainly foods..	2,029,814	8,998,109	20,797,519	123,342
Agricultural and vegetable products, other than foods .....	1,536,366	2,194,991	3,145,542	99,794
Animal and animal products.....	1,711,214	1,916,629	14,177,445	187,968
Fibres, textiles, and textile products.....	4,694,203	10,596,581	744,136	146,040
Wood, wood products and paper.....	1,518,133	2,027,648	26,301,638	45,652
Iron and its products.....	3,081,326	13,854,191	4,510,421	353,488
Non-ferrous metals and their products.....	813,039	2,463,788	5,453,877	101,522
Non-metallic minerals and products.....	7,968,631	7,229,359	2,306,239	61,914
Chemicals and allied products.....	768,578	1,100,448	1,150,636	14,076
Miscellaneous commodities.....	2,080,461	2,232,165	1,433,956	169,831
Totals .....	26,201,768	52,623,909	80,021,409	1,308,027

In August, 1923, the duty collected amounted to \$11,850,806 as compared with \$11,759,792 in 1922.

The following comparative table shows the value of merchandise entered

for consumption, and the merchandise, domestic and foreign, exported in the months of August, 1922 and 1923, and in the five months ending August of these years respectively:

	Month of August		Five months ending August	
	1922	1923	1922	1923
	\$	\$	\$	\$
Merchandise entered for consumption.....	67,354,750	78,825,677	303,597,326	392,979,117
Merchandise, domestic, exported.....	73,386,199	80,021,409	316,640,668	386,226,799

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF SEPTEMBER, 1923.

**D**URING the month of September the Department received reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) The Algoma Steel Corporation, Limited, and certain of its employees, being engineers, firemen, conductors and brakemen, members of the Brotherhood of Locomotive Firemen and Enginemen and Brotherhood of Railroad Trainmen; and (2) The British Columbia Electric Railway Company and certain of its employees, being members of the Amalgamated Association of Street and Electric Railway Employees of America, Local Divisions No. 101, 109 and 134.

### Other Proceedings under the Act

In the case of a dispute between various railways, members of the Railway Association of Canada, including the Canadian National Railways and Canadian Pacific Railway, and certain of their employees being maintenance of way employees and railway shop

labourers, a Board was completed by the appointment of Mr. E. McG. Quirk, Montreal, appointed by the Minister in the absence of a recommendation from the other two members of the Board, Messrs. R. T. Riley, Winnipeg, and David Campbell, Winnipeg, nominees of the employers and employees respectively.

In the case of a dispute between the Canadian Pacific Railway Company and certain of its employees, being station agents, assistant agents, telegraph operators, train despatchers, traffic supervisors and linemen, members of the Order of Railroad Telegraphers, a Board was established and the following members appointed: Colonel O. M. Biggar, K.C., Ottawa, chairman, appointed by the Minister in the absence of a recommendation from the other two members of the Board, Messrs. J. B. Coyne, K. C., Winnipeg, and David Campbell, Winnipeg, nominees of the employer and employees respectively.

### Report of Board in dispute between the Algoma Steel Corporation, Limited, and certain of its employees.

A report was received from the Board established to deal with disputes between the Algoma Steel Corporation, Limited, and certain of its employees, being engineers, firemen, conductors and brakemen, members of the Brotherhood of Locomotive Firemen and Enginemen and Brotherhood of Railroad Trainmen. The Board was composed of Mr. J. G. O'Donoghue, K.C., Toronto, chairman, appointed by the Minister on the joint recommendation of the other two members of the Board, Messrs. F. H. McGuigan, Toronto, appointed by the Minister in the absence of a recommendation from the company, and the Honourable Senator G. D. Robertson, Ottawa, nominee of the employees.

The report was signed by the chairman and the Honourable G. D. Robertson and contained recommendations for the settlement of the dispute. A minority report signed by Mr. F. H. McGuigan was also received.

The text of the Board's report is as follows:

#### Report of Board

Montreal, P.Q., September 6th, 1923.  
*Re* Industrial Disputes Investigation Act, 1907, and *re* differences between the Algoma Steel Corporation, Limited, and certain of its employees, being engineers, firemen, conductors and brakemen, members of the Brotherhood of Locomotive Firemen and Enginemen and Brotherhood of Railroad Trainmen.

The Honourable,  
The Minister of Labour,  
Ottawa, Ontario.

Sir,

The undersigned members of the Board appointed herein beg to report as follows:

The Board met at Toronto on August 21st, 22nd and 23rd, and at Montreal on September 5th and 6th, to hear the parties interested in the dispute.

Mr. J. D. Jones appeared on behalf of the Algoma Steel Corporation, Limited.

The men were represented by:

Mr. H. H. Lynch, Vice-Pres., B. of L. F. and E.; Mr. Ernest DeCourcy, Chairman of the Enginemen's and Firemen's Committee; Mr. W. J. Babe, Vice-Pres., B. R. T.; Mr. Roy Kerr, Chairman of Conductors' and Brakemen's Committee.

It appeared that on November 1st, 1920, an agreement for a year was arrived at between the parties, and that subsequently, in January, 1921, the Corporation was forced by industrial conditions either to shut down or to submit to its employees a plan for a wage reduction. A reduction of 17.67 per cent was agreed to, the particular employees involved herein agreeing to a reduction (temporarily). In May and September following other reductions were made by the Corporation. The employees above mentioned protested but continued to work and later obtained the appointment of a Board of Conciliation (December 15th, 1921), which relegated the employees to the Courts for relief.

The employees before us endeavoured to protect what rights they had under the agreement of November, 1920, and have since continued to claim as "back pay" the full amount which would be due them if the terms of that agreement had been carried out.

Since the Board of December, 1921, made its report, the Corporation has voluntarily made two increases in pay. The total reduction amounted to about 35 per cent and the later increases to about 25 per cent.

The men now claim:

1.—The standardization of their rates with those paid employees of steam railways.

2.—The back pay due under the 1920 agreement.

3.—Eight hours a day.

4.—Time and a half for overtime after eight hours.

This Board endeavoured to bring the parties together but, although the best of goodwill and fairness existed between the disputants, no common ground could be found, and we, therefore, make our recommendation as follows:

#### STANDARDIZATION

In 1918, following a report by a Board of Conciliation appointed between these same parties, standard rates were put into effect by the Corporation, and those rates continued in force down to November 1st, 1920, when a new agreement was arrived at, in which agreement standardization was again determined upon, the clauses dealing with the matter being as follows:

The wage rates of engineers, firemen, conductors and brakemen in the transportation department will remain the same as those paid to similar classes employed in the Algoma Central Railway yard at Sault Ste. Marie.

The rates of the above classes of employees in the transportation department will be changed as the rates of similar men in the Algoma Central yard at Sault Ste. Marie are changed, any such changes becoming effective on the first day of any month in which these changes may be decided by the Railway Wage Board.

This agreement was carried out for two months, when, owing to a slump in business, a new arrangement was arrived at—as set out above.

The members of the Board are of the opinion that the principle outlined in the clauses quoted above is reasonable and should apply between the parties. The majority of the Board recommend the date of the application for the appointment of this Board, namely, July 4th, 1923, as the date upon which standardization should apply. Mr. McGu-

gan is of the opinion that the time is not yet opportune for the enforcement of standardization. His reasons are given below.

#### BACK PAY

While considerable merit is behind the claim of the men as to back pay under the 1920 agreement, the Board feels that under all the circumstances the claim should not be pressed.

#### EIGHT-HOUR DAY

The eight-hour day now obtains and should not be changed.

#### OVERTIME

We are of the opinion that time and one-half should be paid after eight hours where the overtime is caused by the Company.

### Report of Board in dispute between the British Columbia Electric Railway Company, Limited, and certain of its employees.

A report was received from the Board established to deal with a dispute between the British Columbia Electric Railway Company and certain of its employees, being members of Divisions No. 101, 109 and 134, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed as follows: Mr. A. M. Pound, Vancouver, chairman, appointed by the Minister in the absence of a recommendation from the other members of the Board, Messrs. A. G. McCandless and R. P. Pettipiece both of Vancouver, nominees of the company and the employees respectively. The report was unanimous and contained recommendations for the settlement of the dispute. These recommendations were subsequently accepted by both parties to the dispute.

The text of the Board's report is as follows:

#### Report of Board

In the matter of "Industrial Disputes Investigation Act, 1907", and in the matter of differences between the British Columbia Electric Railway Company, Limited, and the Amalgamated

All of which is respectfully submitted.

(Sgd.) J. G. O'DONOGHUE,  
Chairman.

" G. D. ROBERTSON,  
Representing the men.

#### Minority Report

While in accord with my colleagues of the Board regarding the equity, justice and wisdom of maintaining a standard (or equal rate) of pay for employees in yard service, performing the same or similar work, I regret my inability to agree with them regarding the yard employees in this case, believing, as I do, that it would be both unwise and unjust to increase the burdens of this Company under present financial, industrial and market conditions.

(Sgd.) F. H. MCGUIGAN,  
For the Company.

Association of Street and Electric Railway Employees of America, represented by Local Division No. 101 of Vancouver, British Columbia; Local Division No. 109 of Victoria, British Columbia; and Local Division No. 134 of New Westminster, British Columbia, comprising employees of the various Departments of the British Columbia Electric Railway Company, Limited.

To the Honourable James Murdock,  
Minister of Labour,

Ottawa, Canada.

Sir,

The Board of Conciliation and Investigation appointed in the above matter, consisting of Mr. A. M. Pound, Chairman, Mr. A. G. McCandless, representing the company, and Mr. R. P. Pettipiece, representing the employees, beg to submit the following report:

The Board met at the city of Vancouver, British Columbia, on August 27th, 1923, when the company was represented by Mr. W. G. Murrin, Vice-President, and Mr. Wm. Saville, General Secretary, of the company, while Mr. W. H. Cottrell, Mr. F. A. Hoover and others appeared for the men.

After the members of the Board had been sworn, the Chairman read the documents under the seal of the Department of Labour appointing himself, Mr. A. G. McCandless and Mr. R. P. Pettipiece as members of the said Board.

Regular sittings of the Board, at which all members were present, were held on the following dates:

August 27th, 28th, 29th, 30th, 31st.

September 1st, 6th, 7th, 11th, 17th, 18th, 19th, 22nd, 24th, 25th, 26th and 27th.

There were two adjournments to meet the convenience of the parties to the award.

According to records in our hands, the employees made application for the appointment of a Board of Conciliation and Investigation on August 10th, 1923, for the purpose of considering the following:

A request by employees for an increase of ten per cent (10%) in wages, and certain changes in working conditions, the same being equivalent to wages and conditions prior to January, 1922.

The chief arguments of the men in asking for an increase in wages were:

(1) That they were simply asking for something they had had previously, their wages having been reduced by ten per cent (10%) under the award dated November 30th, 1921.

(2) That they could not live on their present wages.

(3) That the percentage of increase in wages paid to street railway men in a number of the principal cities in Canada since 1919 was lower in Vancouver than in the other cities.

The company's contention was that the cost of living had decreased since the award of November 30th, 1921, by about five per cent (5%), and that this was not the time to ask for an increase in wages.

They also claimed, and filed exhibits, showing that the B. C. Electric Railway Company were paying higher wages

than that paid by any other street railway system in Canada operated by a company.

They objected to comparisons being made with wages paid by municipalities operating street railway systems.

A conference between the representatives of the employees and the company was arranged after the evidence was heard, but no progress was made by way of settlement, both sides agreeing the award be made from the evidence submitted.

After the Board had given careful consideration to the evidence and arguments submitted, it developed that the parties to the award could not get together, and, owing to the opinion expressed as to a settlement by the Chairman of the Board, and concurred in by the company's representative, the employees' representative withdrew from the deliberations. On the same day, Monday, the 24th of September, notice was served on the company that the men would go out on strike at 5 o'clock the following Wednesday morning. The deliberations of the Board on the question of an award were temporarily eclipsed by the possibility of a strike, and it was considered more important for the time being to take such action as might avert the strike. A full meeting of the Board was held on Tuesday morning, the 25th instant, and after an all day session the following settlement was accepted by both parties:

#### WAGE SCHEDULE

All platform men (motormen and conductors) shall receive three and one-half cents (3½c) per hour increase over the old schedule in agreement dated 5th January, 1922.

A two cents (2c) per hour increase for other employees who were reduced by ten per cent (10%) by the award dated November 30th, 1921.

*Train Despatchers:* We also recommend that train despatchers be increased by five dollars (\$5.00) per month each.

## SPREAD-OVER

*Section 39:* This section to be amended by striking out ten cents (10c) on the third line, and substituting therefor twenty cents (20c).

This has regard to the spread-over clause which now provides that motormen and conductors shall receive ten cents per hour in addition to their regular pay when a run is not completed within ten hours of the commencement of the first shift.

## REPORTING TIME

Conductors making relief on the road shall be allowed five (5) minutes for taking out

fare box and supplies. *Except* as above recited, the agreement dated January 5th, 1922, to remain as at present.

This Board would recommend that the above award be entered into by the company and employees for a period of one year dating from September 1st, 1923.

(Sgd.) A. M. POUND,  
Chairman,  
(Sgd.) R. P. PETTIPIECE,  
Representing the employees,  
(Sgd.) A. G. MCCANDLESS,  
Representing the company.

## PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT NO. 1

**T**WENTY-FIVE new decisions of the Canadian Railway Board of Adjustment have been received by the Department. (Summaries of earlier decisions of the Board appeared in the *LABOUR GAZETTE* for April, 1923, on pages 365 to 368, and in previous issues).

Case No. 156 has reference to the dismissal of a conductor of the Canadian Pacific Railway. Case No. 157 has reference to discipline of a despatcher of the Canadian National Railways. Case No. 158 relates to the appointment of an agent of the Canadian National Railways at Sydney, N.S. Case No. 159 relates to the dismissal of an agent of the Canadian Pacific Railway. Case No. 160 has reference to the rate of pay for an agent of the Canadian Pacific Railway. Case No. 161 relates to the employment of a married woman as telegraph operator by the Canadian Pacific Railway. Case No. 162 has reference to a claim of a telegraph operator of the Canadian Pacific Railway for extra pay. Case No. 163 has reference to the crew of a steam crane of the Canadian National Railways. Cases No. 164 and 165 deal with the claims of conductors of the Canadian National Railways for additional pay. Cases No. 166, 167 and 168 have reference to the claims of train

crews of the Canadian Pacific Railway for extra pay. Case No. 169 deals with the assessment of demerit marks of a conductor of the Canadian Pacific Railway. Cases No. 170 and 171 deal with the earnings of crews of the Temiskaming and Northern Ontario Railway. Case No. 172 has reference to a claim for the appointment of a yardman on a steam crane of the Temiskaming and Northern Ontario Railway. Case No. 173 relates to the claim of a brakeman of the Canadian Pacific Railway for pay for time lost when attending court. Cases No. 174 and 175 relate to the payment of engineers and firemen of the Canadian National Railways. Case No. 176 relates to the claim of a fireman of the Canadian National Railways for time held out of service. Case No. 177 relates to a claim of engineers and firemen of the Canadian National Railways for payment for side trips. Case No. 178 has reference to the claim of a fireman of the Canadian National Railways for payment on account of being called to Winnipeg for investigation. Cases No. 179 and 180 deal with controversies arising out of certain changes made in practices by the Canadian National Railways.

**Case No. 156. — The Canadian Pacific Railway, Western Lines, and the Order of Railway Conductors.**

A conductor on the Western Lines of the Canadian Pacific Railway was dismissed on the charge of irregularities in handling transportation. It was contended by the company that the evidence produced was sufficient to justify the action taken but it was maintained by the employees that the charges against the conductor originated in a desire for petty revenge and that the evidence was inconclusive and contradictory.

By decision of the Board the claim of the employees was denied.

**Case No. 157. — Canadian National Railways, Atlantic Region, and the Order of Railroad Telegraphers.**

A train despatcher of the Canadian National Railways was reduced from despatcher to operator on account of the delay of two trains and for other irregularities. It was contended on his behalf that the discipline was too severe and at most should not exceed a few demerit marks. It was further contended that the other irregularities referred to had never been specified or investigated. The Telegraphers asked that he be restored to his position of despatcher and be paid the difference in salary as between that of despatcher and other positions which he had filled. The Board stated that no evidence was produced to show that this despatcher had ever done anything unsatisfactory in the performance of his duties, or apart from this one case that he was incompetent. The Board held that while he should have notified the despatcher who relieved him that a passing track at a siding was blocked with cars, the discipline for this offence appeared excessive.

By decision of the Board the claim of the employees was sustained to the extent that this despatcher be reinstated to his former position without pay for time lost.

**Case No. 158. — The Canadian National Railways, Atlantic Region, and the Order of Railroad Telegraphers.**

A vacancy for the position of agent at Sydney, N.S., was bulletined to all telegraphers in the territory by the Canadian National Railways. The position was awarded not to the senior applicant but to one junior to him. The contention of the Railways was that they did not consider the experience of the senior applicant had qualified him for this position, also having in mind that he was over sixty years of age; and that promotions were governed by merit, fitness and ability of which the general superintendent was the judge. The Telegraphers contended that this was a direct violation of both the letter and spirit of the schedule agreement, and that such action disqualified the senior applicant without a trial and constituted a grave injustice.

The decision of the Board was as follows:

The position of the Railways is in accord with the language of the schedule and is, therefore, sustained. It is recommended, however, in view of the long service of Mr. McD., that the Railways take the case under consideration.

**Case No. 159. — The Canadian Pacific Railway, Western Lines, and the Order of Railroad Telegraphers.**

An agent of the Canadian Pacific Railway, Western Lines, was dismissed for the appropriation of the Company's materials. The employees stated that he admitted having taken some pieces of broken grain doors to line a small hen-house, but that such pieces had been accumulating for years and no instructions had been received to ship them anywhere. They contended that the discipline was both excessive and inconsistent for the offence charged, and that the assessment of demerit marks would have been ample. They asked for his reinstatement with pay for all time lost.

The Company stated that the cost of supplying grain doors was very heavy, partly due to the misuse of these doors. Many arrests have been made and con-

victions secured against parties guilty of misappropriating grain doors. Instructions were issued periodically that damaged grain doors must be carefully preserved, and arrangements were made to ship them to a central point to be repaired.

Soon after agent T. was notified that his services were dispensed with, the superintendent offered to allow him to transfer to another station after two shippers had asked for leniency on his behalf, but this offer was declined on the ground that he had been unjustly dealt with, and should be returned to his old position.

The Board felt that the offence under all the circumstances did not warrant the removal of the agent from his position. By decision of the Board the claim of the employees was sustained to the extent that the agent should be reinstated but without pay for time lost.

**Case No. 160. — The Canadian Pacific Railway, Western Lines, and the Order of Railroad Telegraphers.**

An agency of the Canadian Pacific Railway was opened at Naicam on October 17, 1921, but the line was not open for traffic until January 19, 1922, and a minimum rate of \$133 was paid to the agent. The local Telegraphers' committee made a protest to the Superintendent that a higher rate should apply to the station and it was finally agreed to increase the rate to \$137 per month from January 1, 1923. The Telegraphers maintained that the new rate should be retroactive from the date when the station was opened. It was contended for the Company that the agent was amply paid for services rendered, and that when the matter was under discussion with the General Manager, no reference was made to the new rate being retroactive.

The Telegraphers contended that in November, 1921, when the agent first took up his case for more salary, commissions were negligible and he had no dwelling, while early in 1923 a new station was erected with dwelling for the

agent, and commissions had increased. They therefore claimed that if the rate of \$137 was justified from January 1, 1923, there was far more reason for its being put into effect prior to that time.

By decision of the Board the claim of the employees was sustained to the extent that the rate of \$137 should apply from March 1, 1922.

**Case No. 161. — The Canadian Pacific Railway, Western Lines, and the Order of Railroad Telegraphers.**

A controversy arose with reference to the retention of a married woman in the service of the Canadian Pacific Railway as telegraph operator. The facts of the case were summed up by the Board as follows:

Owing to the shortage of telegraphers during the war, the Company found it necessary to employ married women in some instances, and, in the year 1916, employed Mrs. G. as operator on the Kenora Division. Mrs. G., who is the wife of an agent employed by the Company, remained in the service until the winter of 1921. At this time it was found that several telegraphers with families were out of employment on this Division, and the Company requested all married women who had husbands to support them, and were in a position to do so, to resign from the service in order to give work to married men with families. Mrs. G., alone, refused to resign and referred the matter to the Organization. The chairman of the Order of Railroad Telegraphers, on appealing the case to the General Manager of the Company, secured an agreement that Mrs. G. would be allowed to exercise her seniority to bid in positions each fall, and hold such positions until such times as general reductions take place.

The decision of the Board was that, as the representatives of the Company and the Telegraphers had reached an agreement which appeared to be fair and reasonable, that agreement should stand.

**Case No. 162. — The Canadian Pacific Railway, Western Lines, and the Order of Railroad Telegraphers.**

A swing trick telegrapher of the Canadian Pacific Railway claimed sixteen hours overtime at *pro rata* rate for sixteen hours' service rendered on Thanksgiving Day, Christmas and New Year's

Day in accordance with Article 15 of the Telegraphers' Schedule. On these days he had two assignments of eight hours each and in each instance he worked both of them.

The Company claimed that there was no question about the telegrapher being entitled to the extra day's pay for the first trick worked on the holiday, but as he was given Friday off in lieu of the extra trick worked on Thursday which fell on a holiday it would mean that he would be paid two days on Thursday and would be given an extra day on Friday.

The employees contended that the number of days in a week this telegrapher may have been idle had no bearing on the claim for overtime.

By decision of the Board the claim of the employees was sustained.

**Case No. 163. — The Canadian National Railways, Western Lines, and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.**

The Canadian National Railways had a self-propelling steam crane on the main line and when it was being operated it was placed in charge of a conductor without a brakeman. The employees contended that the steam crane was being operated as a work train, and, therefore, according to the conductors' and trainmen's schedules, the conductor on this job should be supplied with two brakemen.

The railways claimed that the steam crane was not a train, and any section foremen who had passed the operating rules could be used with perfect safety, but that on account of having so many spare conductors the superintendent preferred to give it to the oldest passed conductor working as a brakeman. As a conductor who was regularly set up was not used, Rule 1 of the conductors' schedule did not apply.

The claim of the employees was sustained by the Board.

**Case No. 164. — The Canadian National Railways, Western Region, and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.**

A conductor of the Canadian National Railways was called to take an

engine from Transcona to Vivian, a distance of 23½ miles, and he was then employed as brakeman from Vivian to Winnipeg, a distance of 30 miles. He submitted a trip ticket for 100 miles, which is the minimum, as conductor from Transcona to Vivian, and the conductor of the train on which he went to Winnipeg submitted his name on the trip ticket as brakeman and the mileage to which he was entitled as 100 miles. The contention of the railways was that the service was continuous and consequently settlement was offered at the highest rate for the entire trip, namely conductors' rate at a minimum of 100 miles.

The employees contended that he was entitled to a minimum day, or 100 miles, in each class of service.

The opinion of the Board was stated as follows:

It does not appear that a claim is justified for twice as much pay for a man, running as conductor with a light engine and returning as a brakeman, as he would receive in the capacity of conductor in both directions. He should, however, receive at least a minimum day's pay at conductor's rate for the combined service.

The claim of the employees was therefore denied.

**Case No. 165. — The Canadian National Railways, Western Region, and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.**

A conductor and crew of the Canadian National Railways were called at Atikokan to take a train of grain east. When they arrived at Huronian (45 miles distant), they were ordered to set out the train and pick up a train of steel for distribution between Huronian and Atikokan. They claimed terminal time at Atikokan and 100 miles in through freight service for the trip to Huronian, and 9 hours and 30 minutes in work train service for return trip. This claim was reduced by 55 miles, and only the actual 45 miles from Atikokan to Huronian allowed.

A similar claim was made by another crew which took a through freight train

from Port Arthur to Huronian and

then picked up a train of steel for distribution between two other points.

The railways contended that these were not regularly assigned work trains and the service was practically continuous, and did not agree that the schedule in effect called for a minimum day to be paid for each class of service between terminals. The employees contended that the schedules provided for a minimum of eight hours or 100 miles in work train service and the same in through freight service and that therefore in the above mentioned cases the minimum day should be allowed in through freight service in addition to the time claimed in work train service.

By decision of the Board the claim of the employees was sustained.

**Case No. 166. — The Canadian Pacific Railway, Western Lines, and the Brotherhood of Railroad Trainmen.**

A conductor and crew of the Canadian Pacific Railway were detained at Winnipeg while the caboose to which they were assigned was being repaired. Before the caboose was made serviceable nine crews who had arrived later were despatched. The conductor and crew claimed nine run-arounds.

The Company submitted that for many years it had been an accepted practice that under the above conditions claims for run-arounds would not be made or recognized. Repairs to the caboose were dealt with promptly. Similar cases had always been dealt with along the same lines and the Company did not believe it would be desirable to place a crew whose caboose was being held a short time for repairs into the caboose of the next crew out in order to avoid run-arounds.

The employees claimed that the conductor and crew were entitled to fifty miles for each of the run-arounds and that the Company's officers were not justified in refusing to pay under Article 14 of the Schedule, there being no agreement in effect exempting the Company from paying unassigned freight crews when their caboose is in bad order.

The Board held that the action of the Company was a reasonable one and in conformity with the usual established practice, and the claim of the employees was therefore denied.

**Case No. 167. — The Canadian Pacific Railway, Western Lines, and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.**

A crew of the Canadian Pacific Railway assigned to mixed train service between Riverton and Winnipeg did not reach Winnipeg, owing to an accident, in time to go out on their regular run on that day. They were held at Winnipeg to go out on their regular assignment the next day. The men claimed all time held in Winnipeg, in addition to a full day's pay for the single trip.

The Company claimed that they were paid for their full day's work and exceeded their guarantee for that month, and maintained that they were fully paid in accordance with the agreement.

The employees claimed that there was no provision in the schedule which permitted payment under one system today and another to-morrow to suit a condition of this kind, and the crew should therefore be paid in the same manner on this occasion as on other occasions when there was not the same amount of delay in Winnipeg, in other words the crew had only one terminal and when they left their terminal they were entitled under the schedule to continuous time until they returned there.

By decision of the Board the claim of the employees was sustained.

**Case No. 168. — The Canadian Pacific Railway and the Brotherhood of Railroad Trainmen.**

This case was similar to Case No. 166, arising from a claim of a crew of the Canadian Pacific Railway for run-arounds for the time when their caboose was undergoing repairs. As in the previous case the claim of the employees was denied.

**Case No. 169. — The Canadian Pacific Railway and the Brotherhood of Railroad Trainmen.**

A conductor of the Canadian Pacific Railway was given ten demerit marks for exceeding the speed limit of twenty-five miles an hour prescribed for freight and mixed trains. According to the Company he admitted that he did not check the speed as he was busy doing clerical work at the time the test was made. The employees claimed that he should not have been disciplined as it was night when the test was made and there was an extra amount of checking to be done, and it would be difficult to do this and check closely the train.

When representatives of the two parties appeared before the Board it developed that as the result of subsequent good record, the demerit marks had been removed from the conductor's record, and no further action was taken by the Board.

**Case No. 170. — The Temiskaming and Northern Ontario Railway Commission and the Brotherhood of Railroad Trainmen.**

A controversy arose as to the manner of calculating earnings of crews in charge of a passenger extra of the Temiskaming and Northern Ontario Railway. This extra left Englehart at 8.30 a.m. on May 31, 1922, and tied up for a night at Iroquois Falls at 5 p.m. The crew came on duty at 7 a.m. next morning, ran to Timmins and from there went to Cochrane, arriving at 4.15 p.m. The Commission calculated the earnings of the crew as two separate days, deducting the time the crew were tied up at Iroquois Falls. The employees claimed that time or mileage should be continuous from the time required to report at Englehart until released at Cochrane. The contention of the Commission was based on the accepted practice of the railway, according to which an unassigned crew might be considered off duty at any terminal provided such crew was provided with a van and actually relieved from duty. It was admitted that there was no rule in the schedule to cover this point, but

the Commission claimed that an examination of old trip tickets proved their contention was correct.

The Commission stated that Timmins and Iroquois Falls were home terminals for crews running branch line trains.

The contention of the employees was based on Rule 26, paragraph (c) of their schedule which reads as follows:

Points on current time-table where one or more trains end are terminal points for such trains. The meaning of terminal in the foregoing article is understood to be the regular points between which crews regularly run; for instance, the terminal from which a branch line projects would be the terminal for the branch, but not necessarily for the section from which the branch line springs.

They contended that Timmins and Iroquois Falls, being branch line terminals and not lines between which crews regularly run, are not to be classed as terminals for main line crews, and they therefore contended that a crew used from Englehart to Iroquois Falls, thence to Timmins, thence to Cochrane, should be in continuous service; otherwise, if Timmins and Iroquois Falls were designated terminals, the automatic release should apply.

In a general statement of the Board it was declared that the representative of the employees indicated that their particular claim was that Timmins and Iroquois Falls, the branch line terminals, should, for unassigned crews in extra service, be regarded in all cases either as terminals or turn-around points.

The decision of the Board was as follows:

The employees' claim that the branch line terminals mentioned should be regarded either as terminals or as turn-around points, under the conditions stated, is sustained.

The Board is of the opinion that in view of the local conditions, the representatives of the Commission and of the employees are best qualified to decide directly between themselves as to the best practice to be followed, and recommend that they should decide in joint conference what practice should be adopted.

**Case No. 171. — The Temiskaming and Northern Ontario Railway Commission and the Brotherhood of Railroad Trainmen.**

A passenger extra of the Temiskaming and Northern Ontario Railway was

run from Englehart to Charlton and back to Englehart, thence to Cochrane where it was released. The conductor put in a trip ticket claiming 100 miles for the trip from Englehart to Charlton and returning, and showing trip from Englehart to Cochrane via Timmins and Iroquois Falls as a new day. The Commission reduced this ticket to actual miles from Englehart to Charlton and return, and calculated the mileage from the time required to report at Englehart until released at Cochrane. The Railway Commission claimed that the distance from Englehart to Charlton was 8.4 miles and that in their opinion there was nothing in their schedule or in ordinary railway usage to require them to pay a day's pay for the movement from Englehart to Charlton and return. It occupied in all two and a half hours.

On behalf of the employees it was claimed that Article "E" of the schedule provides that runs of 100 miles or less, eight hours or less, for straight-away or turn-around shall, except as otherwise provided in Rule 26, be paid as 100 miles. This rule covers conditions in which short trips and turn-arounds may be made. A decision with regard to the interpretation of Supplement 16 was quoted in which it is stated that the practice of coupling short turn-arounds with straight-away runs is eliminated. It is claimed that the crew in question made a short turn-around, returned to the original terminals and was then used in straight-away service.

By decision of the Board the contention of the employees was sustained.

**Case No. 172. — The Temiskaming and Northern Ontario Railway Commission and the Brotherhood of Railroad Trainmen.**

A claim was made by the Brotherhood of Railroad Trainmen that a yardman should be placed in charge of a self-propelling steam crane that was used by the Temiskaming and Northern Ontario Railway for moving cars in the North Bay Junction yard. According to the joint statement this crane is employed usually in the material yard

at North Bay Junction, loading and unloading heavy materials. When working in this yard loaded and empty cars are moved by the crane, the work of coupling and uncoupling and throwing switch being performed by the material yard foreman. The Brotherhood of Railroad Trainmen asked that a yardman be placed in charge of all switching movements to be made by this crane. The Commission contended that the number of cars switched was very small and that it could not be expected to employ a switchman who would be required to work less than one-half an hour a day for which he would have to be paid eight hours. The employees claimed that at almost every move this crane used an interlocking plant and worked against freight and passenger main line trains. Prior to May 25, 1922, they stated that this switching was performed by yard crews according to yardmen's schedule but about this time the Commission undertook to have the locomotive crane do its own switching and declined to place switchmen in charge.

By the decision of the Board the claim of the employees was denied in so far as it applied to the operation of a crane in the material yard, under the conditions of the scheme of the Commission.

**Case No. 173. — The Canadian Pacific Railway, Western Lines, and the Brotherhood of Railroad Trainmen.**

A brakeman of the Canadian Pacific Railway was charged with theft from a Canadian Pacific freight car. When the trial came off he was acquitted by the Court. He then made a claim for pay for the time that he was out of the service of the Company attending court. The Company declined to allow this claim. In the statement of this case the Company described the circumstances leading to the arrest of this employee, and contended that the circumstances and evidence indicated at least a guilty knowledge on the part of the brakeman, and felt that in allowing him to return to the service a most sharitable view of the matter was taken by the

Company's officers, and submitted that the claim for payment for time out of the service attending trial should not be conceded.

In support of their contention the employees quoted a part of Article 10 of the Trainmen's Schedule which reads as follows:

Should the charge not be proven the trainman will be reinstated at once and paid for all time lost at schedule rates and reasonable actual expenses.

By a decision of the Board the claim of the employees was denied.

**Case No. 174. — The Canadian National Railways, Western Region, and The Brotherhood of Locomotive Firemen and Enginemen.**

A controversy arose with reference to the payment of engineers and firemen of the Canadian National Railways under Articles 3 and 7 of the Engineers and Firemen's Schedules. These Articles read as follows:

*Article 3: Basic Day—*

(a)—1. One hundred miles or less, five hours or less to constitute a day on passenger service, overtime *pro rata*.

2. One hundred miles or less, eight hours or less to constitute a day in all other service, overtime *pro rata*.

*Article 7: Short Runs—*

(a) On short runs where the mileage of round trips is fifty miles or less, 100 miles and terminal switching will be paid, also overtime.

(b) All other short runs will be paid on the basis of 100 miles one way and mileage and terminal switching the other way, except in cases where overtime is made in either way, when such overtime will be paid.

(c) If an engineer (or fireman) is ordered out on another short run, or runs, and such run or runs completed within 24 hours from the time he was first ordered for, he will be paid actual mileage and terminal switching, also overtime. This to apply to continuous service.

The employees contended that Article 7 only applied when crews were not tied up at the turn-around point and that Article 3 applied to all runs where crews were tied up and relieved from duty after completing the first leg of the run, unless payment is allowed for

all time at the turn-around point, in which case Article 7 will apply. The railways contended that the argument of the men had been raised in cases of short turn-around runs covered by time table schedule where the crews had a lay over at the turn-around point and it was held that they were properly paid for this service under Clause "B" of Article 7.

The decision of the Board was as follows:

The Railways have the option of paying for any run as a basic day in each direction under Article 3, or as a short run in turn-around service under the provisions of Article 7. In the event of a run being paid for as a short run in turn-around service, the time is continuous. On assigned runs paid as short runs in turn-around service, the Railways would necessarily designate the initial point of the run.

**Case No. 175. — The Canadian National Railways, Western Region, and the Brotherhood of Locomotive Engineers, and The Brotherhood of Locomotive Firemen and Enginemen.**

A controversy arose with regard to the payment of engineers and firemen of the Canadian National Railways under Clause "B", Article 24, of the Engineers and Firemen's Schedule.

This clause reads as follows:

Engineers and firemen who are notified by superintendent or master mechanic that they may go home for Sunday, will not be paid for Sunday. Transportation will be furnished by wire or otherwise, provided such transportation can be used. If transportation cannot be used men will be paid as if held for service.

The employees contended that the above quoted article provided that if the Company failed to get the men to their home terminals for Sunday, that they would be paid for the day. They claimed that this had always been the understanding and they had been paid for this until recently when the practice was discontinued.

The contention of the Company was stated as follows:

Our claim is that if the Company move the crew to the nearest terminal for Sunday, and do not tie them up at the gravel

pit, they have fulfilled the spirit of the agreement without paying the men more than they actually perform a service for. Universal promotion prevails for enginemen on the Western Region, embracing between ten and eleven thousand miles of railway, and in many cases men bidding in work train jobs make long jumps from their actual homes, and it is all the same to them to which terminal they go of the subdivision where they take a work train.

The following decision was rendered by the Board:

The contention of the employees is sustained, the understanding being that "Home Terminal" referred to in Article 24, Clause "B" is the home terminal of the sub-division employees are working on at the time Sunday release is requested.

**Case No. 176. — The Canadian National Railways, Western Region, and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.**

A fireman of the Canadian National Railways was held out of service for refusing to continue work unless he was allowed to take a fresh tank of coal at the Fort Rouge coal dock. He was called the next morning to appear before the assistant master mechanic for investigation. The investigation was finally held nine days later, when he was assessed ten demerit marks and returned to service. He made a claim for pay for 900 miles for being held out of the service for nine days. The employees contended that when the engine arrived at the coal dock its tender should have been supplied with coal instead of being turned back into the yard, and that a sufficient supply of coal should have been furnished the fireman at the commencement of the shift to enable him to complete it without having to shovel coal ahead, which endangers life and property, as a fireman who is back in the tender trimming coal would be unable to take signals and protect his engine. It was contended that Article 35 of the Firemen's Schedule provides that firemen will be given a full tender of coal upon commencement of shift.

The Company contended that the nine days' delay in holding the investigation was not the fault of the Company as there would have been no lost time if the fireman had responded to the first call. The Company further contended that on this occasion the assistant master mechanic found there was no occasion to take coal at the Fort Rouge coal dock as the coal in the tender was not out of the reach of the fireman.

By decision of the Board the claim of the employees was denied.

**Case No. 177. — The Canadian National Railways, Western Region, and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.**

A claim was made by engineers and firemen of the Canadian National Railways for time consumed in making side trips on sub-divisions in keeping with Article 2, paragraph "E" of the Engineers and Firemen's Schedule. This paragraph reads as follows:

Engineers and firemen will be paid not less than 10 miles for doubling and actual miles in excess of 10 miles. Engineers and firemen making side trips on sub-divisions will be paid on same basis as doubling and be paid terminal switching at the turnaround point of the side trip.

The contention of the employees was that doubling under this Article was an arbitrary allowance and if engine-men were required to make side trips on sub-divisions they would be paid in keeping with this Article.

The Company contended that a minimum of 10 miles was to be allowed for double or side trips but only if it did not average overtime and not if they were paid constructive mileage. To this extent alone was the provision considered arbitrary.

The decision of the Board was as follows:

The Board understands the contention of the employees is that mileage made on side trips shall be paid for as an arbitrary.

The claim of the employees is sustained on the understanding that no mileage included in an assigned run shall constitute a side trip.

**Case No. 178. — The Canadian National Railways, Western Region, and the Brotherhood of Locomotive Firemen and Enginemen.**

A fireman of the Canadian National Railways, after being on duty for 13 hours and 10 minutes, wired a despatcher 12 miles from a terminal that he was tying up for rest. The next day he was called to Winnipeg for investigation on account of having booked rest. This caused him to lose one round trip for which he submitted tickets which were disallowed. The employees contended that this fireman did not violate any rules of the Company when he booked rest and contended that he had the right to book rest under Article 10, Class "B" of the schedule which reads as follows:

Trains may be laid up between terminals for firemen to obtain rest after they have been twelve hours on duty upon advice to train despatcher, but if despatcher will cut out all way work and switching trains may be taken through to terminals. Firemen to be the judge of their own condition.

The Company submitted that with the light tonnage the train had, and no way work or switching to do, it would have been no hardship for this fireman to take his train to its destination which required about forty minutes more.

It was stated by the Board that the evidence showed the fireman had lost two days because of being held off on orders of the Railways. No evidence was produced to show that he was guilty of violating any schedule rule, and he was returned to service.

By decision of the Board the claim of the employees was sustained.

**Case No. 179. — The Canadian National Railways, Atlantic Region, and the Brotherhood of Locomotive Firemen and Enginemen.**

A controversy arose with reference to the running of mountain type locomotives over two different seniority districts and compelling enginemen of respective districts to follow engines to terminal points. The contention of the Railways was that the assignment of

mountain type stoker-fed passenger engines to two sub-divisions between Campbellton and Rivière du Loup made it desirable that enginemen be assigned to the engines and follow them. The mileage of the two sub-divisions is 188 miles and the Railways claimed that the time was distributed as equally as possible between the Campbellton and Rivière du Loup men. By this plan there was a saving in time to engine crews equal to 64 miles a day. The employees contended that the action of the Railways in forcing the interchange of seniority rights of enginemen broke up an established practice which had been in effect for over 30 years, and further that this action constituted a violation of the interpretation of the United States Railway Labour Board on General order No. 27 and supplement thereto, that it was in direct opposition to the rulings that "past practices and customs are not to be interfered with", and it was further contended that the action of the Railways constituted a violation of Article 30 of the Enginemen's schedule.

The decision of the Board was as follows:

The contention of the employees is sustained. Under the existing agreement men should not be run off their seniority district except by mutual arrangement.

**Case No. 180. — The Canadian National Railways, Atlantic Region, and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.**

Instructions were issued by the Canadian National Railways under date of July 22, 1923, relieving enginemen from any actual inspection after arrival at the roundhouse tracks, but not relieving them of recording in the repair book at the enginehouses any defects or attention required to the engine observed by them while in actual operation or at stops between terminals; the intention being to eliminate as far as possible payments made under Article 3, Clause "D", and Article 6, Clause "C" of Enginemen's schedule.

The contention of the Railways was as follows:

Under the schedule in effect with engine-men on the Atlantic Region of the C. N. R., engine-men are not required to inspect their engines after arrival at final terminal and in order to eliminate final terminal delay as much as possible it was decided to discontinue previous practice of allowing engine-men a certain amount of time for such inspection in computing final terminal delay, and bulletin was issued relieving engine-men from this work at points where inspectors or mechanics are employed for that purpose.

On behalf of the employees it was claimed that the action taken by the

Railways had broken established practices on these railways and had also broken the spirit of the schedule agreement, as under the final terminal delay clauses of the schedule this service was provided for, and no provision was made for delays on the minute basis. They requested that former conditions of service be adhered to and payment refunded to engine-men who had been deprived of remuneration for service rendered after arrival on account of such ruling being put into effect.

By the decision of the Board the claim of the employees was denied.

### STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1923

THE number of strikes and lockouts in Canada in existence at some time or other during the month of September was one less than in August. The time loss for September was less than in September, 1922, being 35,237 working days as compared with 99,732 working days lost in the corresponding month of the previous year.

Date	Number of disputes	Number of employees involved	Time lost in working days
September, 1923.....	17	1,844	35,237
August, 1923.....	18	3,655	37,257
September, 1922.....	23	17,736	99,732

Sixteen disputes involving 1,814 work people were carried over from August. Three of the strikes commencing prior to September and one commencing during September terminated during the month. At the end of September, therefore, there were on record 13 strikes: clothing workers, Toronto; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing

compositors at Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; motormen and conductors, Niagara Falls, and longshoremen along the Miramichi River.

Three of the strikes which terminated during the month terminated in favour of the employers, and a fourth ended in a compromise. The industries chiefly affected by disputes were: Printing and Publishing, where ten disputes involved 697 employees and resulted in a time loss of 16,772 working days; Mining, Non-Ferrous Smelting and Quarrying, one strike involving 620 employees, and a time loss of 9,118 working days, and Water Transportation, two strikes, 429 employers and 8,506 working days.

The record of the Department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the

Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

Information was also received in the Department relating to a dispute causing an interruption to industry during September, which was not a strike as above defined. At Wayne, Alta., 30 coal miners ceased work for a few hours in sympathy with the coal miners on strike at Drumheller. On being informed that the District President of the Union had ordered the Drumheller miners back to work, the Wayne miners resumed operations.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**RAFTING CREW, SOUTH DEVON, N.B.:**—The strike of 37 members of a rafting crew in the employ of a pulp and paper company at South Devon, N.B., which commenced on June 26, for increased wages, was terminated September 3. When river conditions permitted the starting of rafting operations a new crew was taken on and the strikers' places were filled.

**COAL MINERS, DRUMHELLER, ALTA.:**—On August 30, coal miners employed at various mines throughout Drumheller ceased work owing to alleged discrimination against a fellow worker. Negotiations were carried on without any result, and as a final effort to bring about the settlement of the strike, the charters of two locals were revoked, and orders were issued by the President of the United Mine Workers of District 18 that work be resumed without any further delay. On September 18, the miners decided to return to work and to submit their dispute to an independent chairman for settlement.

**SEAMEN, VANCOUVER, B.C.:**—On June 29, seamen at Vancouver went on strike for an increase in wages. Negotiations were carried on, but no settlement was arrived at, and the strikers' places were filled by other workers. On September 19, the Union concerned voted to call the strike off.

**TAXI-CAB AND HACK DRIVERS, ST. JOHN, N.B.:**—On September 26, a strike of 30 taxi-cab and hack drivers occurred at St. John, N. B., against new rules being put into effect as to how they were to solicit their fares. The strike lasted for two days and was finally settled by a compromise being effected on September 28.

## STRIKES AND LOCKOUTS DURING SEPTEMBER, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

## (a) Strikes and lockouts commencing prior to September, 1923. .

## LOGGING—

Rafting crew, pulp and paper, South Devon, N. B.	37	37	Commenced June 26, for increased wages. Strikers were replaced by other workers and operations were resumed September 8.
--	----	----	--

## MINING, NON-FERROUS, SMELTING AND QUARRYING—

Coal miners, Drumheller, Alta.	620	9,118	Commenced August 30, alleged discrimination against employee. Men were ordered back to work by the District Officials of the U. M. W. of A. Work was resumed September 18.
--------------------------------	-----	-------	--

## MANUFACTURING—

## Clothing:

Clothing workers, Toronto, Ont.	25	600	Commenced April 16, for recognition of the union. Terminated.
---------------------------------	----	-----	---

## Printing and Publishing:

Photo engravers, Montreal, Que.	7	188	Commenced May 2, 1921. For shorter hours. Terminated.
---------------------------------	---	-----	---

Printing compositors, Hamilton, Ont.	10	240	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Terminated.
--------------------------------------	----	-----	---

Printing compositors, Montreal, Que.	10	240	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Terminated.
--------------------------------------	----	-----	---

Printing compositors, Montreal, Que.	140	3,360	Commenced July 1, 1921. For increased wages and 44-hour week. Terminated.
--------------------------------------	-----	-------	---

Printing compositors, Montreal, Que.	12	288	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Terminated.
--------------------------------------	----	-----	---

Printing compositors, Toronto, Ont.	329	7,896	Commenced June 1, 1921. For increased wages and 44-hour week. Terminated.
-------------------------------------	-----	-------	---

Printing compositors, Winnipeg, Man.	74	1,776	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Terminated.
--------------------------------------	----	-------	--

Printing compositors, and pressmen, Halifax, N. S.	24	600	Commenced May 2, 1921. For shorter hours with same weekly wages. Terminated.
--	----	-----	--

Printing compositors and pressmen, Ottawa, Ont.	80	1,920	Commenced June 1, 1921. For increased wages and 44-hour week. Terminated.
---	----	-------	---

Printing compositors and pressmen, Vancouver, B. C.	11	264	Commenced May 2, 1921. For increased wages and 44-hour week. Terminated.
---	----	-----	--

## TRANSPORTATION—

## Street and Electric Railways:

Motormen and conductors, Niagara Falls, Ont.	6	144	Commenced July 2, 1922. For recognition of union. Terminated.
--	---	-----	---

## Water transportation:

Longshoremen, Miramichi River, N. B.	250	6,000	Commenced July 9, for increased wages and shorter hours. Terminated.
--------------------------------------	-----	-------	--

Seamen, Vancouver, B. C.	179	2,506	Commenced June 29, for increased wages. Strikers were replaced by other workers September 19.
--------------------------	-----	-------	---

## (b) Strikes and lockouts commencing during September, 1923.

## TRANSPORTATION—

## Local Transportation:

Taxi and hack drivers, St. John, N. B.	30	60	Commenced September 26, against the rules of securing passengers. Settled by negotiations September 28.
--	----	----	---

## SETTLEMENT OF DISPUTE AT LUSCAR COLLIERIES, ALBERTA

A QUESTION arose under the agreement between the Western Canada Coal Operators' Association and District 18, United Mine Workers of America, in connection with contract rates for pillar work at the Luscar Collieries, Alberta. As the representatives of the two parties failed to effect a settlement of the matter in dispute, they decided to refer it to an independent chairman, and they accordingly sent a joint request to the Minister of Labour, as provided by the agreement, to make this appointment. The Minister accordingly appointed Mr. James Smith, Edmonton, Alberta, to the position.

Early in October, the chairman delivered his finding in this dispute. He stated that the matter in dispute was in reference to payments made for coal taken from pitch pillars and entry or flat pillars, the coal in the former being conveyed to the car by chutes, while in the latter the coal will not run under normal conditions but must be shovelled. The operators offered to pay 70

cents a ton for coal taken from both pitch pillars and entry or flat pillars, the representative of the miners asking 85 cents a ton for pitch pillar work and \$1.05 a ton for entry or flat pillar work.

The clause in the agreement applicable to this dispute is as follows:

In making the prices for new work the Company shall be guided by existing prices in the same mine or other mines in the neighbourhood.
